

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + Make non-commercial use of the files We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + Maintain attribution The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + Keep it legal Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

CAPT. L. D. HINKLEY.

CHAPLAINS,

REV. HENRY DREW, (Prot.,) REV. FATHER SMITH, (Cath.)

ANNUAL REPORT.

Office of State Prison Commissioner, Waupun, Sept. 30, 1871.

To His Excellency, Lucius Fairchild,

Governor of the State of Wisconsin:

Sir—In obedience to provisions of law, I herewith submit my Second Annual Report, as Commissioner of the Wisconsin State Prison.

In my first annual report, dated September 30, 1870, I recited in detail the circumstances connected with the destruction of the Prison shops, and the steps taken to rebuild the same. I stated in that report that so much of the structure as I attempted to rebuild last year would be completed, the machinery in place, and in running order on the first of January following.

The result has been subtantially as I stated it would be, and but for the failure of parties to furnish machinery at the time fixed in the contract, would have been strictly so. Owing to the failure in getting machinery, as above stated, and to other unavoidable causes, much time was lost in the months of December, January and February, as will be seen by reference to table number two of tables accompanying this report.

The months of January and February were entirely consumed in preparing stock in the first stages of manufacture, the first sales of new work occurring about the first of March, making the actual running time in which the machinery has been in full operation only seven months, or from March 1st to September 30th.

I call your attention especially to this point, lest the work done in seven months should unintentionally be spread over the full year. The actual gain in chair and cabinet shop with machinery running seven months as shown by table "G" of appendix, is \$20,399.05. The gain in shoe, tailor and blacksmith shops for the year as shown by table "G" amounts in the aggregate to \$6,480.13. The building erected last year I found was entirely inadequate to the profitable employment of the men under my charge. To avoid crowding the men into too narrow limits, and a large loss of time for want of elbow room, I decided to employ a portion of the working force in extending the shop building to its original length. The building erected in pursuance of that decision is 160×50 feet, two stories high, with wing 20×22 feet, two stories high. This work has been successfully completed and the walls are now ready for the roof.

To accomplish this work has required the laying of 41,229 cubic feet of rubble wall, preparing 10,300 surface feet of fine pointed stone work, 2,200 surface feet of axed corners, jams, sills, etc.; and excavations, quarrying stone, filling, grading, and the usual number of attendants upon the masons doing the work, all of whom were prisoners, except one overseer and the superintendent of the building. I have contracted with Messrs. Letz & Co. of Chicago for the iron-roofing, to be completed on or before the first of December next. I have no hesitancy in saying that this building, when completed, will be, in point of convenience, durability and safety from fire, second to no shop building in this or any of the adjoining States. I have expended nothing for ornament, but have not hesitated to expend what seemed necessary to make it durable, convenient and safe.

The question, "can our State Prison be made self-sustaining?" may be fairly answered, I think by reference to tables Nos. 2 and 3, of Appendix. These tables have been carefully and accurately kept, and I trust will be carefully examined and considered.

The labor from which no revenue is derived and lost time from sickness and other causes (exclusive of those employed in shoe, tailor and blacksmith shops) is equal to seventy-six men for the entire year—leaving but 126 (our daily average being

202) men to do all the work from which revenue is derived, and in the construction and repair of buildings. The value of labor performed by these 126 men during the year, including gain in the several shops is \$41,913.58 or \$332.64 per man. The sums expended during the past year for current expenses and officers' wages amount in the aggregate to \$47,904.01, leaving \$6,090.43 the total cost of maintaining prisoners above the value of labor performed. The cost per capita of maintaining prisoners, including officers' wages, and exclusive of earnings, is \$236.65 or about 65 cents per day-nearly one-half of which is for officers' wages. An examination of the reports of nearly all the prisons in the United States satisfies me that the management, and financial results of the Wisconsin State Prison, compares favorably with that of the best. It is true, large appropriations are annually made for the support of the State Prison, and so long as a necessity exists for the erection of extensive buildings, on which is employed nearly all the labor of prisoners, must continue to be made. After the completion of the shop building now being erected, but little outlay in that direction will be required, unless the prison population shall materially increase.

If the time necessarily lost, so far as revenue is concerned, could be utilized and made available to that end, and if all those confined here were able-bodied men, I think the institution would be nearly self-sustaining. That it cannot be fully self-sustaining at present, is, I think, satisfactorily shown by the tables referred to, and by the fact that no similar institution in the United States is so, except where a much larger number of men are confined and employed, or where large sums are received from other states or the United States for board of prisoners, in addition to their labor.

The indebtedness for the current year is larger than I anticipated, and is somewhat increased in consequence of the building extension, cost of machinery and tools above the estimates in my former report, payment of interest on money borrowed of banks, loss of anticipated income, occasioned by the fire, and by the unavoidable delay in getting machinery adjusted and started last spring, thereby leaving on hand (as will be seen by reference to

the inventory hereto annexed) a large amount of stock which otherwise would have gone to reduce the indebtedness. The amount necessary to be appropriated for the ensuing year is as follows: To pay indebtedness September 30, 1871, \$24,589.47; for completion of building extension, including iron roof, \$10,000, and for current expenses and officers' wages, \$30,000.

With the exception of an epidemic which prevailed to some extent during the past winter, the health of the inmates has been good. As a rule the prisoners confined here, are, when received, broken down by dissipation or debilitated by long confinement in county jails, but under the sanitary regulation of the institution, most of them improve gradually, and after a time become comparatively strong and healthy. Two deaths have occurred during the year—one by sickness, and one by suicide. There have been no escapes.

I still adhere to the rule of kindness in the government and discipline of the institution. Good order has prevailed, and the conduct of the prisoners has been generally peaceful and obedient.

For the number of prisoners received, and discharged, and the average number in the prison during the year, I respectfully refer you to statistical tables numbers four, five and six. For information concerning the current expenses, financial exhibit, transactions of the different shops, and building account, I refer you to schedules "A" to "I" inclusive.

Permit me to again call your attention to the insane prisoners confined here, and to recommend such legislation as may be necessary to place them under care and treatment more suited to their unfortunate condition.

The female prison is now under the supervision of Mrs. L. Benjamin, who possesses in a high degree the qualities necessary to the proper discharge of her duties. Only two females are confined here at present. Circumstances beyond my control have compelled me to make a change in the offices of deputy warden and clerk. The deputy warden, Hon. C. S. Kelsey, seeks a wider field of usefulness in the west. That he may succeed beyond his most sanguine expectations is my sincere wish. For

the kindness shown upon all occasions, not only toward myself, but toward those under his especial charge, he has my hearty thanks. The clerk, Mr. D. B. Parkhurst, has engaged in railroad business at St. Paul. To fill the vacancies occasioned by these resignations, I have appointed Hon. B. H. Bettis as deputy warden, and Capt. L. D. Hinkley as clerk, both of whom are filling their respective places to my entire satisfaction.

The provision made by law for instructing the prisoners in reading, writing, and other branches of useful knowledge, is highly appreciated by those allowed its benefits, and shows the wisdom of the Legislature in providing even such scanty means of education. The school is under the supervision of the Prison Chaplain, Rev. Henry Drew, who takes a lively interest in the educational as well as moral instruction of the prisoners. For a statement of the result of his labors I refer you to the Chaplain's report hereto annexed.

In conclusion, I desire to express my thanks to the officers associated with me, for the interest they have manifested in the affairs of the institution, and for the faithful manner in which they have performed their duties. I am under many obligations for their efficient services.

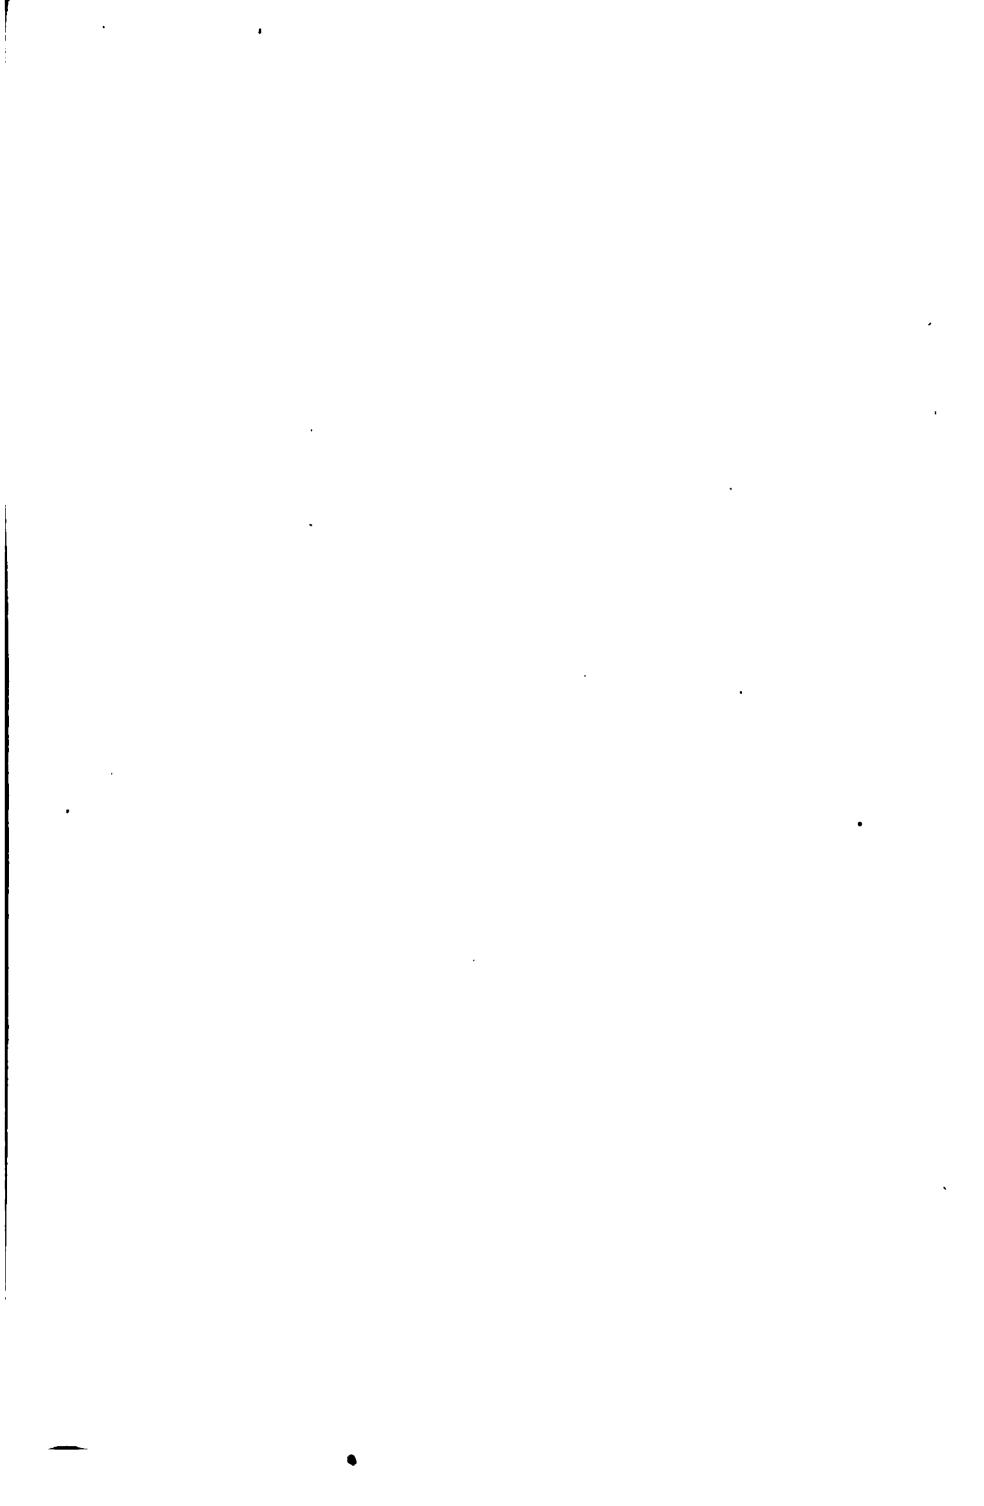

Very respectfully submitted,

GEORGE F. WHEELER,

State Prison Commissioner.

PHYSICIAN'S REPORT.

On the completion of another year, I respectfully present my report of the medical department of the Wisconsin State Prison.

The number of prisoners during the year was 290. The more important cases that have been under treatment were:

sthma	1
ongestive chills	2
atarrhal fever	50
Congestion of lungs	4
Diamhœa	20
Dysentery	6
Erysipelas	
ntermittent fever	
Neuralgia	
Consilitis	
Rheumatism	
Accidents—	
Fractures	6
Injuries by machinery	6
Amputation of fingers and parts of hand	5
Fall from building	1
Punctured wounds	$ar{f 2}$
Scalp wounds	4

These are not all the cases that have been prescribed for, nor were all these cases treated in the hospital, as many of them were of a mild character, requiring but little medicine; rest and diet being all sufficient.

There is scarcely a day passes, but there are applicants to the physician for some real or imaginary ailment or pain, which in their mind should exempt them from labor. Unless there is some derangement of the general health, or interruption of some functions of the body, it is oftentimes embarrassin; and presents a difficult question at the time to determine.

During the months of March and April an epidemic catarrh prevailed, and affected nearly every inmate in the prison.

There have been comparatively but little diarrhoea and dysentery, which is generally so common in the summer and fall months.

Two deaths have occurred since our last report. Wm. Smith, aged 33 years, of a scrofulous habit, died January 6th, of pulmonary consumption, having been sick more than a year; and Peter Frahm, a life member, aged 67, hung himself in his cell, March the 26th. He had at times manifested symptoms of insanity, and in all probability committed the deed while in this state of mind.

From the number sent here with debilitated, broken down and impaired constitutions by all manner of excesses, the hygienic condition of the inmates is very satisfactory.

The food furnished, is good and sufficient in quantity, of a wholesome and substantial character. The clothing is warm and comfortable.

I think the commutation law has an excellent effect on the conduct of the prisoners—a certain number of days each month is deducted from their sentence, for good behavior. The hope of pardon is expected by almost every prisoner, as soon as he enters the prison—this hope sustains him during his confinement, together with the commutation each month, induces a more faithful application to duty, and a more earnest effort to reform, and certainly has a very marked effect on the discipline.

The law consigns the convict to a restraint of his personal liberty for a violation of its act. The judgment of conviction is but a forfeiture of certain natural rights as a recompense to society for his inability to regard and obey those regulations, which have been established to protect community. By the present enlightened policy of prison discipline, the prisoner, while under punishment, is sought to be improved, benefited and reformed. In this, society has a deep interest. For if, at the expiration of his sentence, he is improved in his moral character—reformed in his habits, and taught those moral lessons of practical utility which will benefit him on his again mingling in society—community certainly has gained by his imprisonment. It has punished and improved a prisoner, and made an example and warning to those who would be disposed to violate the law.

We know that the management and discipline of the prison is just and humane, and the restraints of prison life are alleviated as much as is consistent with the objects of the law—and that self respect and improvement in the moral feelings are especially cultivated.

I am under renewed obligations to the Commissioner, Deputy Warden, and officers, for their assistance and kindness in the discharge of my professional duties.

H. L. BUTTERFIELD, M. D.,

Prison Physician.

CHAPLAIN'S REPORT.

In compiling this, my fifth annual report, I experience a commingled feeling of joy and gratitude far in excess of that of former years. At no period since my connection with this institution have the departments under my charge—both church and school—attained so high a standard as they now occupy. When I review the past and rehearse the present; when I see the fine mental developments constantly expanding, and when I realize that a large proportion of my scholars came to this institution with minds uncultivated or blasted by contaminating associations, and now witness, from that almost barren waste, new hopes, and better thoughts, and higher aspirations springing forth, that would beautify the more cultivated fields of human existence; I say, when I see and comprehend these facts, my lips can never give utterance to the question, "Can any good thing come out of Nazareth?" The number admitted into the prison school since its formation is 243. Admitted the past year, 63. Discharged during the past year, 20. Present number, 52. Classified, to-wit: 1 primer class, 1 second reader class, and the remainder in third reader. One class in geography. All study arithmetic except the primer class. All write. Justice compels me to bear witness to the untiring efforts of the teachers (all of whom are convicts) in elevating their more unfortunate associates to that stand-point where ignorance is no longer the parent of crime.

Since the organization of a church in this institution, there have been admitted to membership, and received the rites of Ohristian fellowship, 103. There have been honorably discharged, 62. During the past year have received to membership, 27. During the same time time have honorably discharged, 26. Now

remaining in good standing, 35. And I am happy to say there is at this time a good religious influence pervading the institution, and every week we witness the tear of some penitent wanderer, who in his night of sorrows has caught the radiance of Redemption's star, and is hastening to the cross of Christ, whilst like all other Christian associations, some few of them have grown faint and have loitered by the way-side; yet the greater proportion of them exhibit a firm determination to lead a new life, and I believe could we see their future, we should see them traveling that road which alone leads to the final home of God's chosen. Their faith in Christ, and their love of holy things, seem to daily beam brighter, and I can but believe that the majority of them will go to the world to occupy and honorably fill places of confidence and trust in Christian society. A commingled feeling of joy and sorrow takes possession of me as I gather about me these children of misfortune, and behold them bearing aloft the banner of Christ, never, as I firmly believe, to be laid down till they reach that home beyond the skies, where the bond and the free shall join hands in one common brotherhood.

Too much credit cannot be awarded to our worthy commissioner, for his co-operative and untiring efforts for both the moral and intellectual improvement of those under his charge, and to send them forth to society and liberty armed with firm principles, which shall fit them for positions of honor and trust.

HENRY DREW.

Chaplain.

TWELFTH ANNUAL REPORT

OF THE

WISCONSIN INDUSTRIAL SCHOOL FOR BOYS,

For the Year ending October 10th, 1871.

MANAGERS' REPORT.

To His Excellency, Lucius Fairchild, Governor of the State of Wisconsin:

The managers of the Wisconsin Industrial School for Boys, in obedience to the law, present this, their annual report, for the year ending October 10, 1871:

The number in the school at the commencement of the year was— Boys	
Girls	
Number received during the year	
Boys	
Whole number in school during the 'year'	288
Whole number in school since July, 1860	779
Returned to parents on ticket of leave	30
Boys	
Escaped— Boys Term of commitment expired—	6
BoysFully and honorably discharged—	1
Boys. Deaths Number in school October 1, 1871—	1 3
Boys	239
	288

Our expenses for the year ending October 10, 1871, amount to \$32,387.95, which amount has been disbursed on the following accounts:

Improvements and repairs	\$2,011	49
Furniture	319	82 -
Fuel and lights	1,953	75
Grain, flour and feed	3,052	
Groceries, crockery and glassware	3,473	43
Fruits and vegetables	114	61
Farming implements and seeds	276	68
Hardware	693	60
Blacksmithing	360	82
Dry goods	1,685	92
Woolen goods	2, 156	71
Books and stationery	494	21
Drugs and medicine, and medical service	256	19
Postage, revenue and telegraph	156	04
Insurance, freight and express	351	24
Leather and findings	1,036	82
Willow and broomshop	750	49
Paints and oil	223	96
Railroad and livery	36	00
Live stock	340	00
Salaries and labor	10,083	92
Printing	22	50 ·
Miscellaneous	1,036	83
Meats		
Managers	428	
-		

The board of managers are gratified to call the attention of your excellency to the thriving and prosperous condition of the Industrial School in all its departments. Never in the previous history of the school has there been so much in its condition to afford pleasure, and so little to cause pain. The permanent reformation of a large proportion of our inmates may be regarded as secure, while of those remaining, a large majority are in a hopeful condition, leaving only a small number of whose future welfare we have more fear than hope. This school has now been in operation long enough to have demonstrated (under ordinary circumstances,) its capacity or incapacity to accomplish the objects contemplated by its creation. It will be remembered that the whole subject of reformatories is comparatively new to this country. Divers systems are adopted in different states and advocated by those who are interested in the examination and discussion of them. Those who were most interested and active in originating and organizing this school, had no fixed opinions as

to the various systems presented for their approval or rejection. They saw and felt the necessity for some action on the part of the state authorities, but as to what particular shape it should assume, they left to the judgment of those who should be placed in immediate charge of the school. The congregate was the system first adopted. Before the number of inmates had become sufficiently large to demonstrate the necessity for a change, our school building was destroyed by fire. The whole subject then came up for examination and decision. The managers and superintendent visited the Chicago Reform School in a body; some of them visited other institutions of a like character. After giving the matter the attention demanded, and consulting with those who were regarded as best informed, it was decided to adopt the family system. This decision was unanimous, and no one has thus far seen good cause to regret it. Time, reflection and experience have only confirmed the wisdom of the course adopted by the board at that important period in our history.

We have labored under a great many embarrassments, difficulties and discouragements, impossible to be more than alluded to within the limits of a report which any one could be expected to read, and entirely inappreciable by a person who has never been connected with an institution of this kind. We do not mention these things as subjects of complaint, but rather as cause for congratulation. They are, we are glad to say, principally of the past, and grew out of the condition of the country; our own want of experience, the war, burdensome taxes, want of knowledge of the demands of the school among the people, the rapid increase of the number of inmates, and numerous other causes which have to a considerable extent disappeared or been greatly modified. These, among other things, have, until within a recent period, retarded and embarrassed the best efforts of superintendent and managers, and indeed of all who were really interested in the reformation of our inmates. We now have a good farm; large enough, conveniently located, susceptible of a high degree of cultivation. On it we are educating a class of boys who will yet prove successful tillers of their own soil and good citizens. We have workshops, such as become a state mindful of the rights and wants of its juvenile delinquents, and we will turn out of them good mechanics, with such skill and habits of industry as will inspire confidence and respect everywhere. We have good schools that will compare well with the public schools of the State. Our pupils, when their antecedents are considered, will not suffer by comparison with those of the same age in our public schools.

We have, the most of us, been connected with this school so long that it has become to us a matter of absorbing interest. We have seen it in its infancy, barren of results, when we had no roof to shelter the poor boys, no school room, no play room, no shops, no conveniences or comforts. Now all this is changed and the results are becoming commensurate with the change. We now are gratified to see intelligent people from our own and other States, and to hear them express themselves so agreeably surprised at the magnitude and the prosperous condition of our It is a surprise, almost without exception, to visitinstitution. ors. We could give references that would justify all we say, and more, but will only add here, that among the State Board of Charities we heard enough to justify us in saying thus much, and the President of that Board will verify this, we are sure. For the first time in the experience of the present board of managers we can present our annual report, without asking for any extraordinary appropriation for building purposes. We think we can get along another year without such an appropriation. have endeavored to build substantially what we have built, with reference somewhat to the future as well as the present wants of the school; this has not always been done, and the result is our restricted accommodations in the school room and chapel.

We point with pleasure to our health record of the past year. We think the character of the locality on the score of health may be regarded as safe and settled. The deaths among the inmates for the whole time since the date of organization in 1860, have not amounted to one per cent. of the whole number of inmates. The three boys who have died during the last year were invalids when sent here, and physically unfit to be admitted except as hospital patients. One at least had been pronounced in-

curable by his physician; the others were really in the same condition, and beyond the reach of the most strenuous efforts to restore them. The office of Physician to our family of nearly three hundred boys has not recently been very remunerative. We are indebted for this somewhat to the fact that our physician is not a salaried officer, but only called upon in case of actual sickness, and to the other fact that our matron is a first-class nurse, with considerable knowledge of medicine; and it is but simple justice to say here that to the faithful and untiring efforts of the superintendent and matron, more than to anything else connected with the management, do we owe the abundant success that is now apparent in all the departments of the institution.

Since the date of our last report we have introduced a new branch of industry, admirably suited to the capacity of small boys. This is cane seating of chairs, etc. It furnishes employment to a large number of boys who could hardly be employed in any other business. It is not hard work; does not over tax their immature physical powers, and yet nothing can be better calculated to induce habits of active, patient industry, and close attention to business. The fact that this work is done for the state prison is to be commended; it is work for the state by the state; there is no temptation to do wrong in any way. reference to the report of the superintendent it will be seen that suitable employment is now furnished for all classes of boys in the school. The broom, the willow, the shoemakers, the tailors, the carpenters, the painters' shops, the farm and garden, the laundry, and the bakery can one or all furnish means to develop and engage all the ability for exertion in such business that is adapted to the capacities of different boys in the school. We have never been, able to say this before, and are the more gratified to say it now. We need not now permit our boys to nurse their vicious tendencies by compulsory idleness.

In the planning of the main building in which the school room (used also as a chapel) is situated, sufficient regard was not had to the prospective increase in the number of inmates, and we are without a room of sufficient capacity to accommodate our whole school. This difficulty will continue to increase until some plan

shall be found necessary to remedy it. It might have been prevented; now it remains to be cured in the future. We are often asked if the school is self-sustaining; the answer, of course, must be a very decided negative. Our boys average less than fourteen years of age; they have inherited neither good health nor good habits; their education has only aggravated their inherited evil tendencies; while this is generally true we have exceptions, but not in sufficient number to affect the general truth. The boys are sent here for reformation, to be taught the practice of virtuous industry, to be improved in their moral and intellectual as well as physical natures; they are diseased in all these respects; and they are not sent here to be punished or made money out of, or money to be made out of them by a direct cash return to the treasury of the State for their labor in the field and workshops.

We think a very little reflection will satisfy any person that pecuniary profit is a small matter to be considered, when canvassing the merits of an institution like this. It is not our habit to present to visitors our books for examination, to show how much money is realized from the labor of our boys. We prefer to take them into the school, the field or the workshops, and the playgrounds, to exhibit them as objects of the fostering care of the State, sent here for a time away from their evil associations, to be returned to society fitted for loyal, industrious, and virtuous members of the commonwealth. This is our view of this matter. Where is the man who would take any number of these boys of the tender age of the average of them, with their habits, and feed, clothe, nurse and educate them (as the State is doing) for their services alone? We think the man who would promise to do it would be the last to comply with the promise. If the prisons of the country do not generally prove self-sustaining, where only adult criminals are kept, and labor is the penalty of their crimes, how can it be expected of boys barely in their teens, to sustain an institution which makes pecuniary profit only a secondary, not a primary consideration? This is too plain to need further discussion; but this much is said for the reason that so many seem to think that money-making is a means of reformation if not of grace.

In our last annual report we asked for \$16,000 for the erection of another family building, and an appropriation was made of that amount by the legislature last winter, to be paid in 1872. We needed the building at once. To wait for the money to be paid to us would set us back one year. We proceeded to erect the same and have it now nearly completed. We think it a decided improvement on those heretofore built, and its cost will not exceed the amount appropriated. Much of the cost of erecting the same has been paid, and the bills are in our hands, but we do not get our money from the state until next winter, when all the bills will be paid. It will be seen by the report of our treasurer that no account thereof is rendered. In our last report we also asked for \$4,000 to purchase forty acres of land, which sum was appropriated. On making the survey it was found very desirable, on account of the frontage, to have ten additional acres, and to bring our land in good shape, we purchased the fifty acres, at a cost of \$5,000, and the deed thereof was deposited with the secretary of state. Improvements of a substantial character have been and are being made which will be of lasting benefit to the institution.

We estimate our wants for the ensuing year to be as follows, viz:

For current expenses. Deficiency on land purchase Extra improvements To purchase instruments for band. Cooking apparatus for kitchen.	1.000	00 00 00
From which deduct amount due from counties		

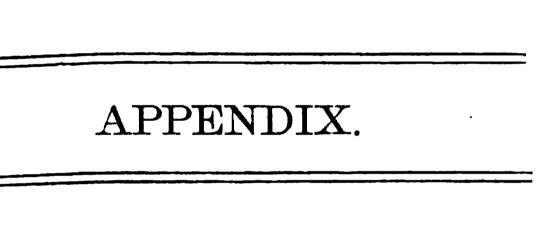

\$600.00, the most or all of which we will want in furniture for the various buildings, some of which have been scantily supplied heretofore. We have due on accounts and in manufactured articles ready for sale, some \$1500.00. With the help of these sums we expect to be able to get through the coming year, unless our numbers increase more rapidly than we calculate upon.

We republish the laws relating to the Wisconsin Industrial School for Boys, for the information of all interested.

EDWARD O'NEILL,
E. HURLBUT,
W. BLAIR,
A. E. ELMORE,
C. R. GIBBS,

Managers.

WAUKESHA, Oct. 10, 1871.

Leaves balance of	\$2,046 15
Due from counties. \$53,000 00 Appropriated, 1871. \$53,000 00 Less to be paid in 1872. 16,000 00	• • • • • • • •
Makes a total of	\$44 ,274 15
Paid for current expenses—1st quarter	•••••
Leaves balance of	\$11,886 20 5,000 00
Received proceeds of shops	\$6,886 20 1,895 65
Leaves	
In all	\$24, 781 85

To pay for the building now nearly completed, and for current expenses to 31st December, 1871.

ANDREW E. ELMORE,

Treasurer.

SUPERINTENDENT'S REPORT.

Wisconsin Industrial School for Boys, Waukesha, Oct. 10, 1871.

To the Board of Managers:

GENTLEMEN:—The whole number of inmates in this institution since it was opened in July, 1860, is 779. Of this number 73 have been girls and 706 boys.

By reference to former reports we find that in

861, the number of inmates was	39
862 do do	5 5
863dodo	73
864dodo	137
865dodo	155
866dodo	
867 do do	
868dodo	_
869dodo	
870dodo.	
871dodo	_

From this it appears that the school numbers 200 more to-day than it did ten years ago. And also, that the number has steadily increased each successive year, except the year of the fire, when our accommodations were limited.

Total	6, 056	00

Whether the policy of charging each county one dollar per week for the care and maintenance of the inmates committed here, for vagrancy and incorrigibility, or whether this like all others, should be a state charge, is a matter for our legislature to consider and decide. It is certain, however, that there are objections attending it—among which are the following:

To save a direct tax on the county, a lad is often allowed to run at large long after the community and the magistrates are convinced that he ought to be sent here, waiting for the detectives to convict him of some criminal act; such a time is sure to come sooner or later. He is now a worse boy than he was when he should have been sent; the labor of reforming him is increased, and what is worse, he is branded with criminality. This is evi-

dently poor policy, so far as the reform and future reputation of the boy is concerned, and it is questionable whether the practice is not equally so financially.

DOMESTIC RELATIONS.

If a faithful history of the domestic, social and moral condition of our inmates previous to entering the institution was written up, it would fill volumes—volumes of sad and significant realities. Of the 288 inmates on record this year, only 113 have both parents living, 51 are orphans, and full forty per cent. of the remainder are half orphans. The parents of four are insane, the parents of 30 have separated, 34 fathers and 7 mothers are known to be intemperate; 41 of the inmates have step-fathers, and 40 have step-mothers. Many who have had homes nominally have been in a worse condition than those positively homeless.

It is not surprising that boys thus situated, without employment, and destitute of parental control, should become truants from school, addicted to profanity and falsehood. What but liars and thieves could they be expected to become? Destitute of clothes, suffering with hunger, pinched with cold, exposed to corrupt associations, surrounded by bad examples, with few elevating influences; they have lost self-respect, become lawless, and fallen into crime. It is true that some who have had comfortable homes and kind friends have strayed away from whole-

some restraints, and under the influence of vicious companions have become incorrigible.

To every reflecting mind these facts present their own comments, and carry their own convictions. From no other stand point can the work to be done in this institution be viewed to better advantage. We are here shown, whence came the material from which the man and the citizen is to be moulded. If we are asked "can an evil tree bring forth good fruit?" Our reply is, the fruit of trees may sometimes be improved by cultivation. Pruning, budding and grafting are means to accomplish this end. Very like these are the means to be employed to produce honest and worthy men from children whose parentage has been such as the above facts indicate. It is a noticeable fact that we have two classes of character to deal with. The one inherited proclivities to wrong, the other has acquired such tendencies—the former are naturally vicious, the latter were made so by bad associations—in the former it is hereditary, in the latter, it is the result of unfavorable surroundings; in both when continued, it becomes a confirmed habit. It is a pertinent question for the present enlightened generation to solve, whether even the criminal acts of youth, whose antecedents have been such as described above should be treated and punished as common criminals. This furnishes a theme for the philosopher, and a field of labor for the philanthropist and the Christain.

GENERAL MANAGEMENT.

The foregoing tables and remarks relate principally to the condition of the inmates previous to and at the time of their connection with the school. I now desire to call attention to the disposition of the boys after they enter the school, and to the general management of the institution.

A very natural division of our general work will resolve it into four departments. The first relates to the inmates' homes; second to their employments; third to their education, and the fourth to their moral standing.

Home Department.

Our first duty on receiving a boy is to furnish him a home. He must have food, clothes, lodging, personal care, in short all the attention and care needful in any home where parents and children live. It is our object to make our "family" arrangements as near like those of a well regulated family, where father and mother preside, as our circumstances admit. At present the inmates are divided into five divisions or families, each occupying a separate building. Each of these family buildings has its general sitting room, bath-room, dining hall and dormitory. It has also separate apartments for the accommodation of the family offices.

Each family is under the supervision of a man, who looks to the general conduct, health and comfort of his boys. His duty requires him to be in the building with the inmates when they are there, both day and night. The care of the internal arrangement and management of the house, and of the boys' wearing apparel, is in the hands of a woman who spends all of her time in the building. The man and woman above named are known as the family officers, and, so far as their relation to the inmates is concerned, are each emphatically in loco parentis.

At the present time the number and supervision of each family are as follows:

```
Family One numbers 47, and is in charge of J. W. Babcock.

Two...do....52,.....do....R. F. Farrington.

Three..do...53,.....do....A. B. Todd.

Four...do...41,.....do....B. B. Monroe.

Five...do...44,.....do....J. Korn, Jr.
```

This, it will be perceived, is an overcrowded state of the family buildings. We anticipate relief as soon as our new building, now nearly completed, is in readiness for occupation. To relieve the dormitory, we have of late slept several of our boys in the band-room, and in other apartments where a bed could be set. Two live with the farmer in the farm-house, and two are allowed to work for and live with neighboring farmers.

Employment.

After home provisions are secured for a boy, our next attention is directed to the employment. If it was ever a question here whether work or education was first in importance, it is so no longer. We are fully convinced that good business habits, with a moderate education, is better capital for a young man than a school-book education without habits of industry.

The aim of the managers for years has been that every boy in the institution should have a business and a place of business. This end was never successfully reached until the present year. By the addition of our shop buildings, and the consequent development of shop work, especially of the cane seating, we have been brought to realize what we have long most ardently desired. We are now able to furnish every inmate with employment suitable to his age, health, strength and capacity.

Division of Time.

Nine hours of each twenty-four are spent in school and work. During the winter the time devoted to school is five, that to work four hours. In summer this order is reversed, thus making the average time spent in school and work equal for the year.

The small children's work time is one hour less per day.

In summer, inmate	es rise at	5.30
	retire at	8.00
In winter, inmates	rise at	6.00
	retire at	7.30

From the above it will be observed that nine hours of each twenty-four are devoted to active employment, about the same to sleep, and some six hours to meals, reading, devotional exercises and recreation.

A few of the teamster and farmer boys are kept out of school to work the entire day during the busy season.

THE ROMOTHE OFF-OL-MONE	_

Shoe Shop.

220

TABLE No. 11.

		Made.	Mended
Number pairs of	brogans boots (calf). boots (cow hide) shoes (calf): bootees (calf) slippers (calf) misclaneous	36 18 5 17	1,808

The work done in the shoe shop is principally for the use of the inmates. I am of the opinion that arrangements can be made for enlarging the amount of our sale work. We have a better supply on hand of better made shoes and boots than ever before. Our shoe shop does not furnish employment for a large number of boys, but in the aggregate of years, is doing its full share of work in fitting the young men of our school for the useful employments of life.

Tailor Shop.

TABLE No. 12.

		Made.	Mended.
Number pairs of	woolen pants	242	2,772
-	cashmerette pants	149	925
	woolen jackets	262	830
	cashmerette jackets	142	457
	denim blouses	14	
	denim overalls		43
	vests	2	
	sack coats		
	woolen caps		17
	bags		
	aprons		

The tailor shop, like the shoe shop, is mostly employed with work for our own consumption, and has, for the first time in the history of the institution, succeeded in producing a good stock of ready made clothing, in the fall of the year, in advance of the demand. Some improvement is noticeable in the style of the work this year; especially is this true of the jackets and caps. If the tailor shop could be put in condition to do more outside work, it would, like other shops, be a moderate source of income, and what is quite as desirable, would enable the boys who desired to do so, to perfect their knowledge of their trade by practice on finer work.

Willow Shop.

TABLE No. 13.

Number of	reticules
	common market baskets
	clothes
	round dinner do
	skein marketdo
	potatoe do
	potato on do 38 skein corn do 29
	sewing standdo
	infants sewing stand
	foot stools
	large cradles
	large chairs, (fancy)
	sewing chairs
	childrens' chairs of all kinds
	high stools

The willow shop this year has for the first time had a fair chance to do work to advantage. I think the result will show that this branch of industry is capable of being conducted with success. It is not yet developed in productiveness in accordance with its capacity. Some attention is needful directed to this end. The character of our willow furniture is creditable alike to the foreman of the shop, the boys who do a portion of the work and to the institution.

Cane Shop.

TABLE No. 14.

Number seats caned	4,745
backs caned	702
seats or chairs recaned	14

Except the last item of recaning, the above work has all been done for the State Prison. This shop was put in operation some aix months since. It is our second attempt to start the business of cane seating. The first failed when the fire consumed our shops. The second effort is a complete success. It is an admirable business for our purpose; first, because it requires no capital to carry it on; second, because it is completely adapted to the capabilities of small boys. It is healthful, light and admirably fitted to cultivate activity and skill.

Broom Shop.

TABLE No. 15.

Number of brooms manufactured.

No. 12 brooms	lozen)	119
No. 10do	.do	157
No. 8do		
Broom brushes	.do	7

In addition to the above, fifty-seven and a half dozen brooms have been manufactured for outside parties.

This shop has not been running since June, on account of the slow sale of brooms. The broom shop boys have planted, cultivated and harvested the broom corn crop of this year, and spent

the balance of their time on the farm and making improvements in and around the new building. It is worthy of remark that this company of boys have done this outside work with one of their own number promoted to the position of overseer, who has been employed at moderate pay during the summer.

Knitting Class.

Number pairs of	socks knit	301
_	socks footed	26
	suspenders knit	313

This company of little workers number some twenty or twenty-five. They are in charge of one of the female teachers. They work about one and a half hours each half day. We consider this much better than idleness for the good of the boys, and by their industry the inmates are supplied with woolen socks and suspenders. The class consists of the smallest boys in the school.

TABLE No. 16.

Laundry.

Number of	towels washed and ironed	5, 703
	pillow casesdo	13,496
	sheetsdo	11.843
	shirtsdo	
	apronsdo	1,448

		193
	bed-spreadsdo	345
	bed-ticksdo	
	blanketsdo	182
	dressesdo	405
	drawersdo	851
	pantsdo	384
	handkerchiefsdo	2,542
	napkinsdo	167
	linen coatsdo	558
	night dreseesdo	237
	chemisedo	497
	pairs stockings.do	9, 115
	white skirtsdo	627
	collars and cuffs.do	1,199
	window curtains.do	63
	capsdo	200
	woolen scarfsdo	250 250
	WOULCH SCALIS GO	200

Our new laundry is a complete success. I doubt whether its equal for convenience, economy and efficiency can be found in any institution or hotel in the country, where the work is done by hand. The drying apparatus is one of its excellencies.

We have had no lack of soft or hard water even through this long and severe drouth.

In-door Work.

A large portion of the work in the kitchens, dormitories, dining room, bakery, laundry, &c., is done by inmates. A force of about thirty boys is employed to carry on the various branches of household business.

Sewing Department.

This work was formerly done by a seamstress and class of girls. It is now done by the female employes, principally those in charge of the family buildings under the matron's supervision.

THE GIRLS.

As stated in table No. 1, we have still two girls, one of whom resides in my family, as she has for several years. The other has been out to a place, but for sufficient cause, returned. She is now waiting, that a suitable home may be found.

Another year has passed, and no provision has been made in our state for delinquent girls. I feel it a duty to call attention from year to year to this needed provision. I hope the forthcoming legislature will not close its session without giving the subject due consideration.

FARM.

The fifty acres purchased this year has not only added area, but has given shape to our farm. We are better satisfied each succeeding year with our farming department. While it does not contribute a large revenue, it is perhaps as well adapted to our necessities as any branch of business that can be introduced and worked by boys. It should be borne in mind that to conduct any kind of work successfully, and do it with a company of boys whose native propensity to destructiveness has been strengthened by years of idleness and dissipation, is not a very promising undertaking.

Any practical man, who will take into consideration the tools and machinery that such a company of boys will destroy by carelessness or design—the total or partial failures of the well-planned enterprises, occasioned by superficial work or careless neglect, that will inevitably occur during a year—and he will, I think, be both modest and moderate in his estimate of results. If any further consideration is needed, it may be found in the fact that the supervision of both the work and the workers must be entrusted principally to hired overseers. The farm is, perhaps, more liable to this class of difficulties than other departments, on account of the extended area to be supervised.

Notwithstanding these difficulties our farming enterprise is a success. It affords an abundance of healthful, open air exercise to a large number, many of whom will go forth to till the soil and help forward the agricultural interest of the country. At this season of the year some portion of the farm products can only be estimated.

TABLE No. 18,

Shows the products of the farm this year.

Wheat	20 acres, bushels	57

		Ö
		Ŏ
	loads	_
•		=

The farming land has been thoroughly cultivated and kept entirely free from weeds. We have drawn on 200 loads of manure and would gladly have used ten times as much more if we had it.

STOCK.

The stock belonging to the State consists of horses, cattle and hogs.

Horses.

Liorses.	
Two farm teams One road team One dray horse One buggy horse	2 1
Total number horses	8
Cattle.	
Cows Beef cattle Two year old Yearlings Calves	4 6 8
Total	
Will leave to be wintered	82
Hogs.	==
Fatting	. 10 . 50
Total number of hogs	91

Our conveniences for care of swine up to this time have been poor indeed. They have been without sufficient clover pasture and with scanty shelter. And as all the cows' milk is used in the kitchen and on the boys' tables, the small pigs have not been furnished with food suitable to their growth. With the new piggery, now nearly completed, with the steam cooking apparatus to be supplied, we shall hope to present a more favorable showing in this direction the coming year.

GARDEN.

An area of nearly fifteen acres is under the supervision of the gardener. About ten acres are devoted to garden vegetables, two to small fruits and nursery purposes, and three to the growth of osier willows.

TABLE No. 19.

Shows the principal products of the garden.

Vegetables.

Beets,bushels	200
Onions,do	8

Fruits.	
•	
Apples, bushels	. 6
Raspberries,quarts	. 176
Strawberries,do	. 144
	==

Several hundred currant bushes are standing and have received much attention, but they have produced very little for the past three years.

To the above might be added a fair supply of pie plant, asparagus, celery, lettuce, &c., with a good stock of garden seeds for the coming season.

The garden has been improved by deep and thorough tillage, and 75 loads of good manure.

NURSERY.

Believing it will meet the approval of our Board of Managers and of the friends and supporters of the school generally to adorn the grounds with ornamental and shade trees, not only near the buildings but to some extent around the entire farm, I have for several years been sowing seeds, planting slips, and transplanting small trees as occasion offered, with trifling expense, to grow up a supply to this end. We have now in healthy growing condition nearly five thousand such trees, ranging from one to three years growth, in number of each as follows:

White Cedar	194
Balsam of Fir and Norway Spruce	741
Elms	
Maple, (soft)	250
Maple (hard)	600
Mountain Ash	200
Willow (yellow)	50
Larch	
Balm of Gilead	
ACTION OF CHANGE IN THE STREET OF THE STREET	VIO

EDUCATION.

Our institution is known as a school. It is such most emphatically. In the work department even, more attention is directed towards teaching a boy how to do things, than to secure any other one result. By such means we aim to develop, draw out and discipline his faculties, and thus fit him for a good citizen. But our school department is a school proper, and as such we are sparing no pains to make it equal to any in the State. The common branches of English education are taught. While we do not attempt to teach higher mathematics, natural science, or the classics, as they are taught in the high schools, we do teach physiolygy, history, analysis of the constitution, and by familiar lectures and general oral exercises, acquaint our pupils with many of the leading facts of astronomy, geology, zoology and similar subjects.

3-Ind. Sch.

For particulars relating to the schools, allow me to refer you to the teachers' report hereto annexed.

It is a matter of regret that in our teachers' corps changes are This results principally from the fact that teaching so frequent. in our school is work. It is work to govern, work to secure and keep up an interest in the classes. Our pupils, before they were placed under our charge, had been trained in the street school. Application to books is by no means congenial to their na-The process of study is too slow, too quiet, and too void of excitement, to suit their impulsive dispositions and vitiated Hence the teachers find it an earnest business to keep order, and make the school a success. We have few and short vacations, (and they are only nominal). Each week has seven days with us; hence, as I said, teaching is work in our institution, and of course persons who have chosen their profession with the expectation of an easy time, are disappointed and must change. At present no cause of complaint exists. All the departments are progressing harmoniously and efficiently.

I should add, perhaps, that our school rooms are full to their utmost capacity, and if our numbers continue to increase as in the past, we shall soon need additional room for school purposes.

BAND.

The band was first organized in April, 1869. It consisted of sixteen boys. They had for instruments thirteen brass horns, furnished the school by the kindness of Governor Fairchild. We have added a bass drum, a snare drum and a pair of cymbals. From the nature of our school the members of the band are frequently changing; only two of the original members are now members, although some forty different boys have been connected with the band during the two years and a half of its existence. Our present band is quite as efficient as any we have ever had. Mr. Cyrus Alsdorf has been band teacher since last March. Less time has been given to the exercises than formerly. Mr. Alsdorf has thrown the band upon its own exertions to a great extent, and with marked success. We consider the band a credit to our school. A new set of instruments is needed. Those we

have have been through the war, are much worn, need frequent repairs, and are hard to blow.

LIBRARY.

About 200 volumes have been added to the library by purchase this year, and some ninety by donations, making in all something over 700 volumes. The library includes Chambers' Encyclopedia and a number of valuable books. The most of the books are small, and being read so constantly, and handled by so many, are much worn. An addition of a few hundred well selected books would be very acceptable to our best boys, and be highly beneficial to the interests of the school. As a rule the boys of our school read very much more than the generality of boys in the community. A good library would be a powerful auxiliary in our work.

Added to the above the following periodicals are regularly distributed:

ild's World	

IMPROVEMENTS.

The sum of our improvements and additions this year is quite worthy of notice.

First, the land purchase alluded to before. This has consolidated the former purchases, improved the shape of the whole premises, given frontage, and furnished desirable building sites. Second, the fence on the east and the north line. It is over

three-fourths of a mile in length—a board fence with cedar posts. It is made for service, and will stand inspection, wind and weather. Third, the new family building. This is the best built structure on the premises. It was an indispensable improvement and will be filled with inmates the day it is ready to receive Fourth, the piggery. This is a two-story structure, 75 by 30 feet, and notwithstanding its uncomely name, is worthy of mention. It only needs to be seen to be commended. Fifth, the pipes by which water is carried from the reservoir across the main yard, under-ground and below frost, to be distributed in the family buildings. Sixth, the repairs in and around No. one and No. two buildings. This consists in part of painting the inside woodwork and a portion of the walls, but more especially the repairs of the conducting pipes for the rain water, and the replacing of the worthless clay tile by iron pipe and cement tile. Seventh, the substantial gravel-grade road from our front gate north to the river and east to the village line. More than six hundred loads of gravel have been drawn to do this, and the grading in and around the piggery; and last, though not least, is the removal of the dead timber from the grove. The trees have been grubbed up, reduced to stove-wood, and the ground cleaned off and in good shape. Our beautiful grove is thus made more beautiful.

Several other less note-worthy improvements might be named, such as the removal of debris, leveling off the front grounds, shaping up the yards, removing, changing and repairing fences, etc., etc.

MORAL TRAINING.

Having spoken of the homes, the employment and the education of our pupils, there now remains to be considered the higher and paramount duty of all involved in our work, and, for the want of a better name, have called it moral training. This I consider the ultimatum of our mission; all others must be directed to and center in this. The home arrangements, the educationa facilities, and all that pertains to the work department must have a direct bearing upon the future manhood of these sons of Wisconsin.

However well all these formerly considered interests may be managed, there is still a work to be done. Though the object of their reform is promoted by these, the end is not reached. The drill, the chisel and the hammer are indispensible to quarrying and shaping the rough marble, but other means are requisite to polish and perfect the statue.

Great care is needful just here. The rough chiseling and hammering by the quarryman often render the sculptor's work a difficult one. It is a nice question often just how much to do, as also just when to do it, and with what tools or means the work had best be done. Care, caution and experience are demanded.

If it requires skill and judgment to temper and shape the steel to make a good cutting instrument, how much more to temper and shape subtle humanity to make a good citizen.

To accomplish this end we endeavor to call to our aid all the facilities which we are able to command, and draw upon every cord that vibrates in the being of him whose character we are seeking to form. We aim so to shape all the moral forces within our control that every good impulse of the young mind and heart shall be called into requisition. Hence we appeal to his honor, his manhood, and his conscience. To his interest, his comfort, his hopes and his fears. To his love of self, of his friends and his country. We endeavor to stimulate him to well doing by encouragements, by privileges, by hope of reward, of usefulness and honorable position in society, and by a sense of duty to himself, his fellows and his Maker. We seek to restrain his tendencies to wrong, by loss of privileges, by discomforts, resulting directly from his cwn acts, and by a consciousness of the ultimate consequences of wrong doing; thus enforcing upon him a sense of the great truth taught by nature and revelation, that the way of the transgressor is hard.

To secure these results in a practical way, constant attention must be given to all he does and all he neglects to do. His attention to his studies, his success at work, his character for fairness and honor on the play ground, his care of his clothes, his books and his tools must all be subjects of merit or demerit. To bring all this into a tangible form, each boy is placed in a grade

indicative of his standing. All his misdoings worthy of record are written out and his grade is written up on the first and middle of each month. This system of grading in our school is the fulcrum on which our disciplinary forces act. The gradebook is our "book of remembrance written." To this we refer the Board of Managers and the boy's friends to learn his present standing and the steps by which he has attained it. We refer to the grade-book to know who are werthy of positions of trust or entitled to special privileges, as well as who are deserving of ticket of leave or entitled to final discharge. The boy enters the school in the fourth grade, below this are fifth, sixth and seventh grades, which are grades of punishment; above this are the third, second and first grades, and the "grade of honor." In honor, a boy may rise any number of degrees corresponding to his number of grade times, showing a clear record. It is seldom that a boy wholly disregards his standing as shown in the gradebook. When he does, solitary confinement for a limited time and "thorough work" are the means usually employed. Corporal punishment is not totally ignored, however much we desire to dispense with its use. In conclusion, on this subject, I may say what affords me much pleasure to say, that the standard of discipline is milder and higher at this time than at any period during the six years of my acquaintance with the school.

CONCLUSION.

With these records we close our duties for another year. It has been a year of prosperity, filled with earnest work, and made memorable by many interesting events. The health of the officers employed, and inmates, has been good, except during the first few weeks of the year, when the typhoid fever prevailed in the country, and several cases occurred in the institution. We were called upon to follow to the grave one of our much esteemed teachers, Miss Emma Sperry, and three boys. Miss Sperry was young and not possessed of a strong constitution. She was earnestly devoted to her work. Her gentle and winning manners secured to her the friendship and respect of all who knew her.

Two of the boys that died had been here but a few weeks, and

were invalids before they came. The other one had been an inmate a year; was of consumptive habits. All three had the typhoid fever, passed the crisis, but had not the vitality to rally. The hospital for three-fourths of the year has been without an occupant.

A kind Providence has guarded our interests, supplied our necessities and kept us secure from the ravages of disease and the destroying elements that have been permitted to lay waste a portion of our own and neighboring states.

It affords me pleasure to acknowledge the kindness of our many friends who have cheered us in our work by words of encouragement and approbation. To editors, publishers, the donors of books and papers, clergymen and other public speakers, and especially to the many faithful and earnest Sunday School teachers who have so effectually aided us in our arduous duties, I desire to express my sincere thanks.

It affords me pleasure also to acknowledge the fidelity of my associate officers, some of whom have served the institution several years with merited approbation.

With grateful acknowledgements of the continued forbearance and cordial support of the Board of Managers, I most respectfully submit this, my sixth annual report.

A. D. HENDRICKSON,

Superintendent.

Civil Government is taught by topic, as an extra exercise.

This department is divided into forms for declamation and reading essays. First form occupying morning session one week, and second form next week, making an exercise for each week.

In consequence of the frequent change of teachers during the year, the boys have not made such advancement as we could de-

sire. In addition to this, if we take into consideration the low grade of scholarship when they enter the school, and that they are entirely unused to mental labor, knowing comparatively nothing of books, as untrained in their habits of thought as in their behavior, their lack of proficiency will be better understood, as will the difficulty of bringing into healthy action such undisciplined faculties as theirs. These habits must be overcome. A love for study must be implanted. Notwithstanding these disadvantages, I am glad to be able to say that the efforts of those engaged in the school have not been fruitless, and the progress made in their studies will compare favorably with former years, and with other schools.

Hoping our labors may meet with your approval, and thanking you for your uniform kindness, I submit this report.

J. W. BABCOCK,

Principal Teacher.

AN ACT

TO PROVIDE FOR THE GOVERNMENT AND MANAGEMENT OF THE STATE REFORM SCHOOL.

SECTION 1. The State Reform School at Waukesha shall be the place of confinement and instruction of all male children between the ages of eight and sixteen years, who shall be legally committed to the state reform school as vagrants, or on the conviction of any criminal offense, or for incorrigible or vicious conduct, by any court having competent authority to make said commitment.

The managers of the State Reform School are SECTION 2. hereby clothed with the sole authority to discharge any child or children from said reform school, who have heretofore been or may hereafler be legally committed thereto; and such power shall rest solely with said board of managers, and they shall have power to return any child to the court, justice or other authorities ordering or directing said child to be committed, when in the judgment of said managers they may deem said child an improper subject for their care and management, or who shall be found incorrigible, or whose continuance in the school they may deem prejudicial to the management and discipline thereof, or who in their judgment ought to be removed from the school from any cause; and in such case said court, police justice or other authority shall have power, and are hereby required, to proceed as they might have done, had they not ordered the commitment to such school.

SECTION 3. The superintendent of the State Reform School shall charge to each of the several counties in this state, in a book provided by him for that purpose, the sum of one dollar (\$1.00) per week, for the care and maintenance of each person remaining in said State Reform School, who was committed

thereto as a vagrant, or by reason of incorrigible or vicious conduct, or who may thereafter be received into said state reform school, committed for vagrancy or incorrigible or vicious conduct, from each of such counties respectively: provided, that the cost of the original commitment of all persons to said state reform school shall be chargeable to the county from which the person committed to the said school is sent: and provided further, that it shall be the duty of the superintendent of said state reform school to procure the arrest and return of any person escaping therefrom; and it shall also be the duty of any justice of the peace, marshal or constable, upon information of such escape, to arrest and return any such fugitive, as above mentioned.

Section 4. The superintendent of the State Reform School shall keep an accurate account of the amount due from each county for the support of persons therefrom, and shall annually, on or before the tenth day of October in each year, report to the secretary of state the amount which may then be due from each county for the year ending on the first day of October preceding, which report shall state the name of each person for whom such account is rendered, the number of weeks which such person has been in said school during said year, and the amount charged for each of said persons respectively; and such report shall be verified by the oath of said superintendent as to its correctness. The secretary of state shall add the amount due from any county in this state for the support of such persons to the state tax apportioned to said county, and such amount shall be collected and paid into the state treasury for the use of the State Reform School.

Section 5. The board of managers shall consist of five members, who shall be appointed by the governor and hold their offices for three years; said board to be divided into three classes, and so divided that the term of one class shall expire each year, on the first Tuesday of March, and shall receive for their compensation two dollars and fifty cents (\$2.50) per day for every day actually employed, and ten cents (10) per mile for every mile actually traveled, and shall verify their account by their oath or affirmation.

١

Section 6. Such managers shall have the power to make rules, regulations, ordinances and by-laws for the government, discipline and management of the State Reform School, and the inmates thereof, as to them may seem just and proper: provided, that such rules and by-laws shall be in accordance with the constitution of this state and the constitution of the United States; and they shall have the power to place the children committed to their care, during the minority of said children, at such employment, and cause them to be instructed in such branches of useful knowledge as shall be suited to their years and capacities; and they shall have power in their discretion to bind out said children, with their consent or the consent of their parents or guardians, if they have any, as apprentices or servants during their minority, to such persons, and at such places, to learn such proper trades and employments, as to their judgments will be most for their reformation and amendment, and the future benefit of such children: provided, that the religious opinions of the inmates shall not be interfered with.

Section 7. The said managers shall appoint a superintendent of said state reform school, and such officers as they may deem necessary for the interest of the institution, with a view to the accomplishment of the object of its establishment and economy of its management; and the said managers shall make out a detailed report to the governor of the performance of their duty, on or before the tenth day of October in each year, which report shall contain a statement of the number of persons in the school at the commencement of the year, the number received during the year, and in the institution at the commencement of the year, together with all such facts and statements as they may deem necessary to communicate; which report shall be laid before the legislature by the governor.

SECTION 8. The courts and several magistrates in any county in this state may in their discretion, sentence to the State Reform School any such male who may be convicted before them as a vagrant, or of any petit larceny or mislemeanor; and the several courts may, in their discretion, send to said State Reform School any such male who may be convicted before them of any offense

which, under the existing laws, would be punishable by imprisonment in the state prison: provided, in all cases, the term of commitment shall not be less than to the age of twenty-one years.

Section 9. The managers of the State Reform School shall have power, in their discretion, to restore any person duly committed to said school, to the care of his parents or guardian, before the expiration of their minority, if in their judgment it would be most for the future benefit and advantage of such persons.

Section 10. The courts and several magistrates in any county in the state, shall also have the power to commit to the State Reform School any male child, under the ages specified in section one of this act, upon complaints and due proof made to said court or magistrate by the parent or guardian of such child, that by reason of incorrigible or vicious conduct, such child is beyond the control and power of such parent or guardian, and that a due regard for the morals and future welfare of such child manifestly requires that he should be committed to the guardianship of the managers of the State Reform School.

SECTION 11. The managers of the State Reform School are hereby authorized and directed to procure suitable places for the females under their charge, and in their discretion to dispose of them as in their judgment, will be for their best interests and the interest of the state.

Section 12. All acts or parts of acts inconsistent with the provisions of this act, are hereby repealed, and this act shall take effect and be in force from and after its passage.

Approved March 15, 1870.

It will be seen by an examination of the act, that every inmate must be committed by a court or magistrate. Frequent application is made for the admission of children, by their friends, on the ground of incorrigibility, with the hope that the restraining influences of the school may save them from actual crime. The tenth section of this act was framed with express reference to such cases, and it is believed to be the most important one in

the whole chapter. Such cases when committed, should at once be taken to the school without being imprisoned, as is sometimes done, in the county jail for several days with matured and hardened criminals. In some cases more vicious examples are there seen and more corrupt influences experienced than during their whole previous life.

Objection has been made to the term of commitment, which in every instance must be during the minority of the inmate. This is regarded by many as the period of actual confinement in the school, while it is designed only to give the board of managers such control over the inmate as to secure his complete and thorough reformation. Provision is made for the discharge of every one, when, in the opinion of the board, it would be safe and proper to do so.

There is another reason why the term of commitment should be as it is. There are many children who have no parents or guardians, and who, if discharged on the expiration of a sentence of one or two years, would have no one to provide for them, and if good homes should not be secured at the time of their discharge, which cannot always be done, they would be thrown upon society, homeless and friendless, and be compelled frequently to resume those vicious habits from which they may have been only partially reformed. It is impossible to determine the length of time necessary to reform any one case at the time of commitment. It must be left discretionary with those in the immediate charge of the school. Experience has shown that in a majority of cases, the average time is about two years, while some require a much longer period before they are fitted for places of trust and responsibility.

ANNUAL REPORT

OF THE

SUPERINTENDENT

OF

PUBLIC INSTRUCTION

OF THE

STATE OF WISCONSIN,

For the School Year ending August 31, 1871.

SAMUEL FALLOWS,
Superintendent of Public Instruction.

MADISON, WIS.:
Atwood & Culver, State Printers, Journal Block.

ANNUAL REPORT

OF THE

SUPERINTENDENT

OF

PUBLIC INSTRUCTION.

Office of Superintendent of Public Instruction, Madison, December 10, 1871.

To the Legislature of Wisconsin:

GENTLEMEN:—It gives me great pleasure to be able to report that very satisfactory progress is being made in the great work of education in our state.

I have given myself unreservedly to this cause during the past year, striving in all ways possible to stimulate the energy and enthusiasm of teachers, and awaken an interest among my fellow citizens in the prosperity of our common schools and our higher institutions of learning.

During the past year I have attended institutes, delivered public addresses or visited in an official capacity, the following counties, viz.: Adams, Ashland, Bayfield, Dane, Dodge, Douglas, Fond du Lac, Grant, Green, Iowa, Juneau, Marquette, Milwaukee, Outagamie, Polk, Portage, Rock, St. Groix, Sauk, Walworth, Waushara and Wood. I have been received with great kindness both by teachers and people, and have had most gratifying evidences of their cordial co-operation in the educational work.

In many of the counties new and comfortable school-houses are taking the place of old, incommodious and dilapidated buildings, some of them being large and elegant structures. Districts are greatly aided in building school-houses, by the facilities afforded them for borrowing money from the trust funds of the State.

Through the influence of our Normal Schools and the excellent system of instruction successfully carried on by Prof. Graham and others, in the short term and Normal Institutes, the standard of attainment has been raised among many of our teachers, and the schools under their charge have been greatly benefited.

I find very general satisfaction with the county superintendency. In a few places a wish has been expressed for a revival of the old system of supervision by town superintendents. But I am only uttering the opinion of a great majority of the best-friends of education in the state and elsewhere, who have carefully examined the subject in all its bearings, whether of thoroughness of supervision, standard of scholarship or economy, when I say, that it would be a calamity to our educational system to revert to the town superintendency as it formerly was. The people of Wisconsin are not prepared, nor do I believe they will ever be prepared, to take this deplorable step backward.

I have recommended a plan for bringing the State University into vital relations with our public school system, which, if adopted will, I believe, work great good, both to the public schools and to the University.

For particulars respecting the County Superintendency, the State University, the Normal Schools and Normal Institutes, I would refer you to those portions of the report relating to those topics.

The leading facts embraced in the documents and tables accompanying the report are submitted, with such comments as seemed appropriate.

I would again acknowledge my obligations to my assistant, Rev. John B. Pradt, for his faithful and laborious services in the office. They have been of great value to me in carrying forward the educational interests of the State.

I.—SCHOOL DISTRICTS.

The number of districts reported, (not including joint districts), is 4,089. Last year the number returned was 3,822, giving an increase of 267. This is singular, since the number returned last year was twenty-three less than that for the year previous. Looking at the returns for the several counties, some strange discrepancies appear. Columbia ccunty returned last year 121 districts; this year there appear to be 153. Dane, (2d district), had last year 85; this year it has 146. Jefferson, last year 87; this year 169—almost double. These returns are in some way quite erroneous, as there can be no such sudden increase in these old counties. The number of parts of districts returned, is 2,033, estimated to form 904 joint districts. Last year the number of parts was 2,121, forming by estimate, 942 such districts—a decrease of 38—which is encouraging, if reliable, since joint districts are very apt to get out of joint. The aggregate of school districts then, for 1871, allowing as last year 38 for those cities which do not report to county superintendents, is 5,031—an apparent increase of 229 over the number for 1870.

I .- CHILDREN OVER FOUR AND UNDER TWENTY YEARS OF AGE.

The number returned, is 420,948, an increase of 8,467 over 1870. The increase of 1870 over 1869 was 13,734.

III.—NUMBER OF CHILDREN OF SCHOOL AGE IN THOSE DISTRICTS WHICH MAINTAINED SCHOOL FOR FIVE OR MORE MONTHS.

The number returned under this head is 418,358; last year it was 409,528—an increase of 8,830. This is somewhat more than the increase in the number of children of school age, which is a good indication.

IV.—TOTAL NUMBER OF PERSONS ATTENDING THE PUBLIC SCHOOLS.

The number given is 266,014, which is 1,877 less than last year; but as the number returned last year was 19,000, in excess of the number for the year previous, it is probable that here

again some serious error is involved, and the reasonable solution is that the number returned last year was too large. The items of school attendance are, 262,947 over four and under twenty years of age; under four, 679; over twenty, 1,659. Tabulating all classes of pupils, the following is the result:

The number reported as attending public schools, is The number reported as attending private schools, is	17,267
The number reported as attending academies and colleges, is The number estimated for benevolent institutions, is	
Total	285,955

It may be assumed that there are 7,500 more pupils, within and without the state, in attendance upon schools of some kind, but who are not reported in any way, and who therefore are not included in the above table. We shall have then an aggregate of school attendance, amounting to 294,684, but still leaving 126,764 persons of school age not in attendance upon any school. The subject of school attendance is further considered under the head of "Special Statistics," on a subsequent page.

The number of days school has been taught by qualified teachers is 848,200. Last year it was 795,895—showing an increase of 52,305 days.

V .- TEACHERS AND TEACHERS' WAGES.

The number of teachers required in all the schools is 5,837, an increase upon the number required last year of 176. The whole number employed, some portion of the year, was 9,168, a decrease upon the number employed last year of 136. This indicates some tendency to a more permanent employment of our teachers, which is encouraging. This tendency is especially observable in the cities, which require 504 teachers, and have employed but 521 different persons, whereas 407 only were required last year and 514 different persons employed.

The average wages of male teachers, not including the cities, was \$41.40 per month, and that of female teachers, \$27.62; a decrease of 37 cents for the gentlemen, and an increase of 22 cents for the ladies, as compared with the previous year. In the cities the

average wages of male teachers has increased from \$1,001 per annum to \$1,053; but for female teachers it has decreased from \$370 to \$367—not a good sign: and indicating, perhaps, that too many seek situations in the cities.

VI.—TEACHERS' CERTIFICATES.

The whole number issued (exclusive of the cities and state certificates) was 7,225, which is 209 less than the number for the previous year. This indicates some tendency to permanence in the teacher's vocation. The items for the past two years, are as follows:

	1870	1871	1870	1871	1870	1871	1870	1871
	1s gr.	1st gr.	2d gr.	2d gr.	3d gr.	3d gr.	Total.	Total-
To males To females	78	87	203	206	2,115	1,979	2, 396	2, 272
	36	41	199	208	4,003	4,704	5, 138	4, 953
Totals	114	128	402	414	6, 118	6,683	7,584	7, 225

In the cities certificates are not issued upon any uniform basis, and they cannot be classified with those issued by county superintendents. The whole number of certificates granted in the cities, so far as returned, is 448, which, together with 15 state certificates, granted in July last, and the number given in the foregoing table, make an aggregate of 7,688 of all grades. The subject of state certificates is considered on a subsequent page.

VII.—GRADED SCHOOLS.

Outside the cities, where all the schools are supposed to be graded, the number of schools with two departments is 168, an increase of 43; the number with three or more departments is 98, the same as last year. Attention is again called to the fact that graded schools could be much more extensively introduced, in the rural districts, under the "Town System." Estimating the cities to embrace 119 graded schools, the whole number in the state is 385.

VIII.—SCHOOL-HOUSES.

The whole number reported is 4,933, which is 32 less than last year. As a considerable number of houses have been built, a decrease is not probable. The number returned last year was probably too large, being 233 more than for the previous year. Moreover, the present school-houses, according to the returns, will accommodate 13,923 more pupils than last year, which would hardly be probable if fewer in number. The destruction of school-houses, with other property, in the great fires, was subsequent to the close of the school year. It appears, however, that the amount levicd for building and repairing has been much less than for the previous year, being for 1870, \$408,763.31, and for 1871, 305,198.79.

A table was given last year of seventy-eight localities, which have school-houses valued, with the sites, at from \$5,000 to \$75,000. The table is not repeated this year. Good structures have been erected or enlarged at the following places, and are valued as indicated: Sparta, \$30,00; Fort Howard, \$22,625; Waukesha, \$15,000; Potosi, \$13,350; Jefferson, \$10,000; Milton, \$10,000; Wauwatosa, \$7,400; Omro, \$7,000; Ripon, \$7,000; Fountain City, \$7,000; Platteville, \$6,500; Richland Center, \$6,400; Fox Lake, \$6,355; Chilton, \$6,000; Manitowoc, \$5,500; Bloomington, \$5,150; Port Washingtou, \$5,000; Stevens Point, \$5,000; Barton, \$5,000. Others have been completed since the close of the school year, especially at Black River Falls and Monroe, a more particular notice of which will appear appropriately in the next annual report.

IX.—RECEIPTS AND EXPENDITURES.

The sums received and expended for school purposes, are as follows:

RECEIPTS.

Money on hand August 31, 1870. From taxes levied for building and repairing. From taxes levied for teachers' wages. From taxes levied for apparatus and libraries. From taxes levied at annual town meeting. From taxes levied by county supervisors. From income of State school fund. From all other sources.	250, 646 871, 453 9, 568 219, 156 195, 615 148, 395	65 70 01 30 14 79
Total amount received	\$2,305,382	
EXPENDITURES.		
For building and repairing	\$305, 198	79
For apparatus and libraries	6, 549	6.5
For services of male teachers	503,954	60
For services of female teachers	790,055	
For old indebtedness	101, 750	
For furniture, registers and records	35, 962	
For all other purposes	195, 616	32
Total amount expended	\$ 1,932,539	24
Money on hand August 31, 1871	\$398, 931	27

X.—SUMMARY OF GENERAL STATISTICS.

XI.—EDUCATIONAL FUNDS.

An exhibit of the condition of the educational funds of the state is taken, by permission of the secretary of state, from his report for 1871, and is as follows:

School Fund.

The School Fund is composed of—

- 1. Proceeds of lands granted by the United States for support of schools.
- 2. All moneys accruing from forfeiture or escheat, and trespass penalties on school lands.
- 3. All fines collected in the several counties for breach of the penal laws.
- 4. All moneys paid as an exemption from military duty; and
- 5. Five per cent. on sale of government lands.

RECEIPTS.

XII.—APPORTIONMENT OF SCHOOL FUND INCOME.

The amount apportioned for the past year was \$160,063.62. The ratio of apportionment was 39 cents per scholar. The apportionment is made on the basis of the number of children returned as residing in those districts which maintained school five or more months during the preceding year, and not on the number attending school in those districts, as seems to be supposed by many of the local school officers. No apportionment was made for those districts which did not maintain school at least five months during the preceding school year, except in some cases of peculiar hardship, which were provided for by special legislation. As such legislation is now prohibited, some general provision seems necessary, more especially in view of the destruction of so many school-houses in the northern portions of the state by the great fires of October last.

It is not probable that the ratio for the next apportionment, will vary much from that of the last one.

A detailed statement of the last apportionment, by counties and towns, will be found in table No. I of the appendix.

The apportionments from 1850 to 1871, inclusive, are as follows:

Years.	No.of Children.	Apportionment.
1850		3 8-10 cents per scholar
1851		50 do
1853	4	45do 72do
1855	186, 960	80 5-10 do

1867		47dodo
1868		47do
1870		40do

XIII.—TEXT-BOOKS.

The total number of districts, including the cities, reported as having adopted a list of text-books, is only 826. Last year the number returned was 2,485, including the cities. This very large discrepancy is accounted for by the fact that although the district clerks reported, the proper heading in the blank reports of the town clerks was accidentally omitted. The blanks for the past year had to be remodeled to make room for the "special statistics." In point of fact, the number of districts adopting a list constantly increases. For a detailed statement of the books most used in the different counties, reference is made to Table No. VII. in the Appendix. This table does not include the cities. Were the state to become the purchaser of large quantities of the books

most used, distributing them at cost and incidental expenses, a large sum could doubtless be saved, as there is now in the purchase and supply of Webster's Dictionary; or a very small percentage of profit would yield a sum of some importance that might be added to the increase of the school fund, and the individual purchaser still obtain school-books at considerably less than the present cost.

XIV.—WEBSTER'S DICTIONARY.

There were fifty-nine copies on hand at the date of the last report. Provision was made at the last session of the Legislature for the purchase of three hundred copies, of which only three remain. Three hundred and seven have been distributed, on application, to districts unsupplied, and forty-nine have been sold to districts in which the dictionaries have been lost, or were worn out. The number required for re-supplies increases every year, and to meet this demand, and to fill applications from unsupplied districts, new and old, for the current year, a purchase of four hundred copies will be required. The proceeds of those sold are passed, as the law requires, to the income of the school fund.

XV .--- OFFICE LIBBARY.

Some additions to the library have been made, but of course few works of value or importance can be obtained, with so small an appropriation as that now allowed—\$50. The ends of the general law which requires the State Superintendent "to purchase rare and valuable works on education, for the benefit of teachers, authors and others who may wish to consult them," cannot, with the present increased price of such books, be carried out, unless the allowance is increased.

XVI.—STATE PRINCIPALS' ASSOCIATION.

The leading principals of public schools in the state have formed an association, and held a meeting in this city in December last. Their consultations and discussions cannot but be productive of good. Among other subjects discussed were

"Compulsory Education," "What course of instruction best disciplines the child for good citizenship?" "How far may the State wisely prescribe matter and method of instruction in the schools it supports?" "How can teachers best gain Normal Instruction?" and the following resolutions were adopted, among others:

"Resolved, That in the opinion of this convention, it is both the right and the duty of the State to enforce the elementary education of all its children, in order that its citizens may be qualified to discharge the political and social duties-devolving upon them."

"Whereas, Adequate provision has generously been made by our legislature for the special training of various classes of children who, by reason of infirmities, are unqualified to participate in the privileges of the public schools, while feeble-minded children receive no care from the state; therefore,

"Resolved, That this association most earnestly and respectfully ask our legislature to make this much needed provision for that unfortunate class."

"Resolved, That that the management of our Normal Schools has thus far deserved the hearty approval of the teachers of this state, and that they should extend to said schools their sympathy and encouragement."

XVII.—STATE TEACHER'S ASSOCIATION.

The nineteenth annual meeting of this body was held in this city, on the, 12th and 13th days of July last. Addresses and lectures were delivered by the president, R. Graham, S. H. Peabody, a Professor in the Chicago High School, W. T. Phelps, Principal of Winona, (Minnesota) normal school, Professor M. P. Cavert, from the state of New York, and professor A. H. Peabody, of Harvard University. Valuable papers were read by Oliver Arey, President of the Whitewater Normal School, Amos Whiting, Superintendent of Trempealeau county, Mary E. Wadsworth, of Beaver Dam, Eliza Graves, of Kentucky, S. H. Carpenter, professor in the University, Judge Knapp, of this city, W. C. Whitford, President of Milton College, and Mrs. M. E. Holmes of Berlin; a poem was also read by Mrs. H. E. Arey, of the Whitewater Normal School. The discussions held on various topics connected with the work of education, and the results of the meeting cannot but be of benefit to the state.

XVIII.—UNIVERSITY OF WISCONSIN.

As will be seen by the annual report of the Regents of the University, this institution is now in a more flourishing condition than it has been in any preceding period of its history. The Regents consider themselves fortunate in securing the services of Rev. J. H. Twombly, D. D., of Boston, as President of the University, an accomplished, high-toned gentleman of experience, energy, practicality and tact. He has already entered upon the duties of his office, with promise of great success. Rev. J. W. Sterling, LL. D., still retains his position as Vice President, to the great gratification of the Alumni and President and other friends of the University. He has been identified with the institution for nearly a quarter of a century, and has brought to the discharge of his important duties a zeal and singleness of purpose rarely excelled. The University owes a great deal of its present prosperity to his ability and devotion. The remainder of the faculty are earnest and competent instructors.

The needs of the university are fully set forth in the report. With an attendance of 485 students, a salaried force of 24 teachers, and the necessary incidental expenses, the present income is insufficient to meet the actual wants of the university. It is estimated that at least \$10,000 per annum will be needed to cover the deficiency. When it is remembered that the choicest lands of the original grant by congress and of the agricultural college grant have been sold by the state for \$1.25 per acre only, and that but a little over \$500,000 will be realized from these grants when the the remaining 86,000 acres shall have been sold, I think there will be no disposition to question the justice or the expediency of granting the above appropriation.

The state and not the university has received whatever benefit may have been derived from such sales.

The University is making the amplest provision for the education of the young women of the state. Al! the departments are open to them equally with young men; the same degrees and rewards of scholarship are theirs also. The Ladies' Hall, for which an appropriation of \$50,000 was made by the Legislature

of 1870, is nearly completed. The rooms are to be comfortably furnished, and rented at a moderate charge. The price of board is to be reduced, so that parents of very moderate means may be able to secure a thorough education for their daughters. Ladies and gentlemen are allowed to recite together, whenever it shall be deemed best by the Faculty. Ladies wishing to pursue a "Ladies' Course," and recite with their own sex exclusively, have the privilege of so doing.

That the University ought to be brought into more intimate and practical relations with the public schools, none can doubt. The relation at present, to some extent at least, is one of antagonism. The preparatory school of the University draws away students from the high school. It is supposed to be more honorable to be connected, however distant the relationship, with the University than with the high school.

It is also claimed that some advantages accrue to the preparatory student as regards his examination for college, which are not given to other students. The latter claim is without doubt unfounded in fact. The impression, however, exists and exerts its influence.

I think the antagonism would cease, and harmony and efficiency result, if a plan like the following were adopted:

Let the Regents and Faculty of the University furnish to all regularly organized high or graded schools of the state a list of the studies required for admission into the different collegiate departments, with the per cent. to be attained in each branch.

Let all the graduates of such schools on the certificates of their principals, be admitted into the college classes for which they are prepared, without further examination and without any charge for tuition during their stay at the University. Let the names of such students and of the schools from which they graduated be published in the catalogue of the University and in the report of the Superintendent of Public Instruction.

I think the adoption of such a plan would make the principals vie with each other, as to the quality and quantity of the students sent to the University; it would have a most healthy influence upon the patrons of the schools, awakening an interest in their

prosperity never before experienced, since their children in the most impressible period of their history, could be prepared at home for college. It would awaken a desire to secure the best teachers for these responsible positions, and create a willingness to pay them as they deserve. It would bring the University to the knowledge of the people, and fasten it to their affections, and greatly increase the number of its students; it would give a needed stimulus to many boys and girls to seek a higher culture, offering them a honorable reward for their application and scholarship; it would help lift the standard of all the graded schools in the state, and complete the unity of our whole educational system; and lastly, it would have a most beneficial reactionary influence upon successive legislatures, making them not only just, but generous in their attitude toward the University.

XIX.--COLLEGES AND UNIVERSITIES.

The following institutions have reported, in compliance with law: Beloit College, Galesville University, Lawrence University, Milton College, Ripon College, Racine College and Wisconsin Female College.

The following table presents a summary of the most important statistics for the past two years:

	<i>1870</i> .	1871.
Number of Colleges reported (not including State		
University)	9	7
Number of members of faculties	66	63
Number graduated at last commencement	49	51
Total number who have graduated	484	418
Number of students in senior classes	52	47

Amount of income from tuition	26,687	20,090 71
Amount of income from other sources	24, 304	69,198 73
	• •	

XX.—ACADEMIES.

Two academies only have been reported, viz.: Evansville Seminary, and the German and English Academy, Milwaukee. The statistics of these institutions are given in the appendix. The fact noticed last year, may be repeated with emphasis, namely, that there is a tendency to the extinction rather than increase of academies, arising from the fact that the high schools, normal schools, and the preparatory departments of the State University and the colleges, absorb the larger share of academical students. In fact, most of the colleges in the State are as yet in the academical rather than collegiate stage of development. As they take a higher rank, it may be presumed that their preparatory departments will disappear, and that academies, a part of whose especial work it shall be to fit young persons for college, may be again built up, and liberally sustained.

As bearing upon this subject, a bill is reprinted in this connection, which was introduced at the last session of the Legislature by Hon C. C. Kuntz, Chairman of the committee of the Assembly on Education, and so much of his report, in that capacity, as explains the bill. From his report it will be seen that he entertains the belief that such academies might not only be preparatory schools for the University and the colleges, but furnish the means for training teachers of the common schools, in some measure for their work:

"How and by what means can we procure better qualified teachers? Can the present system of State Normal Schools be extended so as to supply the want of trained teachers? We believe not, because it would take at least fifteen Normal Schools to supply all schools with trained teachers; and if it were possible, it would not benefit the great majority of our country schools, as they are neither able nor willing to pay such a salary as a graduate of a normal school has a right to expect. What the state needs is a harmonious system of county academies with a Normal department. Such institutions would not only afford an opportunity to all youth of State to get a higher education, and would furnish well prepared students to the University, but would also do more through its Normal department to elevate the character of our common schools than can possibly be done by State Normal Schools, which will, under existing circumstances and the present condition of the country, only provide cities and villages with trained

teachers. Let us see how-such an academy with three or four classes could be organized and what studies pursued:

"	HOURS	DPD	WERE	EV\D	TACT	PPA TO	
	HUUKS	PKK	W Hi Hi K	RUK	KAUH	LILADO	

Subjects.	I.	II.	III.	ıv.
English	3	3 3	3	2 2
Trench		2 3	2 5	2 5
Freek		8	4	5 4
Natural Sciences	3 2	8 2	4	4
distory	1	2 1	2 2	2 2
Penmanship	2	2 2	2	2
Vocal Music		2 1 5	2	

[&]quot;Art and science of teaching, Latin, and Greek, could be made elective. A great many pupils would attend only one or two years; for this reason the art and science of teaching ought to be taught the first two years.

"With such an academy in each county there would be no more excuse for being an insufficient teacher; our schools would be elevated and improved in a very short period. It is true such a system of high schools would call for an expenditure of about \$200,000, but this sum, large as it may appear, is only ten per cent of the amount now expended for our common schools, half of which is wasted on account of untrained and inefficient teachers.

"But whatever these schools may cost, the state cannot foster and encourage education to a better advantage than by establishing such institutions. They will afford the possibility of education as widely and freely as the common schools, but it will be the possibility of a higher education, consistently and harmoniously ordered.

"Now a vast amount of time is lost in childhood and youth for the want of early opportunities of educational training, and young men who propose to enter the higher institutions of learning, have either to suffer the loss of knowledge which ought to have been acquired long before, or are compelled by spasmodic efforts, often ruinous to the health and injurious to the mind itself, to make up, and that in an imperfect manner, the deficiencies of early life.

"Our University would also be elevated, because it would be attended by

a class of well prepared students. Every one who has studied the development of the school system in other countries, knows that without a perfected University, we can never have a perfected system of public education, even in the lowest degree; and as it has been, so must it ever be, that popular education must flow out of the higher institutions, as the showers that water the valleys and plains fall from clouds which were gathered on the mountains.

"The university, the academies, the normal schools, once started into existence, must move on together. Each is necessary to the whole, and the prosperity of each contributes to the prosperity of the whole. Nothing but sheer sciolism or other ignorance can conceive of any opposition between them. As it has been truly said: 'Education is like a garden of trees where some are just springing from the earth, some have attained a young growth, some are beginning to tower aloft in nascent form, beauty and strength, while others have reached a mature a majestic growth and are bearing seeds and scattering them far and wide. There can be no great trees, unless there are at first little sprouts shooting through the soil, but the great trees sow the seeds which perpetuate the kind.'"

A BILL PROVIDING FOR COUNTY ACADEMIES.

"SECTION 1. Each county in the state, having a population of two thousand inhabitants or over, as shown by the last state or federal census, may establish an academy on the conditions and in the manner hereinafter, prescribed, for the purpose of affording better educational facilities for pupils more advanced than those attending district schools, and for persons desiring to fit themselves for the vocation of teaching, or preparing themselves for the university.

"SECTION 2. For the purpose of encouraging the establishment of such academies, there is hereby annually appropriated the sum of one hundred thousand dollars, or so much thereof as may be needed, out of any moneys in the state treasury not otherwise appropriated.

"SECTION 3. Any county that shall establish such an academy in the manner hereinafter prescribed, shall receive from the state treasury one hundred dollars for every one thousand inhabitants in such a county: provided, however, the county will raise at least an equal amount and provide for the necessary building.

"Section 4. Whenever a majority of the board of supervisors, at any one of their regular meetings, shall have decided to establish such an academy, they shall immediately proceed to appoint six persons, who shall be residents of the county, but no more than two of whom shall be residents of the same town, who shall with the county superintendent of common schools, constitute a board of trustees for said academy. Each of said

trustees, appointed as aforesaid, shall hold his office until his successor is elected and qualified; and shall be required within ten days after appointment, to qualify, by taking the oath of office and giving such bonds as may be required by the said board of supervisors, for the faithful discharge of his duties.

"SECTION 5. At the next general election after said appointment, there shall be elected in such county, six trustees, who shall be divided into three classes, of two each; and each class to hold their office one, two and three years respectively, and their respective terms to be decided by lot; and each year thereafter there shall be two such trustees elected to succeed those whose term is about to expire. And said trustees shall qualify and enter upon the duties of their office in the same manner, and at the same time as other county officers.

"SECTION 6. The county superintendent shall be ex officio president of said board of directors, and at their first meeting in each year they shall appoint from their own number a secretary and treasurer who shall perform the usual duties devolving upon such officers, for the term of one year, or until their successors are appointed to take their places.

"SECTION 7. At said meeting, or at some succeeding meeting called for such purpose, said trustees shall make an estimate of the amount of funds needed for building purposes, for payment of teachers' wages for contingent expenses, and they shall present to the board of supervisors a certified estimate of the per centum of tax required to raise the amount desired for such purposes.

"SECTION 8. The said tax shall be levied and collected in the same manner as other county taxes, and when collected the county treasurer shall pay the same to the treasurer of the county academy, in the same manner that school funds are paid to the district treasurer, as required by law.

"SECTION 9. The amount of money which the county is entitled to receive from the state, according to the provisions of section 3, shall be paid by the State Treasurer to the treasurer of the county academy, on the warrants of the Secretary of State, to be drawn in pursuance of the certificate of the secretary of the board of trustees, and countersigned by the president of the board of trustees, and such other evidence as the Secretary of the State shall require; and no such certificate shall be issued until the necessary buildings shall have been provided by the county, or any town, village or city therein.

"SECTION 10. The treasurer of the academy shall give such additional bonds as the trustees may deem sufficient, and receive all moneys from the state and county treasury and from other parties, that belong to the funds of said school, and pay the same out only by direction of the board of trustees, upon order duly executed by the president, and countersigned by

the secretary thereof, stating the purpose for which they were drawn. Both the secretary and treasurer shall keep an accurate account of all moneys received and expended for said academy; and at the close of each year, and as much oftener as required by the board, they shall make a full statement of the financial affairs of the school.

"Section 11. The said board of trustees shall proceed as soon as practicable, after their appointment as aforesaid, to select the best site that can be obtained without expense, and a title thereof shall be vested in said county. They shall then proceed to make such purchases of material, and let such contracts for their necessary school buildings as they may deem proper. The said board of trustees shall also have power and authority to demand and receive the sum or sums of money donated and subscribed by any person or persons, or any town, village or city in the county, to aid in the erection of the necessary buildings in such manner as said board may prescribe, and apply the same to erection and completion of the required buildings, and the purchase of the necessary books, apparatus, furniture and fixtures.

"Section 12. When said board of trustees shall have furnished a suitable building for the academy, they shall employ some competent teacher to take charge of the same and furnish such assistant teachers as they may deem necessary and provide for their salaries. The course of studies to be pursued in such academies shall be: English language and literature, German language and literature (French and Latin eclectic), mathematics, natural science, geography, history, national economy, the fundamental laws of the United States and this state, book-keeping, drawing and vocal music, and a special course of instruction in the theory and art of teaching for those students who desire to fit themselves for the vocation of teaching. As far as practicable, model schools shall be encouraged.

"Section 13. Tuition shall be free to all pupils of such academy residing in the county where the same is located, The board of trustees, however shall make such rules and regulations as they deem proper in regard to age and grade of attainments, essential to entitle pupils to admission in the school. If there should be more applicants than can be accommodated at any time, each district shall be entitled to send its equal proportion of pupils, according to the number of scholars it may have, as shown by the last report to the county superintendent of common schools, and the boards of the respective school districts shall designate such pupils as may attend.

"SECTION 14. If at any time the academy can accommodate more pupils than apply for admission from the county, the vacancy may be filled by applicants from other counties, upon the payment of such tuition as the board of trustees may prescribe, but at no time shall pupils continue in said academy to the exclusion of pupils belonging to the county in which such academy is situated.

"SECTION 15. The principal of any such academy, with the approval of the board of trustees, shall make such rules and regulations as he may deem proper, in regard to studies, conduct and government of the pupils under his charge, and if any such pupils will not conform to, and obey the rules of the school, that they may be suspended or expelled therefrom, by the board of trustees.

"SECTION 16. The said board of trustees shall annually make a report to the board of supervisors of their respective county, which shall specify the number of students, both male and female, who have been in attendance at the county academy during the year; the branches of learning taught, the text books used, the number of teachers employed, the amount of salaries paid to them, the amount expended for library and apparatus, and for building and all other expenses; also the amount of money on hand, debts unpaid, and other information deemed important or expedient to report. Said report shall be printed in at least one newspaper in the county, if any is published therein, and a copy of the report shall be forwarded to the State Superintendent of Public Instruction.

"SECTION 17. The board of supervisors shall have power to fill any vacancy that may occur in the board of trustees of that county by appointment, until the next general election, and a majority of any such board shall be a quorum for the transaction of business.

"Section 18. The board of supervisors may allow each member of the board of trustees the sum of two dollars per day for the time actually employed in the discharge of his official duties, and when such accounts are presented for payment, they shall be audited and paid out of the county treasury, in the same manner as other accounts against the county, and said trustees shall not be entitled to any further remuneration for service, or expenses."

XXI.—THE BENEVOLENT INSTITUTIONS.

Although some of these institutions have to do with the work of education for peculiar classes, they do not report to this department. It seems not improper, however, to present some facts from their reports which are of general interest.

Institute for the Education of the Deaf and Dumb.

From the report of the Principal, Geo. L. Weed, Jr., who succeeded Mr. Edward C. Stone, in March last, the following items are taken:

"ATTENDANCE.

Number present Oct. 1, 1870	25
Whole number	
Number present Oct. 1, 1871	137

"THE ARTICULATION CLASS.—This department of the school has been continued during the year with varied success. A few congenitally dea or who lost their hearing so early that it has never been of practical benefit to them, have been a pleasing illustration of what can be done by faithful and protracted labor by teacher and pupil. One section has constituted a regular class in the school, with uniform studies; and still another has been composed of members of other classes, taught by signs, but who spent a small portion of each day in the articulation room, practicing lip reading and articulation. * * It should be understood that in this Institute the distinction between what is called a sign class and the articulation class, is in the medium of instruction: one is taught by signs, the other by articulation. The same course of study is being pursued by two such classes, giving a fair opportunity of testing the relative progress by the different methods.

- "Respecting articulation itself, our experiments thus far give the following results, viz:
 - "1. Articulation by congenital deaf mutes is possible in certain cases.
- "2. Articulation by the mass of deaf mutes is so nearly impracticable, both in its attainment and in its use, as not to come under the legitimate work of free deaf mute instruction.
- "3. Semi-mutes should receive special attention in the preservation and use of what language they have acquired, and in adding to their vocabulary.

"THE CENSUS.—In connection with Mr. Thomas H. Little, Principal of the Wisconsin Institute for the Education of the Blind, I have made an examination of the last census, so far as relates to the deaf and dumb, the blind and the idiotic, in this state. The returns are, in many respects imperfect, and manifestly incomplete, as is evidenced from the fact that the names of many persons known to us as blind or deaf and dumb, are not enrolled. Yet the census gives sufficient data for the assurance that the demand for benevolent enterprise in the state is rapidly increasing. The census and the books for the Deaf and Dumb Institute tog ether, contain the names of four hundred and eighty deaf mutes in Wisconsin. Of these

two hundred and nineteen are under ten or over twenty years of age; one hund-ed and thirty-seven are now in school; twenty-four have finished their school period. This leaves one hundred who ought immediately, or soon, to be under instruction. There is no doubt that this number would be largely increased by more accurate census returns.

"FEEBLE-MINDED.—Every year brings its unpleasant duty of turning from our doors those whose admission had been hoped for by their friends, but whose mental defects exclude them from the benefits sought here. Parental partiality is eager to class an unfortunate child with the deaf and dumb, rather than with the idiotic. The real character of the Institute is often misunderstood; a claim for admission is based on dumbness, when the only claim should be on deafness. Physical defect is imagined to be the misfortune, when it is mental. For years the delicacy of friends and even of physicians, has allowed parents to be deceived until the child is presented at this Institute, when the unwelcome truth must be told. In connection with Mr. Little, Principal of the Blind Institute, I have prepared from the census, a list of imbecile children and youth, which is some protection against the evil indicated, and which shows how large is the class of feeble-minded in the state.

"THE WORK OF THE INSTITUTE.—The design of the Institute is the education of that portion of the youths of the state who, on account of deafness, cannot be instructed in our common schools. That education involves more than pertains to any ordinary school, inasmuch as it combines training which belongs to the home, but which is impracticable in the case of deaf mutes, intellectual culture which is almost the only aim of speaking schools, moral instruction which has been unavoidably neglected, and mechanical training which will secure self support. This combined view exhibits the deaf-mute institutions as unique among seminaries of learning, having a comprehensive unity, and yet an almost endless variety, which is demanded of no other. Thus defined, they give a promise difficult of fulfillment, even before and independent of those difficulties which belong alone to deaf mute instruction. The work is complicated, extended, varied, dealing with minds exceptional and hindered by obstacles peculiar. Too much or too litle may be demanded. It is difficult to estimate it justly. Results may be seen and admired without an appreciation of the processes by which they are reached. But those engaged in deaf-mute instruction have occasion to rejoice in the kindliness of spirit manifested. They are not annoyed with any carping or captious spirit, but are made continually conscious of the sympathy and co-operation of every good citizen.

Institute for the Blind.

From the report of Mr. Thos. H. Little, Superintendent of the Institute for the Education of the Blind, I extract the following items:

"ATTENDANCE.—During the year, sixty-eight pupils have been in attendance, of whom fourteen were not present the previous year; nine have left the school. Fifty-six have come in this term. Applications for the admission of eight more persons have been accepted, and several others are under consideration.

"The parents of six of our pupils have removed from the state during the past three years, reducing our catalogue by that number.

"Instruction.—Instruction has been given, as usual, in literature, in music, and in various branches of industry. * * * Those which are usually styled "common branches," have received by far the greater amount of attention.

"In the musical department three choirs were sustained until spring when one was dropped. In harmony there have been two classes. The orchestra, which at the close of the preceding term numbered seven pieces, at the close of the last term in June numbered fourteen pieces, and was able to play acceptably such music as Meyerbeer's, Coronation March, and Rossini's Overture to Tancredi. In addition to these classes, pupils have received private lessons as follows: upon the piano, thirty-four; upon the organ and melodeon, seven; upon the violin and other stringed instruments, thirteen; upon the flute and other wind instruments, seven. Individual vocal lessons have been given to eleven pupils.

"In the industrial department pupils have been taught broom-making. The smaller boys as well as the girls have learned to make the bead-work commonly taught in Institutions for the Blind. The girls have also learned to sew, knit and make fancy work of various kinds.

"CENSUS.—I have waited with interest to see what number of blind persons would be found in the state by those who took the United States census. Having personally examined the returns, I am able to state that they are far from reliable, many persons being known by me to be blind whose names do not appear as such upon the papers of the census. For example, the returns for the city of Madison give the name of but one blind person as resident there, while there are really no less than six.

"A law was made last winter by our State Legislature, providing for the enumeration by the school district clerks throughout the state, of children excluded from the common schools, by reason of defective vision. It is sincerely to be hoped that this law may afford the means of procuring more

correct statistics, so far as the young are concerned, than we have been able heretofore to obtain upon this subject, and also that it may afford indirectly, the means of communicating with the parents of blind children many of whom are still in ignorance of the advantages, or the terms, or even the existence of an Institution for their benefit."

XXII.—NORMAL SCHOOLS.

These important institutions are in a prosperous condition. The Whitewater normal school is still under the able presidency of Oliver Arey, A. M., and the Platteville school under that of Edwin Charlton, A. M. The Oshkosh school has been placed in charge of G. S. Albee, A. M., formerly principal of the Racine high school and widely known as one of the best educators in our state.

Twelve students graduated in July last at Platteville, and ten at Whitewater.

The graduates of these institutions are filling responsible positions, mainly in this state, with credit to themselves and their instructors.

Nearly four hundred under graduates are engaged in téaching in the common schools with greater or less success.

Institutes in the Normal Schools.

The board of regents of normal schools at their meeting in June last, with the cordial approval of the several faculties, directed that an institute course of six weeks in duration be held at the opening of the fall term of each normal school, for the benefit of teachers who are unable to take the requisite course for graduation. These institutes will doubtless be largely attended, especially by persons living in counties adjacent to the schools. The best facilities will be afforded teachers for obtaining as thorough a preparation, as can be reasonably expected in the short term prescribed.

XXIII.—NORMAL INSTITUTES.

At the request of the teachers of the state, on my recommendation, the Legislature, at its last session, appropriated \$2,000 an-

nually for the support of normal institutes, of not less than four weeks in length, to be held in counties not directly enjoying the These institutes are to be held, benefits of the normal schools. in the summer and fall of 1871, in the following counties, viz.: Calumet, Dane, second district, Grant and Richland (joint institute), Juneau, Monroe, Polk, Portage, Sauk, Trempealeau, Waushara and Waupaca. The following gentlemen, with others equally competent, representing the best instructional talent of the state, have either promised or have positively been engaged to assist the county superintendents in holding these institutes: Graham, of Oshkosh, W. D. Parker, of Janesville, Albert Earthman, of Reedsburg, S. D. Gaylord, of Mineral Point, Samuel Shaw, of Omro, Prof. D. McGregor, of Platteville Normal School, C. H. Viebahn, of Sauk City, Hosea Barns, of Kenosha, W. A. De la Matyr, of Elkhorn, A. O. Wright, of New Lisbon, B. M. Reynolds, of Madison, H. E. Hoard, of Sparta, A. S. Ingalls, of Monroe county, J. S. Hascall, of Portage, Prof. S. S. Rockwood, of Milton and Albert Salisbury, of Brodhead. I am expecting that at least eight hundred teachers will be directly reached by these institutes the first season, and thereafter from one to two thousand. Prof. Charles H. Allen, the newly elected Institute Agent of the Board of Regents of Normal Schools, will have the general supervision of the work.

XXIV.—TEACHERS' INSTITUTES.

Short term or teachers' institutes were held in the following counties, during the last school year: Adams, Chippewa, Clark, Columbia, Crawford, Dane, First District, Dane, Second District, Dodge, First District, Dodge, Second District, Eau Claire, Fond du Lac, Grant, Green, Green Lake, Iowa, Jefferson, Juneau, Kenosha, Kewaunee, La Crosse, La Fayette, Manitowoc, Marquette, Milwaukee, Oconto, Outagamie, Ozaukee, Polk, Portage, Richland, Rock, First District, Rock, Second District, St. Croix, Sheboygan, Trempealeau, Vernon, Waukesha, Waushara and Wood. In the counties of Columbia, Crawford, Grant and Waukesha, two institutes were held; and in Richland and Trem-

pealeau counties, three—making forty-eight in all, which is believed to be the largest number ever held in the state in one year.

Most of these institutes were conducted by Prof. Robert Graham, who has faithfully and successfully performed his duties. At the meeting of the Board of Regents of Normal Schools, held in June last, he was elected Professor of the Theory and Art of Teaching, in the Oshkosh Normal School. At the same meeting, the following resolutions were unanimously passed by the Board:

"WHEREAS, Prof. Robert Graham, having been elected Professor of the Theory and Art of Teaching, in the Oshkosh Normal School, has resigned his position as Agent of this Board; therefore,

"Resolved, First, That we recognize with pleasure, the faithful and laborious services in the institute work rendered by Prof. Graham to the Board of Regents of Normal Schools, and the signal benefits resulting therefrom to the common schools of the state.

"Resolved, Second, That our best wishes for his continued success will go with him in his new and important field of labor."

Prof. Charles H. Allen, a gentleman peculiarly fitted for the institute work, by his tastes and long experience as an institute teacher, was elected agent in place of Prof. Graham, and is discharging his duties with commendable zeal.

XXV.—STATE TEACHERS' CERTIFICATES.

It is a source of great gratification to me to be able to report so large a number of teachers who obtained the above certificates of eminent qualification. Believing that a necessity existed for organizing a corps of professional educators in the state, I have called the attention of our teachers in all proper ways to the desirability and practicabilty of their obtaining the highest certificates known to our law. I appointed Prof. Robert Graham of Kenosha, Prof. G. S. Albee of Racine and Prof. Alexander Kerr, of Beloit, a committee of examination. Twenty persons presented themselves before the examiners in July.

Certificates were awarded to fifteen of the whole number, as follows:

First Grade.—To Samuel Shaw.

Miss Etta S. Carle.

Miss Martha A. Terry.

Thos. B. Brougham.

W. A. DeLamatyr.

J. Alex. Gaynor.

D. E. Holmes.

Second Grade.—To Miss Martha E. Hazard.

Mrs. Mary E. Holmes.

Miss Marion Hill.

Mrs. Frances B. McIntyre.

Hosea Barns.

Charles Lau.

I. N. Stewart.

Miss L. J. Torrey.

I would recommend that limited state certificates good for five years, be given to teachers who shall pass a successful examination in the studies required for a first grade county certificate, with the addition perhaps of one or two more studies.

I believe the effect would be to stimulate many to reach at once a higher standard of qualification and to enter ultimately the highest ranks of the profession through the possession of the unlimited state certificate.

XXVI.—SPECIAL STATISTICS.

Certain amendments of the school code, made at the last session of the legislature, provide for gathering additional statistics in regard to school attendance. The first of these provisions relates to

Children Incapacitated for Instruction.

Chapter 101 of the general laws of 1871 enacts that "it shall be the duty of the district clerk to classify those children who from defect of vision or of hearing or of intellect, (under the heads of blind, deaf and dumb and idiotic), are incapacitated for instruction in the common schools, and report the same to the State Superintendent, who shall publish the same in his annual report."

A proper blank was furnished for each district clerk, but it seems to be very doubtful whether the census of these unfortunate classes of children was taken with any considerable degree of fulness or accuracy. The district clerks have no compensation by law for their services, and the information sought is of a novel and delicate character. From eleven counties no returns whatever are made, though it is hardly probable that they contain none of these unfortunates. The returns from the remaining forty-five counties foot up as follows, including the cities which report separately:

Number incapacitated for instruction from defect of vision	136
Number incapacitated for instruction from defect of hearing	218
Number incapacitated for instruction from defect of intellect	351

The returns are, however, of some value. The Superintendent of the Institute for the Blind has already made practical use of them. It appears that the most numerous of the three classes excluded from instruction in the schools are those incapacitated by defect of intellect. This fact gives additional emphasis to the plea for them which has repeatedly been made in our state—a plea which has been heard and considered in some of our sister states. I cannot but express regret therefore that the bill (No. 73), introduced into the Assembly at the last session, did not become a law, and the hope that the subject will receive favorable consideration at your hands.

Attendance and Non-attendance of Children of Certain Ages.

Alarm having been felt at the large number of persons of school age not in attendance upon the public schools, it was enacted at the last session of the Legislature (section 2 of chapter 169 of the general laws), that each district clerk, in addition to the returns already provided for as to school attendance, shall report "the number of children attending school during any part of the year, between the ages of four and seven, seven and fifteen, fifteen and twenty, respectively; and to this end he shall require and instruct the teachers to enter the ages of all children attending school in the register; he shall also ascertain and re-

port the whole number of children between the ages named residing in the district on the last day of August previous to making such report."

As it would not be known by teachers until the school year was nearly gone that such returns were expected, and as the in-information sought for was of a novel character, it is not presumed that the statistics gathered are by any means as complete or accurate this year as they can be made in the future.

The results obtained are as follows:

No. of children between 4 and 7 years of age in the state No. of children between 7 and 15 years of age in the state No. of persons between 15 and 20 years of age in the state	204, 694
Total number between 4 and 20 in the state	390, 495
No. of children between 4 and 7 years of age who have attended school No. of children between 7 and 15 years of age who have attended school No. of persons between 15 and 20 years of age who have attended school	46, 856 147, 835 40, 858
Total number between 4 and 20 who have attended school	235, 549

It will of course be observed that the total number of school age, as given above, is less than the number given in the summary of general statistics, and that the total number of school age attending school is less than the number there given. The discrepancies arise from the fact that the "special statistics" were not obtained by the district clerks in some cases. ing the whole number of children or school age to be 420,943, as given on page 9, and the whole number who have attended school to be 262,947, the important question is, what proportion of those who attended school were between the ages of 7 and 15? Increasing the number actually returned of this class by the rule of proportion, it will be 159,367 out of 262,947; or nearly fiveeighths of the whole attendance. But the fact still remains that the attendance out of this class is 45,331 less than the whole number embraced in the class; and after making abatement for inaccuracy of statistics, for those in attendance upon other schools and these who have but just ceased to attend school, but

are not without some elementary education, it remains true that a large number of children of proper school age, are not in attendance upon any school. Among them are to be found our juvenile vagrants and offenders, and those who are likely to become such. The majority are no doubt kept away from school through the ignorance, neglect or poverty of parents; but this is precisely the class that should be regarded and cared for as the wards of the state. The subject is commended to your earnest attention.

XXVII.—COMPULSORY EDUCATION.

This matter is attracting general attention at the present time. Although some legislation may be needed upon the subject of vagrancy, and truancy, I do not think public sentiment would as yet sustain "compulsory attendance" upon our public schools. The more prevalent feeling seems to be that we must raise our schools to a higher degree of efficiency before we can sustain any law of this character.

As showing, however, somewhat of the progress of legislation and drift of opinion elsewhere, I make some extracts from the able Report, for 1870, of Hon. E. Ryerson, Chief Superintendent of Education for the Province of Ontario, and from authorities or opinions collected by him:

"Compulsory Attendance at School.—The provision of the law in this matter is the legitimate consequence of the principle involved in the establishment of free schools; for if every man is to be taxed, according to his property, for the public school education of every child in the land, every tax-payer has a right to claim that every child shall be educated in the various branches of a good English education; otherwise it is raising money by taxation under false pretences.

"And, if every man is to be taxed according to his property for the education of every child, and if every child has a right to school instruction, some provision was needed to secure both the rate-payer and the child against the oppression and wrong which might be inflicted by an unnatural guardian or parent. Society at large, no less than the parties immediately concerned, requires this protection; and the protecting provisions of the law, in this respect is milder and more guarded than a corresponding one in Prussia, Massachusetts, and other countries where public school feducation is provided for and guaranteed to every child in the country. According to

against society and his youthful charge is not wilful and criminal. If such a protection in this mild and guarded form is found, on trial, to be insufficient for the purposes intended, a more stringent one can be enacted by the legislature hereafter. But, I believe the law will, upon the whole, secure the end proposed."

"ORIGIN OF THE COMPULSORY SYSTEM IN GERMANY AND SCOTLAND—EX-AMPLES.—The Rev. H. G. de Bunsen, in an address at a recent Social Science Congress, on the Education of Neglected Children, after showing that out of 2,700,000 children in England that should attend the Public Elementary Schools, nearly one million and a half (1,450,000) do not do so, declares that:

"'There does not appear to be any other mode of arresting the fatal progress of this great evil, and of attempting to educate all classes of children, than by making education compulsory in Great Britain—that is, compulsory on the parents, and compulsory on the employers of children; in other words, the state must enforce by legal enactments the attendance of children at school. But let me observe, there are two kinds of compulsion, the one direct, the other indirect. The one, the direct kind of compulsory education, is the law in Prussia, in North and South Germany, in several of the American States, and in several of the Cantons of Switzerland. But this kind of legal compulsion dates from the very beginning of Protestantism in some of the above-named countries, and in the rest it is coeval with their existence as independent free states.'

"The Rev. Mr. Pattison, in his report to the English Commissioners, says, in regard to co compulsory education in Prussia:

"'The compulsion consists practically of a small fine, and the highest testimony that could be borne to the wisdom and efficiency of the law may be found in the statement which is sometimes quoted as an argument against it, viz: That' the school has taken so deep a root in the social habits of the general people, that were the law repealed to-morrow no one doubts that the schools would continue as full as they are now.' Nintyeight per cent. of the population of Prussia are stated to be able to read and write. Education is also compulsory in Denmark, where attendance at school is enforced from the age of seven to that of fourteen, and instruction is given gratuitously to children whose parents cannot afford to pay for their teaching. In Bavaria attendance at the Elementary schools is compulsory for all children until the age of fourteen. In Saxony attendance at school, or instruction under properly qualified teachers, has been compulsory since the year 1835. Public education is said to have reached the highest point in Saxony-every child, without exception, partaking of its benefits. In Baden education is compulsory, and parents are compelled, by

strictly enforced penalties, to send their children to school. In Portugal, by a law enacted in 1844, it is compulsory on parents to send their children to a place of public instruction, but this law, it is said, is not strictly enforced. In most of the Cantons in Switzerland, parents are compelled to send their children to school, or to have them privately taught, from the age of five to that of eight years. Neglect of parents in this respect is punished, in some cases by fine and in other cases by imprisonment."

It may appropriately be noted that the States of Michigan and Texas have recently enacted laws in regard to compulsory school attendance, and that the subject is undergoing consideration on every hand.

XXVIII.—THE COUNTY SUPERINTENDENCY.

This feature of our school system has now been in operation nine years, the first incumbents having entered upon their duties January 1, 1862. It may be regarded as the settled policy of the larger proportion of the states which have a developed school system at all. It is generally considered, by those who are most competent to judge, as the "right arm" of a state school system. Of course its results depend greatly upon the men who are elected to fill the place. Many believe that if these officers are to be elected, it would be better to have the election take place in the spring, in order to separate it more entirely from "politics." Others hold that it would be better to have the incumbents appointed. This is done in Pennsylvania, the several town boards of school directors constituting a county board for that purpose.

But however the office may be filled, it is all important that it be filled with competent men, and these can be secured only by the payment of a reasonable salary. If the salary is small it will not ordinarily command anything more than mediocrity of talent. If there are exceptions to this rule, it is only in rare cases of unselfish zeal for the public good, or because the incumbent expects to devote but a portion of his time to the duties of the office. Such an arrangement is undesirable, and there is no good reason why it should ever be allowed in the older and wealthier counties. It is quite safe to say that where the administration of the office has

not given reasonable satisfaction, a niggardly policy has been content to employ inferior men, or to pay for but a portion of a competent man's time. This could easily be illustrated, but comparisons might seem invidious.

The number of superintendents now in commission is sixty-three, the counties of Dane, Dodge, Fond du Lac, Milwaukee and Rock each having two. At the last election twenty-five old incumbents were re-elected, some of whom have been in the office for several terms, and whose administration has therefore the benefit of extended experience. Three others were in commission by appointment, when elected. A complete list of the superintendents elect, for 1872-3, will be found at the close of the reports of the late incumbents.

I wish to draw attention to these reports, and to those of the city superintendents which follow, as embodying many statements and suggestions of importance. One very common statement is the imperfection and inaccuracy of the reports made by the town clerks to the county superintendents, and especially in the reports made by the district clerks to the town clerks. One remedy suggested for this is a provision by law for paying the district clerks a reasonable per diem for their services. I have adverted to this matter in commenting upon the "special statistics." But a radical cure is to be found alone, I think, in the general adoption of the "town system."

Several of the superintendents speak of the great evils of absenteeism and irregular attendance, and urge the necessity of some laws to insure the elementary education of all our youth.

The following states and territories have a county superintendency: Alabama, California, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New Jersey, New York (in a modified form), Ohio (county examiners), Oregon, Pennsylvania, South Carolina, Tennessee, Texas (each judicial district), Virginia, West Virginia, Wisconsin, Colorado, Dakota, Idaho, Utah and Washington.

XXVII.—THE TOWNSHIP SYSTEM.

All my predecessors without exception, I believe, have recommended more simplicity and unity in our school system. The general drift of intelligent opinion, in this as in other States, has been towards a preference for the "town system of school government" as distinguished from the "single district system." The subject has been so often and so fully discussed in the rereports of this department, that it seems unnecessary to go over the ground again. But as my report is widely circulated among the local school officers, it seems advisable to keep the matter before them, and to this end I make some extracts from discussions of the subject by others, within and without the State.

In a recent number of the Sparta Herald, N. H. Holden, Esq., superintendent elect for Monroe county, writes as follows:

"From carefully reviewing the reports of the Superintendents of Public Instruction for the years 1868, '69 and '70, I am satisfied that the 'township system' as now provided for by statute, but left to the option of each town to adopt or not, would be a material improvement.

"Space is too limited to give more than a very brief outline of this statute, which can be found in the school code, or session laws of 1869, and which should be in the possession of every district and town clerk. This statute, makes each town, one district, so far as relates to the expense and supervision of schools and the hiring of teachers, but leaves it sub-districted as now, for the purpose of separate schools.

"Each of these sub-districts holds annual meetings to elect a clerk and to express its grievances and desires. These clerks constitute a town board of school directors who have entire control of school property, and make all needful provision for the schools. They elect from their own number a president, treasurer and secretary, who constitute an executive committee who hire teachers and perform other duties. To the secretary is given the general supervision of the schools of the town, and under the direction of the board of directors, he shall grade the schools and assist the teacher in classifying, and is required to visit each school twice during each term. All persons interested in this educational work should examine this 'town system' as provided for by statute, and if persuaded that it would be an improvement, take the necessary steps to give it a trial.

"1st. It would produce a uniform rate of school taxation, making school privileges more equal without imposing excessive burdens upon any individuals.

- "2d. It would create a more efficient school board for selecting and assigning teachers.
 - "3d. It would secure for the schools better teachers.
 - "4th. The schools would be uniformly and better graded and classified.
- "5th. It would tend to improve school-houses, and provide each of them with what is essentially useful.
- "6th. It would dispense with a large number of district officers and lessen the aggregate expenses of schools.
 - "7th. It would promote uniformity of text-books.
- "8th. It would allow of a central school, of a higher grade, for the benefit of those desirous of studying higher branches, than are now taught in common schools.
- "9th. It would assure an efficient system of school supervision for each town.
- "I have canvassed the objections that might be urged against the change, and find them all easily answered. And if the change would be productive of a part only of the benefits enumerated, it would unquestionably be a desirable one. This system is no new fangled experiment. It has been tried successfully, and is now the system in use in several of the states, and is attended with most satisfactory results.
- "Then let us catch an inspiration from the motto of our state, 'forward' and take each improvement by the forelock, and lead the van of our sister states in our educational system, and not to be so cared by the 'spectre innovation' as to neglect to profit by the progressive wisdom of the last half of the nineteenth century, and go dragging at the wheels of progress.
- "The change to the 'township system' is very easy, if desired by a majority of the electors of the town, and if, on trial, it is unsatisfactory, it may be abolished and the old system reinstated.
- "On petition of ten electors for the change, the town clerk gives notice that a vote by ballot will be taken at the next town meeting or general election for and against the change—but for the details of the law I refer you to the school code or session laws of 1869. This change is not a reinstating of the old town superintendency system. However, it does purpose to establish a more thorough supervision of the schools which is rendered necessary, not from a failure of county superintendents to perform efficient work, but from the impossibility of one individual properly supervising the entire schools of a county. For instance, in Monroe county, there are about 128 schools or departments, and the usual length of a term of school being 66 days, it would necessitate the visiting of two schools per day, without loss of time, in order to visit each school once only during each term, which is a physical impossibility in this county. And these visits would be too short to be of much practical benefit.
- "A glance at these facts will show at once, that one person cannot possibly give each school that time and attention necessary to its best success.

This deficiency is remedied in the "Township System," by supplying in each town the much needed addition to the superintendency force."

A. F. North, Esq., an intelligent teacher and town officer, and superintendent elect of Waukesha county, thus presents the subject in reference to "Inequality of Taxation under the 'District System:"

"The foundations of our free institutions were laid by the Puritans, when they made this compact in the May-flower, viz.: 'That every settler should have equal rights, and that they would obey the laws they should make for. the common good.' This sentence contains the essence of all free government. But they saw clearly that the stability of such a government as well as the well-being of the individual could only be maintained by universal education, and they took measures at an early date (1636) to secure this end by action of the state. Enlightened statesmen throughout the world are bearing testimony to the soundness of these views, and in spite of bigots and reactionists, are pressing forward to their attainment; and announce as the safety of the state depends upon the intelligence of the people, the state must secure this by popular education—in other words the property in the state must educate the children in the state, and this with at least some good degree of equality. It is upon this basis that the school fund is distributed. It is apportioned, not in the ratio of the property in a district, but upon the number of children to be educated therein. And this is the true principle, and should be of general application. But it is not so, and very few persons are aware how widely different from this is the fact with regard to the distribution of the burden in our towns under the present district system.

"The annexed table will show its operation in Pewaukee, Waukesha county, which is believed to be a type of the condition of things, generally, throughout the state:

•	No. of Scholars.	Value of Property in District.	Amount per Scholar.
District No. 1	221	\$ 235,090 00	\$1,068 00
District No. 2	44	124, 563 00	2,376 00
District No. 3	92	172, 285 00	1,861 00
District No. 4	79	61,593 00	784 00
District No. 7	47	47,080 00	1,001 00
District No. 8	29	72,922 00	2,860 00
Jt. Dist. No. 9	76	116, 198 00	1,529 00
Jt. Dist. No. 10	48	75,209 00	1,566 00
Jt. Dist. No. 6		105,024 00	1,083 00
Whole town	732	\$1,008,964 00	\$1,378 00

"By reference to the above table, it will be seen that while in the whole town there is \$1,378 for each scholar; in District No. 4, there is only \$784, about one-half this amount and in District No. 8, there is \$2,860; over double the average amount. I hope to be able soon to show how this matter stands in the other towns in this county. Such a state of things is a conclusive argument in favor of the township system."

I also quote a few paragraphs from a report of Hon. A. E. Rankin, Secretary of the Vermont Board of Education, and may add that Vermont, in common with other New England States, is moving in this direction, following the lead of Massachustts, where the system is now fully established by law, to the manifest great improvement of the common schools of that state:

"While we strive assiduously so to economize as not to increase the expense of our educational system, we do not take proper pains that the money which is annually expended shall be so applied as to secure the largest returns.

"Let me enumerate some of the prominent obstacles which are in the way of the greatest efficiency of our schools:

- "1. Total lack of or insufficient supervision.
- "2. Constant change of supervision.
- "3. Poorly qualified teachers.
- "4. Constant change of teachers.
- "5. Lack of interest in schools, on the part of patrons.
- "6. Employment of relatives and favorites without regard to qualifications.
 - "7. Too small schools in many districts.
 - "8. Too short schools in many districts.
- "9. Employment of immature and incompetent teachers in small districts.
 - "10. Poor school-houses.
 - "11. Irregular attendance.
 - "12. General lack of facilities to aid the teacher.
 - "13. No schools at all in many districts.
 - "14. Lack of proper classification.
 - "15. Pupils study what they choose and not what they ought.
- "These twice seven and one plagues of our common school system will be recognized by every one who has had any experience in connection with the public schools of the state.

"If it should be shown that this nest of evils which so impairs the efficiency of our schools could in some measure be be removed by a radical change of system, no one surely would oppose such change.

"I am confident that these evils may in very great measure be alleviated by a change in our system of public schools. I believe that the adoption of what is called the town system, in contradistinction from the district system, would tend largely to diminish them."

In conclusion, gentlemen, I commend to your earnest consideration the needs of our common school system, as partially set forth in this report. I feel assured that you will aid, by timely and judicious legislation, as well as by your personal influence and encouragement, every effort made by the friends of this system to develop and perfect it, so that Wisconsin may continue to stand among the foremost states of the Union in her devotion to the cause of popular education.

SAMUEL FALLOWS, Superintendent of Public Instruction.

REPORTS OF COUNTY SUPERINTENDENTS.

BARRON COUNTY.

OLIVER DEMERS, SUPERINTENDENT,

The people of this county take an interest in the cause of education, and are generally satisfied with our new township system of school government, and nearly all our teachers are doing their work not only satisfactorily, but well. During the past year, I visited nine schools, making seventeen visits, and I found always. the teachers well encouraged to put their schools into a higher standard of excellence. But the people of some sub-districts are complaining, and they have good reason too, to complain, about their sub-district clerks, on account of their neglecting school affairs. It is very easy to show that they are neglecting their duty too much, by refering to my annual statistical report. There are twelve organized sub-districts in the town of Barron, nine of which have been taught by qualified teachers during the year ending August 31, 1871, but only five out of the nine have been reported, and in three of the sub-districts no school has been held, although they were organized in March, 1871, at the annual meeting of the town board of school directors, which was soon enough for these districts to have five months schooling before the 31st of August. The sub-district clerks ought to receive a compensation for their services of about one dollar or one dollar and a half for each day expended faithfully for the education of our youth.

There is another topic to which I would refer in some brief re marks: that is, it seems to me, and to all friends of education, that a provision ought to be made as to compel the parents and 4—Sup. Pub. Ins. (Doc. 12.)

guardians of pupils to send them to schools; that is, pupils from seven to fifteen. Pupils from four to seven don't make much progress in learning, and they cannot go to school regularly, when they are far from the school-house or in bad weather, or over bad roads. But I am not speaking of them, nor of those from fifteen to twenty years of age, because their help is too much needed at home; I am speaking of pupils from seven to fifteen years of age. They can very well attend schools every day, and their help is not much needed at home, and I say it is a shame for parents or guardians to retain such scholars from going to school; they ought to be fined for every day, or every week, or every month that they may retain such scholars from school, unless they have a good reason for so doing.

BUFFALO COUNTY.

ROBERT LEES, SUPERINTENDENT.

My statistical report which I forwarded a short time ago, is imperfect in several respects, especially in reporting the number of children between the ages of 4 and 7, 7 and 15 and 15 and 20; as will be seen, the number of children reported between those ages is 4,098, while the total number of children between 4 and 20 is 4,443. Without doubt, the latter amount is the nearest to the truth, for some district clerks are known to have omitted reporting the number of children between the different subdivisions of 4 and 20.

The financial statement is also untrustworthy, for it makes out the receipts to be \$25,382.46, and the expenditures, with the amount on hand, to be \$27,905.13; so it appears that district treasurers are losers to a considerable extent. The fact is, district clerks seldom examine the treasurer's accounts before reporting, and to save trouble, guess at the receipts and disbursements. The only items that are correct enough to be relied on, are the teachers' wages. One would naturally expect that clerks would report the amount expended on building, correctly, but such is not the case. The whole amount expended in the county

for building and repairing, as reported, is \$1,477.34, when in fact, there has been at least three times as much expended for that purpose; seven school houses having been built within the year, the poorest costing over \$200 and the best over \$800. The total amount expended for school purposes, as reported for the year, is \$20,075.11, when \$25,000 would be below the amount.

COMPENSATION OF DISTRICT OFFICERS.

It may be asked, who is to blame for these imperfections? I certainly do not hold myself wholly responsible, as I have written to town clerks to be more careful than usual, and to have district clerks correct any apparent errors in their reports. However, the district clerks in most cases claimed they had spent all the time they had to spare on the report, and refused to do anything more about it. Now, it seems to most of us in this county that clerks are excusable, because there are but few of our farming population able to lose from one to three days during the stacking season, for the purpose of taking the census of those of school age, and then pore over the treasurer's book until everything looks blue, (and generally the longer they look the bluer it gets) for nothing. How would our town and county offices be filled if we paid the incumbents in the same coin? Then why make school district officers an exception to the general rule that "The laborer is worthy of his hire?" I do not claim that salaried offices are always well filled, by any means; but they would undoubtedly be much worse attended to if the honor was the only recompense attached to them; and I consequently believe that our reports would be more reliable, and district affairs in better shape, if we paid district officers for the time lost in attending to their duties.

SCHOOL HOUSES.

As I have already stated, there have been seven school-houses built within the past year. Those in districts No. one of Glencoe, No. one of Dover, No. four of Gilmanton and joint district No. one of Modena and Gilmanton, are tasteful and comfortable buildings, constructed according to the plans in the school code,

and they speak volumes for the public spirit and thriftiness of their respective districts. The village of Mondovi is also building a school-house costing \$2,800, designed for a graded school of three departments, which will be completed in time for the winter term of school. When furnished, it will cost nearly \$3,500, which is six per cent. of the assessed value of the real estate in the district. This speaks sufficiently of itself for the enterprise of the inhabitants, and shows their zeal in matters pertaining to education. I am sorry to say, however, that there are a number of districts, perfectly able to build substantial and comfortable school-houses in place of the small, tumble-down concerns honored by that name, but which are afraid of the additional taxes, and go on term after term crowding their children together, neutralizing the efforts of the teacher, and absolutely wasting time and money for the want of suitable buildings. The most notable examples of this kind are to be found in the town of Nelson, and more especially districts Nos. one and two of the same town. It would be an act of mercy to the children to condemn the old school-houses, and thus compel the people to build new ones.

1

APPARATUS.

But very few of our school houses are as yet provided with outline maps, globes or other necessary adjuncts to a well organized school, and most people seem to think they have done their whole duty when the school-house is finished and the teacher hired, never seeming to consider that the teacher's services can be rendered doubly valuable by spending a small sum, not exceeding a month's wages of the teacher, on maps, charts, numeral frames, etc., and at the same time add to the attractions of the school room. Our county being comparatively new, everything can not be provided for on the start; but it is to be hoped that the day is not far distant when school apparatus will be considered as essential as a comfortable school room.

EXAMINATIONS AND CERTIFICATES.

Nine public examinations have been held within the year, and 111 teachers licensed out of 152 applicants; but I regret to say

that one-fourth were licensed at private examinations. This is caused by the scarcity of teachers, and clerks had to hire teachers from abroad, who were unaware of the time of the public examinations, and consequently had to be examined privately. Of the 111 certificates granted, 1 was of the first grade, 13 of the second, and 97 of the third grade, including special certificates, a few of which I had to issue so as to provide teachers for all the schools. Most of those who are following teaching are keeping abreast of the times, as is shown by their examination papers, and for such there are plenty of opportunities to teach at fair wages, male teachers averaging \$43.16 per month, and female teachers \$30.62.

INSTITUTE.

An Institute of four day's duration was held at Fountain City during the last week of September, conducted by Prof. C. H. Allen, whose ability and genial manners pre-eminently fit him for the arduous position, as one and all who were present are willing to testify. The teachers unanimously agreed that they had spent a pleasant and profitable week of it. Lectures and addresses were delivered in the evenings, to large and attentive audiences, by Prof. Allen, Hon. A. Finkelnburg, Hon. Edward Lees and George Harper, Prof. Allen's lecture on Chemistry being especially instructive and entertaining. Interesting essays were also read by R. D. Thomas, formerly principal of the Fountain City, school, and A. H. Pfund, principal of the Alma school. It is believed that the influence of the Institute will be felt in our schools this coming winter, and that henceforth it will be a standing institution in this county.

In conclusion, I believe the educational interests of the county have not retrograded during the past two years, and I hope their progress will be accelerated by the labors of my successor.

BURNETT COUNTY.

W. H. PECK, SUPERINTENDENT.

Since my last report, several improvements have been made in the school-houses, both inside and out, and one, on an acre lot, fenced in. There is a general wish to keep pace with older counties, as fast as means will permit, and for the engagement of competent teachers. At present, we have but three schoolhouses; but other districts are talked of, and will be established shortly. Many are anxious and willing to give their support for that purpose.

CALUMET COUNTY.

ľ

A. W. HAMMOND, SUPERINTENDENT.

The accompanying abstract of the town clerks' reports is not so reliable as I had hoped to have made it. The census report in columns 5, 6 and 7 of general statistics, does not at all correspond with that in column 16, and in a few districts the financial statements were estimated instead of being compiled. All items which could be gathered from the teachers' register, I think are reliable.

I can safely say that the condition of the schools of this county has never been so prosperous as at present.

SCHOOL-HOUSES.

The increase of school-house property for the year has been full 22 per cent. of the whole amount reported in 1870. The whole amount so invested now is \$35,456, which would give an average of \$545 to each district. A fine school-house, built of stone, has just been completed in Chilton, at a cost of \$6,000, and three others of respectable pretensions are under contract.

We have a county teachers' association, which is doing good work. I have made it a practice of devoting one day, at each of my public examinations, to Institute work.

NORMAL INSTITUTE.

We have just closed a Normal Institute of four weeks, holding at Chilton two weeks, and then at Stockbridge the same length of time, thus passing the good things around. At this Institute Capt. De La Matyr, of Elkhorn, and Rev. A. O. Wright, of New Lisbon, are responsible for more good work than has ever before been accomplished in the same length of time in this county. The great benefit was mainly owing to the time given for the accomplishment of it. Give us at least four weeks, each year, to be devoted to Institute work, is the prayer of all our earnest teachers. Our people need more of these educational gatherings in their midst to overcome their egotistic and fossilized notions.

COUNTY SUPERINTENDENCY.

Formerly there was considerable prejudice existing in this county against the county superintendent system, but for the last three or four years I have not heard an argument raised against it. I have done so much "field work" in the county, that my turnout is known by every school-boy and citizen in it; not from its attractiveness, I assure you, but from its frequency in their neighborhood. In fact my horse has got to be next thing to a nuisance, for he will turn up at every school-house.

CHIPPEWA COUNTY.

JOHN A. MACDONALD, SUPERINTENDENT.

In looking over the reports of county superintendents for 1870, as published in the annual report of the Superintendent of Public Instruction, we cannot fail to observe in them cause for congratulation. Never was the public mind more alive on the question of education than it is to-day. It is the "question of questions," claiming precedence of all others, and one that should enlist the co-operation of every good citizen. It is not a question of party—for it should stand far above the jarring discords of sectarian or political strife. It is the great national question of of the day.

PROGRESS.

The inhabitants of this county, living on what may be called the outskirts of civilization, are becoming yearly more interested in educational matters. School-houses more suitable for the purpose intended, are supplanting the rustic log dwelling. Globes, maps, charts, and other useful appendages to a school room are in demand; men are now being called to perform the duties of officers who feel an interest in their schools.

Four years ago we had 37 organized districts; now we have 47 with 4 joint ones. The number of children between four and twenty years who attended school last year, exceeded the number four years ago by 600. The average wages of male teachers for the last few years, have increased from \$32 to \$47 per month.—And the total amount received last year by the eight townships, (that is our number) for school purposes was \$26, 969.03, exceeding that received four years ago, by \$12,952.89.

One township alone, consisting of 12 districts, has expended the last year in globes, maps, charts, library and writing material, \$1,200. Another, in a distant part of the county, has furnished one of their schools with Andrews' improved school desks, reading charts, and writing material. Much of this progressive spirit is to be attributed to the deep interest that the school officers in these two localities take in school affairs.

During the last two years I have issued to school directors, teachers and parents, eight printed circulars. In these I pointed out the more prominent defects, which then existed, in connection with their schools, and suggested what I considered proper remedies: a proper system of classification, uniformity of class-books, the advisibility of introducing reading charts, and the necessity of providing scholars with writing material, were each urged upon their notice as forcibly as I could.

INSTITUTES.

Since my report of 1870 was forwarded, I have had two Institutes, both of which were well attended, and each continued with unabated interest, for an entire week. In conducting these I was ably supported by several talented teachers, who acquitted

themselves creditably in the different branches to which they were assigned.

CERTIFICATES.

From December, 1870, until the present month (Nov.,) I have granted 96 third grade certificates; of these a few were special.

CRAWFORD COUNTY.

M. E. MUMFORD, SUPERINTENDENT.

In making my annual report, I find much difficulty arising from incompleteness and errors of town clerks' reports. With two exceptions the financial statements did not balance, while several were very imperfect and inaccurate in the footings, etc. From experience I know that district clerks transmit very incorrect statements to town clerks, and it becomes almost impossible for the town clerk to get correct statistics without calling on the district clerk in person. Very few of our districts pay their clerks for services rendered. In many cases this results in choosing persons wholly incompetent to perform the duties of the office of district clerk. I cannot understand why district officers should not be paid for their services, as well as other persons who serve the public.

Generally speaking, upon the clerk depends the success of the school. If a clerk has fair abilities, liberal views and is not fearful of losing a few days in looking for an efficient teacher, he will be enabled to secure the services of a competent person to teach the school. If he waits, however, for teachers to apply for the school, the most successful teachers are all engaged before he has an application. The resulting consequences are, he accepts the first so-called teacher that applies, and the people's money is worse than thrown away and the time belonging to the children is wasted. I am somewhat encouraged, however, by the manifested feeling of interest on the part of a large number of district clerks in the county as shown in their efforts to secure the services of teachers having good reputations as instructors.

TEACHERS.

Many of our teachers, I think, fully realize this, and are endeavoring to fit themselves for the duties of their profession.

Very little attention has been given to "theory of teaching" in our county until recently; but I am pleased to say, a large number of our best teachers have taken up the subject with a view of improvement, feeling sensibly that they lack the normal training and instruction received at the state normal schools.

INSTITUTES.

During the past school year we have held two teachers' institutes. These have been sources of profit and pleasure, as by interchange of ideas we have been mutually benefited in many respects. The oftener teachers can meet for the purpose of discussing the different phases of education the more effective they will be as instructors.

SCHOOL-HOUSES.

Several fine school houses have been constructed during the present season. The Wauzeka village school-house has cost about \$3,000, and is nicely furnished with finished furniture from Sterling, Illinois. At Gay's Mills a building has been erected after plan No. 1 of the school code; cost about \$1,500, with same kind of furniture as Wauzeka. Marietta village rejoices in having a new school-house in place of the old shell. Several other villages will build school rooms next year. The public schools at Prairie du Chien are in a fair condition, and have excellent teachers in charge, but many regrets have been expressed by the enterprising portion of the town in consequence of the failure to erect a large building for the establishment of a union high school. This town can well afford the expense of such a school, and the friends of general education deplore the lack of unity in this matter. Let the enterprising ones make another effort at sometime in the future.

WORK.

During the year I have made 125 visits, and think (without

wishing to be egotistical) some good results have followed. I have been cordially received by teachers and parents, and a general feeling of hearty co-operation seems to exist.

Seventeen examinations have been held during the school year, at which 150 applicants were present. Of this number 115 received full certificates, or limited certificates, for six months. Last year I was troubled considerably by applicants for private or special examinations. This fall I began my examinations the 11th of September, and will close the 22d of November. This virtually puts an end to special examinations, as it is not reasonable to ask for a special examination before the public examinations close. As I depend more on oral than on written examinations, I do not need many different sets of questions.

FOND DU LAC COUNTY.

D. B. LYON, SUPERINTENDENT.

The following table will show the number of children over four and under twenty years of age in the county; the number that have attended school; the number of days taught; the number of teachers employed during the year; the average wages per month; the cost of school houses, and the amount paid out during the year for educational purposes, including teachers' wages, buildings, repairs, etc.

Whole number of children over 4 and under 20 years of age in the town. Number over 4 and under 20 who attended district school. Number of days school has been taught. Number of teachers employed.	8, 674 8, 779 31, 463
Average wages of male teachers	41 50 25 00
Value of school houses	

The number of children who have attended school is greater by 1,007 than the number reported last year.

A great evil still exists in the irregular attendance of many who for the most part of the time might be kept steadily in school. It is encouraging, however, that this evil is being gradually overcome by the improved accommodations provided, and the tact of teachers in rendering their school rooms more attractive, and their instruction more pleasing and practicable.

As a rule the schools have been making satisfactory progress during the past year. It is true there have been some sharp district quarrels, which, for the time being, were regarded as calamities by many; but, as in the material world, there can be neither heat nor light without the operation of contending forces, so it may be presumed that humanity could not be greatly enlightened, or comfortably warmed, without these occasional quarrels. It is scarcely possible for the mission of education to be wholly peaceful. The age is too active to allow ignorance, however blissful, to repose in endless tranquillity.

IMPROVEMENTS VISIBLE.

As yet the country is not distinguished for its high schools or costly establishments of learning. These are questionable luxuuries that the people have not provided. But no one, we think, who takes the trouble to look about the country, will fail to discover external evidences of improvement, such as we gladly hail as tokens of enlarged views and liberal intentions in respect to our common school system. A number of neat and commodious school-houses have been built during the past year. Many school yards that were formerly open to the commons, have been enclosed. Some have gone so far as to plant shade trees within the enclosures, and begin the work of adornment, and a few have followed the recommendation, intended to be general; that is, to provide a good well of water in every school yard. Water is a great civilizer, and I have not hesitated to recommend more water, for the benefit of every school in the country, which other_ wise might be left unwatered or dependent on the scanty supplies drawn from wells and cisterns remote from the school room.

IMPROVEMENTS INVISIBLE.

Since my last report the county has been divided, in respect to its school system, so that we are to have two superintendents in the place of one. Many persons have disapproved of this division, as having taken place unexpectedly, and without knowledge or consent of the people concerned. I trust, however, that the reasons for this measure which as yet lie hidden from the masses, may scon become manifest. It ought to be true, in reference to school management, the same as it is in reference to all other matters, that two heads are better than one, and in the matter of visiting schools, especially, the field is ample, and two superinintendents may become eminently useful. And if this department of labor is to be left wholly to county superintendents, there is no telling how many will be needed for that purpose. recently been informed that still further improvements have been proposed by our county board of supervisors, which is to return to "the old township system." I presume the public may be reluctant to acknowledge the wisdom and philanthropy of this measure also. It might be surmised that the more we multiply offices of this nature the sooner they may be brought to con-It is true, the honors and rewards of office are desirable, and no deserving persons in the county should be left wholly unhonored and unrewarded. But when we consider fully the educational interests of the county, (and, indeed, they should be considered as fully as the criminal affairs of the county, which have to be managed with some degree of dignity,) and the attendant costs, we ought to surrender the foregoing advantages for their sake. It is not best to be extravagant in our notions of education. We wish all things in the county to occupy their true position. But human nature is imperfect, and human society may become like an inverted pyramid, with its top, which should point heavenward, buried in the mud.

TEACHERS AND INSTITUTES.

The number of persons examined as teachers during the past year has been 498. Of these 244 received third grade certificates; 27 received second grade certificates, and first grade certificates were awarded to 3. The average wages in the county has been \$41.50 per month for male teachers, and for female teachers \$25.00. The most of our schools are taught by male teachers during the season of winter. The ladies take the field during the season of summer, no one disputing their natural rights.

As a class, our teachers are wakeful, and aspiring to larger growth. Quite a number have recently undertaken a more extended course of instruction, either in the Normal school at Oshkosh, or the College in Ripon, and a short time since, if my memory serves me, full half a score of them expressed their entire willingness to assume my position, and carry on the labors from which I have waited to be relieved. We accept this consideration as an evidence of the growth and good will of our teachers, and cordially transfer our responsibility to those whom the public have selected for that purpose.

There have been three Institutes held in the county during the past year—one in Ripon and two in Fond du Lac. The first was conducted by Prof. Robert Graham, now of the Oshkosh Normal school. The second and third by Mr. and Mrs. Holmes, and Mr. Fowler, one of our own teachers, and a young man of much promise.

These Institutes have become a marked feature in the educational system of the county, and teachers have learned to look to them as the sources from whence they derive much of the inspiration and encouragement essential for their peculiar work.

SCHOOL DISCIPLINE AND INSTRUCTION.

Unquestionably, these are dainty times in which we live, and public sentiment throughout the land generally favors a sugarplum sort of education, as more in accordance with the taste and disposition of society. Our children, particularly in the cities and towns, have grown delicate, and have to be handled with more gentleness and care than formerly, in order that they may not be injured in respect to their sensibilities and tender frames. Nor has it escaped our observation that many, in proportion steps they become intellectual, cease to be sensible and useful.

I have taken pains, in the past four years, to remind parents and teachers of these facts, and to recommend such active measures as might remedy these defects. In some portions of the county it has become customary for school children to rise and remain standing for a moment whenever a school officer or visitor is introduced in the room. I approve of this custom as contrary to the prevailing tendencies of this age, and as one of the gentle ways of teaching Young Americans the lesson of respectfulness and propriety. Respect for superiors and obedience to the law should be held boldly up before the young of this age, and the parent or teacher who fails in this overlooks the first elements of good citizenship.

The loss of this principle from the household and schoolroom is the fruitful source of all those frightful evils that pervade society and threaten to overthrow the institutions of the land. The school instruction of the land is too exclusively intellectual. The schools are looked upon as the place where brains, and only brains, are to be treated by master workmen employed for that purpose. New branches of study are added, and books are multiplied, world without end. Mathematics is the leading article in school, and it is not uncommon to find boys who have run to seed in mathematics before ever their literary tastes have sprouted, or their moral natures received the sunlight.

Certainly the world has had enough of education if it means that the wits of children are to be treated as so many pin points which are to be polished and sharpened in order to pierce, or if it means that they are to be fed and fumigated and bethumped with science continually for so many years, until they are spurred into a fast gallop to run the race of life quickly. There is no telling how much the human race has been damaged by such systems of nonsense. I venture the remark that society has never received one-half the injury from the native ignorance prevailing in its midst as it has from the sharpened wits of those who have undergone these mistaken processes of education. I trust, however, that these errors in mental discipline and training are yearly becoming less, and that the time is near when we shall treat the child more as a human being, having a body and a soul as well

as a brain, and that instructions adapted to the nature and wants of each will be given in just and even proportions. If we have exalted the intellect, we should attend more to building up the human body and expanding the soul with the truths derived from the great book of nature which God unfolds and fills with living lessons of wisdom.

VAGRANT CHILDREN.

It is a question of public policy what is to be done with the idle and vicious children, a few of whom are left in every community and who attend no school, either public or private.

This is a matter which should concern all the members of the community as well as officers of schools.

There are laws in our statute books against noxious weeds, as burdocks, snapdragons, etc., forbidding their growth. Possibly these laws might admit of an extended application, or be so amended as to embrace all idle vagabonds who are growing up in the midst of society without the benefits of good breeding or instruction in school. The time is coming when society will have to care for young vagrants, or to be cursed with old villians. And when we consider how much more it costs to care for one old villian than for a dozen children, the argument becomes strong in behalf of the children, even on economical principles.

CONCLUSION.

With this report will close my official connection with the schools of the county. The consideration and many kindnesses extended to me by the teachers and citizens of the county I shall always remember and esteem as my highest reward. As a private citizen I shall not cease to think, and act, and exhort, if need be, in behalf of the schools and nurseries of the young, believing that our dearest interests and hopes of society should center in them. Indeed, the preaching as well as the teaching of the age, should be brought nearer home to the cradle. Human cultivation is mostly lost, bestowed on old oaks and hardened sinners.

As a people we grow out of our child life too soon. We put away childish things in haste to put on the pomp and pride of society. But what is greatness, and grandeur, and glittering adornments of wealth? What are railroads and cities and gorgeous palaces of wealth? A few months since we beheld a city rejoicing in grandeur, and nature itself in full robed beauty and bloom. How suddenly the scene of beauty became a desolation. If heaven withholds its rains, cities, forests and human habitations afford mankind no certain protection, but may furnish food for the fiery elements of destruction.

These are God's lessons to the age. As wise men and christians, let us fear God and uphold these sacred principles and institutions that tend to improve our civilization and promote personal and social purity. We shal! exalt ourselves in proportion as they are exalted, or we may degrade ourselves in proportion as they are degraded.

DODGE COUNTY—EAST DISTRICT.

J. A. BARNEY, SUPERINTENDENT.

I find the same difficulty in arriving at anything like accuracy, in my report, that I found last year. The financial statement is unreliable, only one or two town clerks report the same amount of funds on hand to commence the year, that was reported at the close of last year. The number of children reported between 4 and 7, 7 and 14, and 14 and 20, is wholly incorrect, many districts not reporting at all upon it, and it does not compare at all with the whole number between 4 and 20. Town clerks experience the same difficulty in getting correct reports from district clerks, and very often the faults are as much with the district treasurers, as with the clerks; they keep their accounts in such shape, that it is impossible to make a correct statement from them. It does seem as if some method could be adopted by which this trouble could be avoided. Incompetent persons are often selected to fill these positions, and in fact those who are qualified cannot well afford to devote the time necessary to prompt performance of their duty, without fair compensation 5-SUP. PUB. INS. (Doc. 12.

therefor. If the people of each district would elect their best men as district officers, and pay them a reasonable sum for their labor, I think we should have less reason to complain of these matters.

The whole number who have attended during the year, as reported, does not vary much from last year's attendance; but in this as in other particulars, our reports are incorrect. There are twenty-six private schools reported, but there are at least thirty in the district.

EXAMINATIONS AND CERTIFICATES.

As I have strictly adhered to the idea advanced in my last report, of "refusing to grant certificates where qualification does not exist," the number who have failed is necessarily large. September 1st, 1870, to August 31st, 1871, I held ten public examinations and examined 202 applicants, of whom four obtained first grade, two received second grade, and ninety-nine received third grade certificates. During that time I granted private examinations to thirty others, of whom thirteen failed; making 232 applicants, of whom four received first grade, two received second grade, 116 received third grade certificates, and 110 failed. Several of the latter received special certificates upon request of district boards. Many who failed last year, came forward and were successful this year; while some who passed then failed There is a disposition among many of our teachers to qualify themselves for the higher grades, and nearly all are working with a will to raise their standing.

Our Institutes have been well attended, and productive of much good.

WORK.

I have made over a hundred visits during the year, and have everywhere met with a cordial reception from both teachers and patrons. I have endeavored during these visits, not to find unnecessary fault, nor to discouaage either teacher or pupils by too severe criticism, but rather to cheer and encourage them in their work, not hesitating to point out any improvement that suggested itself, or to commend what I saw deserving commendation. Upo

the whole I am well pleased with the progress our schools are making. We have many good teachers, and of course some poor ones; but the teachers of the county will, I think, compare favorably with those of any other, and if we can keep public opinion on the march, there is no reason why we may not have as good schools here as anywhere in the country.

DODGE COUNTY—WEST DISTRICT.

L. M. BENSON, SUPERINTENDENT.

For statistical information I must refer you mainly to my annual report, which is as correct as I could make it out of the materials placed in my hands. The reports received from some of the town clerks were very inaccurate and incomplete. Very few of the district clerks make correct reports to the town clerks, therefore the town clerks are unable to report correctly.

I have taken much pains when traveling through my district to induce town and district clerks to make complete and accurate reports, yet for some reason or reasons, we receive but few that are even passable.

WAGES.

The average monthly wages of male teachers in this district the past year has been about \$44.00, and the wages of female teachers about \$26.00. The whole amount paid male teachers in this district during the last school year was \$11,684.78, and the amount paid female teachers \$14,762.50, making in all the sum of \$26,447.28 paid for teaching the common schools in the district.

EXPENDITURES.

This district has paid for building and repairing the past school year, \$4,764.20; for apparatus and library, \$156.70; for furniture, registers, etc., \$796.70; for other purposes, \$4,462.34; making in all the amount expended for the common schools in this district the past school year, \$36,627.31.

SCHOOLS, TEACHERS AND STUDIES.

We have in this district 104 school-houses and 115 departments. About one third of those departments are filled by able and experienced teachers the; balance are mostly young and inexperienced, though there are a few among the two thirds that are in their dotage. The average experience of teachers in this district is only about 14 months. More than two thirds of our teachers are females. They teach nearly all of the schools in the summer, and also many in winter. Our female teachers, generally, commence teaching at about 18 years of age, teach from one to three years, get married and quit the business, (except to teach their own children, which is a great desideratum). Our male teachers, generally, follow the business till something else turns up that will pay better, so that, on the whole, we have but a very few that follow teaching as a business or profession.

Our schools suffer very much on account of this state of things, and he ho will prescribe the remedy must be considered a great benefactor. As long as the lad of 18, or the lass of 16 years, does the teaching mainly, so long will our schools fall short of what they ought to be.

In my opinion, we are requiring too many branches taught in our common schools. The scholar who designs to teach must study some ten or twelve branches. He crams himself with a portion of many of these daily, goes along hastily, and when he comes before the examiner, he fails for want of thoroughness or for lack of knowledge of first principles.

For a third grade certificate, I believe we should require the applicant to be well versed in the following branches only, viz.: orthoepy, orthography, reading, arithmetic (not separating mental and written), geography, grammar (including analysis), penmanship, and theory of teaching (leaving out "art.") For the second grade I would add United States history, physiology, algebra and physical geography. For the first grade I would still add geometry and philosophy.

The "constitutions" I would leave out, not because a knowledge of these is not important or useful, but because our curriculum is far too extensive already for our common schools. A

knowledge of chemistry—as now applied to agriculture—physiology and commerce is, in my opinion, of far more importance than a knowledge of our "constitutions," yet I would not introduce into our common schools chemistry as a branch of study. We are requiring scholars to go over too much in a brief space of time, and this prevents thoroughness and healthy mental discipline. The usefulness of our teachers should be measured by their thoroughness in teaching, not by the number of pages they rush their pupils over in a given time.

SCHOOL LIBRARIES.

All, when young, should establish the habit of close and hard thinking; and in after life great difficulties will be easily overcome. As reported, the whole number of volumes in the school district libraries in this superintendent's district is 741, and the value of the same is about \$835. Our school district library system seems to be a failure, and in my opinion we should have town libraries in their stead.

In the year 1868 I introduced a bill into the Legislature to allow towns to establish libraries. The bill passed, but I think few towns have availed themselves of the privileges granted by this enactment.

CERTIFICATES.

During the past school year I have had about 380 applications for certificates, .counting all grades. I have granted two certificates of the first grade, thirteen of the second grade, 135 of the third grade, and 98 limited in some way. I have rejected 127 applicants. I am trying to raise the standard in this district, gradually though surely, even if it does disappoint a few that are poorly qualified. All of our better teachers and most enlightened people sustain me in this. I have had many applications this year, as usual, for private examinations, and would renew my suggestion made last year, "that each applicant, before requesting a private examination, be required by law to pay into the county treasury the sum of three dollars, and present the superintendent a receipt from the treasurer, showing that said sum had been so paid."

WORK.

I have made about 150 school visits the past year, and have done all that I could to encourage both teacher and pupil in their labor.

For want of numbers I did not hold any Institute, although I gave notice for four short ones. I shall try again in the spring, probably.

In regard to the "township system," I hope (if it is a good thing) that the legislature will soon cause its general, or rather universal adoption. On the whole I can truly say that many of our teachers, many of our school district officers, and many others, are doing all they can consistently, to improve the condition of our common schools, fully realizing that the existence and prosperity of most if not all of our best institutions depend upon a general diffusion of knowledge.

EAU CLAIRE COUNTY.

W. H. LOCKWOOD, SUPERINTENDENT.

It can with truth be said that the schools in this county have not retrograded during the year. I trust they have advanced. One reason at least for this pleasant state of things, lies in the fact that there has been an increased interest in the public mind in the great question of education. And in this direction a superintendent may do much good or he may do much evil. If he is unwilling to work according to a fixed plan—if he seeks only after popularity—if he is very sensitive concerning giving offense—if he is not determined, like the granite hills, to keep up the standard to highest point possible, of the qualifications of teachers, then there will come a collapse, and the people themselves can hardly determine the reason.

The present incumbent does not claim that he has done all this. Here, however, is his ideal, and here he feels a sense of condemnation, as far as he has failed. The things left undone trouble him. All this, however, is predicated upon the supposition that

a public officer has a conscience, and allows it to work, and that there is something more than quarter day to his vision.

SCHOOL-HOUSES.

Many new school-houses have been built during the year. In their construction there has not been consulted a contracted economy, but an enlarged liberality. The feeling has been: "Wo want good school-houses, cost what they may. Let them be well furnished, for our children must have the best facilities possible." We take the fact as a ground for encouragement.

SCHOOL TERMS.

In some of our sparsely settled districts, there has been a weary work to run the schools for five months, which seems to the minds of some all that the law recommends or justice demands.

If three months were the standard, it would be the same. And may I not say if six months were the fixed term, the law would be honored more in the observance than the breach?

COMPULTORY LAW.

Have we not come to the point when this can be said, that the school year must be six months? I have found that in every case where the law drew the reins a little tighter in school matters, those upon whom the heaviest burdens rested, declared they were glad of it. Here the people will stand a great deal of pressure—more than the cautious are willing to admit. When you work down to a man's intelligent convictions on this subject, the response is clear and ringing, "my children must have an education," and he will not even think a compulsory law tyranny, that benefits his children. In this county, as yet sparsely settled, where many are struggling in the midst of difficulties, I am satisfied, by investigation, that more stringent laws would be acceptable,—nay laws that required, on pain of penalty, the forced attendance of children at school, a fixed period of the year. least it may be said that progress in this direction, on the part of our intelligent law makers, is desirable.

IMPROVEMENTS NEEDED.

There is still to be desired an increase of enthusiasm on the part of school boards in visiting and inspecting the schools. A good, hearty revival is needed in this respect. If also there could be a diminution of bickering and quarrelling in many of the districts, upon the most trivial matters in connection with the schools, the Superintendent would often be led to say "laus Deo." As it is, he is often at his wits' end, in his endeavors to mix oil and water. He learns, however, a good deal of mixed human nature.

More wall furniture is still needed, in the shape of maps and charts, and more teaching that shall take the form of the "object system." A heavy adherence to the text book, on the part of teachers, is the source of many intellectual woes.

With these desultory remarks, we conclude with claiming the deepest interest in all that is connected with education.

GRANT COUNTY.

W. H. HOLFORD, SUPERINTENDENT.

INSTITUTES.

I have visited one hundred and nine schools, being a less number than I visited last year; but I have held four institutes of two days each, one of two weeks, and one of four weeks. I also appointed another two days' institute, but owing to the short time it was advertised, too few teachers were present to justify us in calling it an institute. These institutes have greatly benefited every teacher who has attended them, and the schools that these teachers are yet to teach, will thus be greatly improved. And I call upon school officers and patrons of schools to take notice of the fact that the instruction given at the institutes and normal schools causes a very marked growth and development of the teacher in both mind and mould, and, also, a physical develop-

ment (where there is an improvement in action, gesture, manners and bearing, there is physical improvement),—and that it is to these institutes and normal schools that the improvement in your schools, to which I call your attention, will be owing. And after observing the success or lack of success of both classes of teachers, those who attend these institutions and those who do not, if they agree with me that such institutions are the source from which our common schools do and must receive benefit, I still further call upon those interested in schools, and especially do I call upon school officers, to encourage and even urge teachers to attend institutes and normal schools whenever it is possible for them to do so. By the institutes held since last spring, dozens of teachers have been greatly developed and improved, and much better qualified for the work; hundreds should have been thus benefited.

EXAMINATIONS.

I have examined five hundred and ninety applicants for certificates—two hundred and fifty last fall (1870), and three burdred and forty last spring (1871.) Last fall about sixty per cent. "passed" for a full certificate, and last spring about sixty-two per cent. I still continue the practice of teaching, or developing, whatever is suggested by my questions, (and I endeavor to render my questions suggestive of what the teachers should study and know, as well as to render them a test of their ability.) This teaching I do, of course, after I have received the answers of all. I am very confident that this practice is a good one, for even teachers Tho have not attended an Institute nor a Normal School, and who were cace noted as those who do not improve, have improved during the past year; and they tell me and others that this practice is in a great measure the cause of it; but I assure all such that they would have improved far more had they attended a Normal School or an Institute, or both, and then had these suggestions in addition. Another reason for my considering this practice a good one, is that teachers are fast becoming anxious to have it continued. I also notice with pleasure that the average

"STANDING" OF TEACHERS

is gradually improving; this shows that they study, and thus discharge a duty that no teacher should leave undone.

"LICENSES."

Last fall, at the request of school officers, I "licensed" about forty per cent. of those applicants who failed to obtain a full third grade certificate; and last spring about thirty-two per cent. of such. Very few school boards have asked it this fall, and I am glad of it, for I shall grant no license to any person who is unable to take a third grade certificate, while any qualified teacher in the county is unemployed. I think that here the practice of licensing has already been continued too long.

DISCOURSES.

During the year, evening discourses have been delivered by the county superintendent in most of the villages in the county, and in many of the country districts. I think that these meetings have been productive of good, and that in many places the public interest in relation to schools has been improved.

WORK-SALARIES.

This county should be divided into two superintendent districts, and then each superintendent could find more work to be done than he could do. If this cannot be, the county superintendent should be allowed an assistant. Had I an assistant, I could keep him as busy the year round as a farmer in harvest; and that, too, at something that would be very beneficial to the schools. I am aware that this would cost something more than now, but I feel quite sure that if both would do their duty, the people would be better satisfied to pay the salary of the two than they now are to pay that of one.

I am also aware that some complain that the salary of the county superintendent adds much to the taxes, and benefits the schools but little; yet I feel very confident that if all such persons will look over the whole field, note carefully and without prejudice the improvement in our schools as a whole, within the

last ten years, give this system credit for all it has done in the matter of general improvement, and give it credit for that which is, so to speak, even now budded and ready to blossom for the future improvement on what we now have, and then count the cost, they will all say that much has been done, and that little money has been used in doing it. This county contains nearly 39,000 inhabitants. Now, if there were only 38,000, a tax of three cents to each person would pay a salary of \$1140.00; of four cents each would pay a salary of \$1,520,00; of five cents each, a salary of \$1,800. Thus a salary of \$1,000.00, my present salary, costs less than three cents to each person; and a salary of \$1,800 would just buy each one of us a five cent cigar. I think that I know that any good, live man, thoroughly interested in his work, will do more good by far in this office than the worth of any salary he will get. I am sure that if I had, not one-half of this county, but eight or ten towns to superintend, I could do the work so well that the people of the eight or ten towns would be very willing to pay me as much or even more than I now receive. I have been sick two weeks this fall, and that in the midst of my examinations and the making out of my report to you; yet I did. not let the work stop, but hired one man to conduct the examinations, and another to attend to the office work and make out the report.

SCHOOL HOUSES.

A great many school houses are rendered very uncomfortable and inconvenient, and in many cases, comparatively useless, yet with the same outlay of money, they could have been rendered comfortable and convenient, and every part of the building within, and every portion of the space, could have been made very serviceable; and the rooms could have been so constructed and arranged as to be healthful places for the pupils and teacher to occupy. But those school-houses have not been thus constructed and arranged. The trouble arises just here: When a school-house is to be built, or when it has been built and it is to be finished and arranged within, the chimney to be located, the opening for ventilation to be made, the stove to be set, the teacher's desk, and platform to be placed, the amount of black-board

to be decided upon, the distance from the 'floor or platform to the bottom of the black-board to be named, the kind of seats and desks to be chosen, the arrangement of them and the way they shall face to be specified, etc. etc.,—the builders consult farmer Thompson, or blacksmith Jones, or merchant Thomas, or lawyer Smith, or saddler Ludwick, or saloon-keeper Hulse, or mason Barns, or -well, really, any person except an experienced school teacher, for his opinion in the matter. And of course, the person whose advice is sought guesses at what would be best, and gives directions according to his ideas concerning the matter. Now, it is a notorious fact that in relation to any matter, it is possible for us guess right just once, but it is very probable that we shall guess wrong many times; hence in the particulars enumerated and in many others, we very frequently find that great mistakes have been made; and the consequence is that pupils and teachers suffer, and the school cannot be what it should be. Now, so long as I may be county superintendent, I shall feel very gratful to school officers of districts about to build school-houses, if if they will let me know the time and place of meeting at which they are to determine the location, position on the plat of ground, size, shape, and internal arrangment of the school-house to be built. If they will do this I shall meet them even though I have to ride nights and Sundays to do so; (and this I can do feeling that I am not breaking the Sabbath, yet knowing that I am injuring my health), and I promise them that my coming shall pay them for their trouble of notifying me of the time and place of meeting; not because my judgment in general is any better than theirs or even as good, but because this is my business, and if I have not given it sufficient thought to render me better capable of giving advice in relation to school matters than one who sells goods or works in iron or tends the farm or does any other work not pertaining to schools, why, then I am not fit to be county superintendent and some one else who is fit should be chosen, and this work should be given him to do. As it now is in many places, much money is used in this direction and comparatively little benefit is derived from the investment.

GREEN COUNTY.

D. H. MORGAN, SUPERINTENDENT.

I herewith transmit to you my annual report for the year 1871. Some delay has been caused by the district clerks being unable (or unwilling) to fill all the blanks. One town clerk sent a district report back three times for correction, and two of the town clerks made no returns for columns 5, 6, 7, 8, 9 and 10, and they came to late for correction.

I am thoroughly convinced that some other method, than the present, should be adopted for getting true and and reliable reports. One town clerk said that his report came nearest to making something out of nothing, that he ever undertook.

Taking our schools as a whole, they are improving slowly and surely from year to year. Teachers are manifesting a growing interest in their work, and begin to see that, if they wish to continue in the business they must keep pace with the times. They also understand that teachers' meetings and teachers' institutes are of consequence, and to be absent, when they are held, is a real loss to themselves.

COMPULSORY EDUCATION.

I hope the time will come when our legislators will see fit to enact some judicious law for the compulsory attendance of pupils between the ages of seven and fifteen. I report three less school-houses this year than last, and all owing to the indifference and stupidity of the school patrons in certain localities. These three houses have been unfit for school purposes for several years, but the county superintendent has been hoping that the members of those districts would see that the old log shanty must give way to better buildings; but such is not the case. The buildings are entirely unfit for use, and they care too little for the education of their children to make any effort to erect new ones.

I am credibly informed that many of the children of these communities are growing up as ignorant as the native Indian. Now, it does seem to me that therre should be some way of

compelling these people to educate their children. They may have to build school-houses, but they will do as they please about sending their children to the schools afterward. I frequently hear men complain of being taxed to educate the children of their neighborhood, but the children may or may not receive this education, according to the whim of the parents. It appears to me that the natural sequence of compulsory taxation for the education of the masses, is compulsory education.

IOWA COUNTY.

SAMUEL PARKS, SUPERINTENDENT.

In my report already forwarded to you, are needed some explanations to render it intelligible. It will be seen that while the number of days school has been taught, is not less, but a trifle larger than last year, and the average wages of teachers about the same, the receipts and expenditures are each less than one half, or over \$20,000 less than last year. This is owing to the fact that no taxes of any kind were collected in this county last year, and many of our teachers are still unpaid for their last winter's services.

It is unnecessary here to give a history of the causes which have led to such an unfortunate condition of affairs, except so far as is necessary to explain the financial deficiency in my statistical report.

A judgment of a large amount was rendered in the Supreme Court last year against the county, on account of an old railroad bond debt. A writ of mandamus was served upon the county board and town officers, compelling them to levy and collect the amount; and also requiring the law to be placed in the same column with the state and local taxes so that no other tax could be collected without collecting the bond tax.

The town treasurers all failed to procure the large amount of security required before receiving the tax roll; and the consequence was that no taxes of any kind were collected in any town

in the county: and the school districts were left without the means to pay their indebtedness for the winter schools.

In the spring, in a communication through the county paper, I recommended the districte to call a special meeting, vote, and collect, themselves, taxes sufficient to pay their indebtedness, and provide for the summer schools. Most of them neglected to do this, beliving that some arrangement would soon be made, or some plan devised by which the district taxes already voted could be collected. Some districts borrowed money and paid their teachers; others gave orders bearing ten per cent. interest; and others did nothing; and all are more or less in debt for both the winter and summer schools.

This accounts for the small amount of money received and paid out, in my financial report, and also accounts for the fact that many districts have reported paid out more than they have received; as in many instances where money was borrowed, or order given, the district clerk reported it as paid out, but not received.

As may be supposed, this peculiar unfortunate financial condition very materially affects the business and prosperity of our county. And it especially bears harder upon the school and educational interests than any other. The schools were taught an average of seven months, the past year. The present year, the average will be much less, many districts, at their annual meeting, having made provisions for five months only.

But amidst the difficulties with which we are surrounded, it affords me much pleasure to be able to testify to the faithfulness and efficiency of our teachers. Although embarrassed in many instances for want of their pay for services rendered, they have never done a more thorough work than has been done, the past year, in our schools."

JACKSON COUNTY.

J. K. HOFFMAN, SUPERINTENDENT.

It is very gratifying to see the changes that have been made in the last few years, for the better in regard to the common schools in this county. Improvement has followed improvement, shanties and log houses have been supplanted by good and convenient houses, and among a large portion of the teachers there has been a commendable ambition for a better standing and a higher grade of certificate. Good teachers are in good demand, and fair wages are being paid. Much of this improvement is due to the improved method of teaching and a general interest taken by a majority of the people. During the past year, the schools have all been visited, and I have endeavored to incite an interest among both teachers and people.

INSTITUTE.

An institute was held in September—attended by sixty-five teachers and many district officers and friends of education—the most pleasant and profitable one ever held in the county; made so particularly by the presence of that genial gentleman and successful instructor, Prof. C. H. Allen. The address of our highly esteemed State Superintendent, Samuel Fallows, and the assistance rendered by Major A. J. Cheney and others also added materially to its success.

BLACK RIVER FALLS.

The union high school edifice mentioned in my last report, is about completed, and it is not merely an ornament to the village of Black River Falls, but to the county and state. Much credit is due to the school board, consisting of E. D. Cheney, H. B. Cole and J. V. Wells, for the effort they have made to secure a corps of efficient teachers, with Professor W. W. Freeman, a gentleman who comes highly recommended, as principal.

The following are the various departments, with their heads:

High school—Prof. W. W. Freeman.

First and second grammar—S. P. Wilder.

First intermediate—J. M. Burk.

Second intermediate—Mrs. J. M. Millikin.

First primary—Miss M. E. Robinson.

Second p.imary—C. M. Tyler.

As the people of this county has placed me at the head of their

educational interests for the third term-although bitterly opposed by aspirants, and by persons upon whom I would not and could not honorably bestow personal favors, and by political opponents, who, rather than not have a man of their choice, would have placed over our schools a man who has not the moral stamina to control his appetite, yet whose talents and education, when sober, would qualify him for almost any useful position, I enter upon the duties of another year sensibly feeling the responsibility of the position, yet, with renewed energy and a determination to labor for the advancement of the schools, to secure for the county a corps of efficient teachers; to raise the school from mere shams to realities and making all my acts and labors subservient to the common good. During the present winter—as an experiment— I propose to hold in each town a short institute, thereby bringing together all that are interested in the progress of the schools, and discuss the best means for their improvement.

KENOSHA COUNTY.

T. V. MAGUIRE, SUPERINTENDENT.

The schools have been in successful operation during the past year. Great interest has been manifested by teachers, school officers and patrons. This is evidenced by the symmetrical development which marks the growth of the "Public School" everywhere throughout the county.

Several new school-houses have been built during the last two years, on the most modern plan; and many of the old ones are being repaired and furnished with outline maps and such other necessaries as subserve the requirements of a well-regulated school-room.

At the annual Institute of 1870, a County Teachers' Association was organized, having jurisdiction throughout the county, and officered as follows: President, two vice-presidents, a secretary and treasurer. This association holds semi-annual meetings of three days each.

The county is divided into two districts, the eastern and west-6—Sur. Pub. Ins. (Doc. 12.)

ern. The Vice-Presidents of the County Teachers' Association are-residents, one of the eastern and one of the western division; and each acts as president of his district. These sub-districts each, have a secretary and treasurer. Meetings are held semi-monthly during the school year. Reports are required of the subdivisions, at the meetings of the County Teachers' Association, thus producing unity of thought and action, while it also animates a pleasant and profitable emulation. From this arrangement, the cause has received a stimulus, which has more than met the expectations of its most sanguine friends.

The County Superintendent made ninety-one visits to schools last winter, and seventy last summer, making a total of one hundred and sixty-nine. Delivered four lectures, one each in Salem, Brighton, Paris and Pleasant Prairie. Was able to detect but twelve communications in schools visited during the summer.

About four-fifths of the applicants for certificates were successful at the fall examinations, and three-fifths at the spring examinations.

LA CROSSE COUNTY.

GEO. PATON, SUPERINTENDENT.

STATISTICS.

There are sixty-eight schools in the county;

2	of	these	were	maint	ained		• • • • • •		. for 9	months;
7	•••	• • • • •	• • • • •		• • • • • • •			• • • • • • • • • • •	. for 8	months;
20						• • • • •	• • • • • •		for 7	months;
22		••••	• • • • •		• • • • • • •		• • • • • •	• • • • • • • • • • • •	for 6	months;
10		• • • • •	• • • •	,	• • • • • • •			• • • • • • • • • • •	. for 5	months;
1			• • • • •	• • • • •		• • • • • •			for 8	months:

Which gives an average of nearly 6½ months school during the year, in each district. This is far below what it should be, and I hope less than it will be next year.

There are 4,583 youths between the ages of 4 and 20 years, in the county, not including those in the city of La Crosse. Of this number, 1,149 are between the ages 4 and 7; 2,240 between 7

and 15, and 994 between 15 and 20. Of the whole number, 2,912 are reported as attending school, at least a part of the year. This number you will observe, is only 472 more than the number of children between 7 and 15 years of age in the county, and but 63 per cent. of the youths between 4 and 20. By a careful inspection of teacher's records, I am satisfied that not more than 52 per cent. of the children (so called) of the county attend school regularly, for the average time of 64 months during the year. Of course, this estimate is not absolutely correct, yet I believe it is nearly so---so near, that it should awaken us to greater activity in developing and utilizing educational interests and advantages.

IMPROVEMENTS.

Since I reported to you before, district number six (in village of West Salem) has made rapid progress in school matters, having purchased the building formerly used for an academy, and converted it into a public school building. It has been well seated, provided with good black-boards, and furnished with an excellent globe, tellurium, and a complete set of outline maps. As an indication of the interest manifested in starting and maintaining a good public school here, let me say that many if not all, the citizens of the town, who held stock in the academy, and furnished means to erect the building, donated their stock, requiring the district to pay only the mortgage upon the building, which was but little more than one-third the real value, while one citizen expended about \$40 in setting out shade trees on the grounds. This district now employs three teachers—Mr. Leete, Miss Leonard and Miss Marshall, under whose instruction the school improves rapidly, meeting, I believe, the most sanguine expectations of our citizens.

District No. 6, Shelby, has built a fine school-house of stone, furnishing it with the very best furniture; they are now waiting to have a thorough, competent teacher sent them, and I will use every endeavor to find them such a one. District No. 1, Onalaska, is coming rapidly to the front rank. Since my last report, the old school building has disappeared, and a fine new building

has been constructed, furnished with single desks in the grammar department and in the others with the double desk. The building, furniture and site cost about \$4,000. The tax is quite heavy upon the inhabitants of this district, yet at my next visit, I hope to find the people willing to furnish a globe and a set of maps and charts.

District No. 4, Bangor, has repaired and added to the old school building, so as to make it very comfortable; reseating it throughout with the new patent desk. Two teachers are employed here, the principal, Miss Watson, at a salary of \$500 for ten months. No. 3, Bangor, has built a commodious new frame school-house, and is very anxious to start fair with a competent teacher. And here let me remark, that teachers holding limited certificates are becoming a relic of the past; in fact all our young teachers, at examinations are candidates for competent certificates or none, choosing to wait until entitled to a complete certificate before assuming the responsibilities of a teacher.

TEACHERS.

We have seventy-four teachers in the county actually employed in the public schools, at an average range for male teachers of \$40.38 per month; for females, \$29.82 per month. The total amount expended for wages during the year is \$15,410.71, and it may be truly said that an equal amount of money is expended upon no other public servants in the county who render more faithful, efficient or enduring services than these. Indeed, much of the public intelligence, refinement and virtue it is theirs to create and stimulate, and these responsibilities are usually accepted, I believe, with an honest purpose to meet them faithfully and with an intelligent service that will cause the enconium, "Well done good and faithful servant." Let the teacher magnify his profession, for when works of stone and brass and iron shall have crumbled again to dust, his workmanship will endure.

SCHOOL LAW.

Has the time not come when it may be safely enacted that districts, in order to be entitled to a share of the public fund, shall maintain schools for seven months during the year?

Let it be enacted by our next legislature that district clerks be paid a specified sum for their yearly services, and let that sum be proportioned, say to the number of teachers required to teach the schools in their respective districts.

Our most conscientious and efficient clerks sometimes have to spend two or three days in finding teachers suitable for their schools. At least one day in the year must be employed in making the annual returns; it is but just that these and kindred public services, rendered by them as district clerks, be paid for from the state, or raised by the district. Were these officers paid a reasonable remuneration for their services, returns from them would be more complete and their schools more effective.

CONSTITUTION.

We feel much pleased with the enactment requiring that the constitution of the United States and State of Wisconsin, be taught in our public schools. We will begin in this county with the constitution of the United States, as it is. The fundamental law, the state conctitution springing from it. Our teachers are studying Story's or Kent's commentaries, or both, carefully before attempting to hear their classes; and indeed, only that teacher who has a clear analysis of the constitution in his own mind can hope to instruct others in it.

If there are any other works published giving a clearer analysis of the constitution than those I have mentioned, we would like to learn their title, and where they may be purchased. I think a circular from the State Superintendent touching these points would be of use to our teachers.

EXAMINATIONS.

There were ninety applicants, this fall, for certificates, forty-five of whom succeeded in passing. I do not attempt to make the examinations difficult; my aim is simply to learn whether the applicant understands the branches to be taught in our schools well enough to teach them; whether he is of good moral character, and if he can govern well. I rely more upon the oral than upon the written method, assigning at least two days for the exam-

ination of each class; sometimes, when the class is very small, finishing in one, and again using three days.

The superintendent can accomplish much for his schools, by doing this part of his work well; and it is a source of great pleasure to me that parents generally appreciate my labors, and make me welcome as a friend and warm advocate of common school interests, as I go back and forth among them. Any hints, suggestions or papers from the State Superintendent's office, tending to the increased prosperity of of our schools, will be thankfully received.

MANITOWOC COUNTY.

MICHAEL KIRWAN, SUPERINTENDENT.

The past year has been one of considerable progress of matters pertaining to the common schools of this county. Many districts had terms of more than the usual length, and in a majority of instances, school was maintained during a portion of the summer, in addition to the regular winter sessions. Several new school buildings were erected in the country districts, and a few of the old schools supplied with globes, charts, and outline maps. In the city of Manitowoo the inhabitants voted to build two new school-houses—one to cost \$12,000; the other \$20,000. The former building is now nearly completed, and will soon be occupied; the latter will be built next summer.

INSTITUTE.

An Institute was held here in October of the present year, with Professor Graham in charge. Nearly one hundred teachers were in attendance throughout the session, which lasted five days, and all expressed themselves highly pleased with the results. These Institutes have done more than any other educational agency to improve our teachers, to impress them with a sense of the responsibility and importance of their work, and to inspire a love for their profession.

EXAMINATIONS.

The public examinations have been well attended. Few private examinations have been sought, and still fewer granted. Since last April only one applicant has been thus examined. A large proportion of our teachers obtain only limited licenses, and when thus armed they appear happy and contented with their lot. Persons of this class often have very urgent business that can not be neglected, about the time Institutes are in session. They do not always attend the examinations, but will call on you, in a day or two afterward, and explain that they "didn't expect to teach," or that their absence was unavoidable; but hav-having engaged schools, and the people being so desirous to secure their distinguished services, you are assured that it is all right, and requested to furnish the customary evidence of incompetency, in the form of a limited license.

ABSENTEEISM.

Absenteeism is an evil of as great magnitude in this county as elsewhere. Impassable roads in winter, the long distance to be traveled, the poor eccommodarions of the school-room, the indifference of parents, and the inefficiency of the teacher tend to enlarge this difficulty. These conditions will change as the country becomes older and more populous, and each improvement in our common school system will be conducive to better attendance.

MARATHON COUNTY.

THOMAS GREENE, SUPERINTENDENT.

Since my last report, Marathon county has, in many respects made a decided improvement in educational matters. The interest of parents and friends of education, also of the teachers, seems to be aroused. Everywhere throughout the county the people are desirous to secure the services of male teachers, capable of doing their work well.

SCHOOL HOUSES, ETC.

There are now fifty-two districts in the county, and fifty school-houses. Eleven are good, handsome frame houses, and two are elegant buildings, which would do credit to any village or town. One is in the thriving village of Knowlton; the other is in district number two, Marathon city. A large, handsome school-house is being built in the flourishing village of Jenny. The population is so greatly increasing as to require a graded school. A large and elegant brick school-house is to be built in the village of Wausau early in the next year. A large, commodious school-house is greatly needed, as the old one is fast wearing out, and is far too small to accommodate the greatly increased number of pupils.

District No. 9, in the town of Berlin, has been reorganized and has a new school-house of brick, and is ready for occupation.

"Onward the tide of emmigration forces its say." A new district has been organized in the town of Texas, four miles above the Pine River Mills. A school-house is to be built soon.

Ten schools are supplied with globes, and 27 with good outline maps of the United States.

WORK.

Forty-seven schools have been visited, some twice, others three times. In all I have made 62 visits.

The Marathon county teachers' institute was held in Wausau, on the 26th of September, continuing five and a half days. The meeting was pleasant and profitable. Fifty-one teachers were present.

MILWAUKEE COUNTY—Second District.

JAS. L. FOLEY, SUPERINTENDENT.

The three towns which compose this district, have 3,533 persons of school age. Of this number, 1,733 have attended the public schools a part of the time, and at least 500 more have at-

ended the private schools here, or some of the schools in the city of Milwaukee.

SCHOOL-HOUSES.

I am happy to be able to say that the old dilapidated buildngs which have stood the storms of more than thirty winters,
have well-nigh all disappeared and given place to other structures more in keeping with the times. A new school-house has
been erected in the village of Wauwatosa, which, with its site, is
worth about \$8,000. It is built of brick; is neat, commodious,
attractive, well ventilated, will seat about 200 pupils, and is without doubt the most comfortable house of its kind in the state.
District No. 8 of the town of Milwaukee, at a cost of \$900, has
put up a new house which will accommodate seventy pupils.
Provision has been made in another district to commence work in
the spring. There will still be three log houses left, which are
worthy of condemnation, and would be condemned, did I think
that the cause of education would be assisted thereby.

TEACHERS' EXAMINATIONS.

At the five which were held during the year, 75 applicants were present. Of this number, 2 received first grade, 3 second grade, and 43 third grade certificates. Considerable difficulty is found to secure suitable teachers.

TEACHERS' INSTITUTE,

At the one held in the village of Wauwatosa during the last week of October, all the teachers living in the district except three, were present, and manifested a lively interest throughout. The exercises were ably and most successfully conducted by Prof. J. C. Pickard, and I. H. Stewart, Esq. The State Superintendent, in his pleasant forceaile manner, delivered a lecture on "Our Educational System."

VISITING SCHOOLS.

As the district is small it is a decidedly pleasant task to supervise the schools. Hence I have visited them on the average

there times. This is regarded as the most important work of the superintendent, and I think that more good results from the faithful performance of this duty than from all others combined. I regret that my visits were the only official ones paid to many of the schools during the year.

QUALITY OF TEACHERS.

Until last year we had but one second grade teacher. Now we employ the holder of a state certificate, a graduate of the Whitewater Normal School, two of the first grade, three of the second, and twenty-eight of the third grade.

TOWNSHIP SYSTEM OF SCHOOL GOVERNMENT.

A meeting, attended by the school officers and teachers of the town of Granville, was held last March. Having fully considered the "township system," a vote was taken, which resulted in its favor. A similar meeting in Wauwatosa, during the same month, discussed the subject, and it was found that the opponents of the system were stronger, in numbers at least, than its friends. Owing to its certain defeat at the polls it was not placed before the people at the spring election. The measure finds many enemies. Some fear to delegate so much power as would fall into the hands of the executive committee. Others think that partiality would be shown to particular localities. A still larger class, because taxation would not be lessened by its adoption. These, with many others, make it certain that, in its present form, it will not be favorably received in this quarter.

OCONTO COUNTY.

H. W. GILKEY, SUPERINTENDENT.

A review of the educational work accomplished by the public schools of this county during the past year, shows results exceedingly gratifying. The many obstacles that obstructed the work two years ago, such as poor inexperienced teachers, irregularity of attendance, apathy among district officers and dissatisfaction among parents, have gradually disappeared, and the machinery of education can be said, now, to be in successful operation.

MEANS OF IMPROVEMENT.

Among the instrumentalities employed to accomplish this much desired result, may be mentioned, earnest, experienced and qualified teachers, frequent visitation and thorough examinations. An elevation of the standard of qualification of teachers, together with an advance in wages, has placed the majority of our schools in charge of first class teachers. I find good teachers to be the real lever by which our schools are to be elevated; and it is truly gratifying to me to know the popular sentiment among the people is: we want good teachers and we are willing to pay for them.

By frequent visitation, I have been enabled to become acquainted with the practical workings of each school, and to understand its condition and wants, and where improvements were needed in school government, classification, or in the teacher's method of conducting recitations or imparting instruction, they were freely suggested and practically illustrated, when necessary, and, as a general thing, cheerfully acted upon by the teacher; thus securing, in a measure, a uniformity of instruction throughout the county. This I find very advantageous here, owing to the fact of such frequent changes of teachers as this county has been subject to. There has been a decided change for the better in this respect, however, and during the past year most of the teachers have been engaged for the school year. The responsibility of recommending or engaging our teachers has, by mutual consent, devolved almost wholly upon the superintendent. This task, although an arduous and responsible one, is attended with beneficial results to 'the schools; for by frequent visitation and personal intercourse with parents and school boards, I am enabled to learn the peculiarities of each district, the requirements of each school, and hence am better prepared to know as to the kind of teacher that is best adapted to each locality, thus generally securing the right teacher for the right place, and at the right time to have the term begin. This duty, if left to dilatory and inexperienced clerks, often results injuriously to the interests of the schools and the cause of education. I think a modification of our school law, in this particular, would be attended with beneficial results—so that the teacher should be employed only upon the recommendation or nomination of the county superintendent.

MONTHLY REPORTS.

Monthly reports, which the teachers are required to fill out and transmit at the close of each school month, and from which an abstract is made and published in our county paper, have contributed largely in securing punctuality and regularity of attendance among pupils, and in awakening an interest among patrons, by getting them out to visit the schools. Teachers also are stimulated to action thereby; since these reports are taken as a sort of criterion of their success.

THE FIRE.

Our per cent. of attendance, although much greater than last year or at any previous time, would have been larger still if it had not been for local hindrances, in the shape of smoke and fire, that prevailed to such a fearful extent throughout the entire county, that, oftentimes it became necessary for the children to remain at home to "fight" it; while on several occasions teachers were compelled to close their schools and seek places of safety and comfort. This state of things continued for weeks, until the mighty fire tornado came, devouring in its fury, homes, parents, school-houses and pupils, causing the temporary suspension of the majority of the schools, and destroying nine school buildings. One of our teachers was burned to death, and another made a cripple for life, if, indeed, she recovers from the terrible wounds received in her efforts to escape; while not less than one hundred and fifty school children perished in the flames, and have gone, we trust, to attend schools in the better land. Between three and four hundred are deprived of school privileges, for three or four years, at the least, unless the state should come to our relief and re-build the school-houses; for the settlers have been stripped of all their earthly possessions; and, although the

state and people have contributed nobly to the relief of their present necessities and sufferings, yet it will require years of industry and perseverance on their part, before they will be wile to do much beyond their present necessities. Yet, I think, if they had school-houses, with what public money they will receive, they would be able to maintain school five or six months during the year.

CONCLUSION.

In conclusion I would say, that with the exception of the burnt district, educational matters look truly encouraging. The interest of the people has been awakened to the importance of the work, and their co-operation secured. Teachers are laboring, with commendable zeal, to rise in their profession, while district officers are more attentive to their duties; and with the experience and observation of the past two years, I enter with renewed courage upon the responsibilities of another term, resolved to employ every legitimate agency in my power to promote the interests of the schools, for in them rests our future hopes of success and prosperity.

PEPIN COUNTY.

D. F. REID, SUPERINTENDENT.

The condition of the schools in our county is, on the whole, encouraging. We have, however, some difficulties to contend with. Some of the employers have had but little schooling, and that little was under the old constitution; and these are the ones who know exactly how schools should be managed, and how every branch should be taught. Our district boards, generally, perform their duties very well, and so, with some interruptions, all are moving along with as much peace and progress as could be expected.

THE FOREIGN ELEMENT.

We have a large and interesting proportion of adopted citizens in our newly settled county. One whole town is almost ex-

clusively inhabited by Swedes. They are a peace-loving and orderly people, and very desirous of having their children enjoy the benefits of a good English education, though many of the parents can hardly speak, or understand, our language. It requires a great amount of patient perseverence in our teachers, to have the children pronounce our words correctly. In these schools the first thing to be done is to teach the English language, and I insist on my teachers being very diligent in training them in the elementary sounds which belong to our language, and not to To this intent, I have succeeded in having every school theirs. in the county supplied with a dictionary. I believe that in all cases the right pronunciation may be obtained. We have also one whole district in another town composed almost entirely of Germans, and what I have said of our Swedes in Stockholm, may be said of our Germans in Albany.

EXAMINATIONS.

I have held four public examinations since my last report, and have licensed forty-eight teachers—forty-seven third grade, and one first grade.

VISITATIONS.

With two exceptions, I have visited all the schools in the county twice during the school year, and those two I visited each once. I have conducted the exercises of classes, have had the teachers conduct the exercises, and have recommended such exercises as I thought would be beneficial; and, as talking is a good part of my life-business, I scarce ever fail to do what I can to encourage both teachers and pupils to be diligent in their school hours, assuring them that the great reward will be theirs. I am glad to see that, in many of our schools, religious training is neither neglected nor treated with indifference.

TEXT BOOKS.

None of our towns have adopted a set of text books, but I do think that if a selection were made in your office, our towns would all secure the books selected, at their earliest convenience. I would not prescribe, but am well pleased with the Analytical

series, especially the Fifth. I would be glad if our state could make a selection, and I think it has the authority to do that, as well as other things it has done and is still doing.

INSTITUTE.

We had a very pleasant and profitable Teachers' Institute, held in the village of Pepin, September 18—22, conducted by Professor C. H. Allen. By mistake, or otherwise, the time of meeting was changed from 19th to 18th, so the beginning of our exercise was on Monday. As few arrived on Monday, the exercises appeared dull, and we were discouraged; but each day brought new members, and the interest increased from day to day, and I do think much good was done; and a unanimous vote of thanks was given to our worthy conductor, at the last session.

MUSIC.

In some of our schools, some attention is given to vocal music, and I hope the time is not far distant, when the science and the art of music will be a regular branch of our common school education. If our Creator had not intended music for the benefit of the human race, why did he give man a constitution that finds so much enjoyment in the art? And why does He hold out the perfection of music as one of the chief enjoyments of the redeemed in heaven?

BLANKS.

Would it not be an improvement to have the headings in the blanks for town clerks, and those for county superintendents, to correspond with each other in place and number?

POLK COUNTY.

CHARLES E. MEARS, SUPERINTENDENT.

The experience of another year in the school-work of our county, more fully convinces me that we are going ahead. While to one who feels anxious for improvement, the progress seems

slow, yet, I think our schools are in a better condition than they were one year ago.

TEACHERS AND WAGES.

There is a growing demand in our county for better teachers, and more of them. While some of our districts wish for better work at low wages, many of them are offering higher wages than ever before, and very few desire to employ cheaper teachers. Live, active teachers are the kind we need in our schools, and I notice district officers soon learn that the other kind are not profitable, either for our pupils, or to them, in the sometimes more important matters of dollars and cents. A cheap school is generally a poor school. A cheap teacher is generally a poor teacher, who is always willing to work very little and draw his salary regularly. I do not wish to be understood as saying that a poor teacher will not take high wages if he can get them; or, that a good teacher does not sometimes work for small pay. But, if he is alive to the importance of his work, and feels a vital and thorough interest therein, even though he may know and feel that he is not paid what is justly his due, his work will be the same, and his interest and desire for success just as great as thoug hhe were receiving all he might ask.

SCHOOL CHILDREN.

The number of school children in the county, over four years and under twenty, as taken from the town clerk's reports, is 1,385, a slight increase over the number reported last year. The number of different children who have attended school during the year, is 974, which leaves the very large number of 411 who have not attended school. I know that a portion of this difference is due to the fact that many of our people live in the more newly settled portion of our country, and away from schools. But, I also know that much of the responsibility of this delinquency reses with parents who live almost in sight of a school house. Do we not need a law, in a measure compulsory, to reach evil? It seems necessary.

SCHOOLS AND VISITS.

Our schools have been generally successful as an average, although we have had some total failures. Experience is a good teacher; if her teaching be heeded, good results may follow. I shall guard against the same trouble in the future; at least so far as the same persons and schools are concerned.

I have visited all the schools once each term, and some of them twice during the year, also the officers of the districts maintaining no school. I generally devote an entire day to each visit to a school, and am as thorough in the examination of the classes as the time will permit me to be. In many schools I notice a decided improvement, and can speak in praise of the work of a number of my teachers.

SCHOOL-HOUSES.

But two new school-houses have been built during the year. Many old houses have been repaired and rendered more comfortable. District number one, Farmington, purchased new furniture for its house in the spring. They have the finest lot of desks in the county. The house is also supplied with good, new blackboards.

REPORTS OF TEACHERS AND DISTRICT OFFICERS.

My teachers, with few exceptions, have reported promptly at the end of each school month. Their reports contain a statement of the number of pupils enrolled; number of days' absence; average attendance; number of cases of tardiness; exercises in declamation and composition; monthly wages of the teacher; visits of the teacher to the patrons, and of the patrons to the school; and many other items of information. I should not feel satisfied without these reports.

In connection with my visits to the summer schools I called upon nearly every district clerk and treasurer in the county, and conversed with them in regard to the proper manner of keeping their books and making their reports. I found many districts in a very bad condition. Some without any books or accounts.

The result of the visits is that our district reports are in a better condition than ever before.

Our school children are truly the wards of our districts. For this reason the theory that the men who perform our school business should perform it for nothing, is, perhaps, good to talk about, but it is certainly in practice miserably poor. We have no right to ask men to work for nothing. But, it matters not how much we may ask them, the result shows that they will not do it. I respectfully suggest that the school law be amended so that district officers may be entitled to receive pay for their services, and then elect the best, most prompt business men in the district to such offices.

TEACHERS' CERTIFICATES.

A total of seventy applicants have been examined during the year. I report no first grade certificates; but one second grade, and twenty-one full third grade certificates. Of the balance, thirty-five were limited third grade, and thirteen applicants were refused certificates. For a full third grade certificate we require an average marking of eight; for a limited third grade an average marking of seven and six; no certificates are issued on an average marking of below six. I think it would be well to make our first grade certificate a state certificate, limited to a term of years.

Many of our leading educators think that as a general rule persons under the age of sixteen ought not to be allowed to teach. As the law now is, a superintendent can license a person of twelve or fifteen years of age as a teacher. Would it not be well to take this authority from the superintendents, and amend the law so that none under the age of sixteen can be licensed? We certainly need men and women, either self trained or otherwise, in our schools, as teachers—not boys and girls, as persons under the age of sixteen can only be classed.

INSTITUTE AND ASSOCIATION.

As an evidence of the increased interest on the part of our teachers in their work, I refer to our institute and association. A very successful and profitable institute was held at Osceola Mills,

in September, 1870, continuing in session three days. Also a meeting of our association at St. Croix Falls, in March, 1871, continuing in session three days. The people at each of these places were very kind, and gave us all the assistance we asked for.

Charles W. Fenlason, is President of the Teachers' Association, and Willis Scott is Secretary. The Association has made arrangements to publish and Educational Record of Polk county. It will probably be issued in January, 1872.

IN CONCLUSION,

I can say that our educational prospects, on the whole, look brighter. Many of our teachers are taking a deeper interest in their work. I have sufficient confidence in them to think that they will continue to improve. During the past two years nearly all of them have responded cheerfully to my calls for work, and I believe they are ready and willing to continue to do so. We try to work together for the common good of our schools.

In entering upon my second term, with more experience, and a more extended knowledge of the wants and needs of our school, I hope to perform better work, and, at least, as much of it as I have in the past.

RACINE COUNTY.

LYMAN EARLE, SUPERINTENDENT.

It is with some degree of satisfaction that I can report to you that the school interest in our county was never better than it is to-day.

Our people are becoming awakened to the great fact that our schools should be made better, hence there is a greater demand for better qualified teachers than ever before; and in order to meet this demand and create among us more interest in the work, we have held two institutes since October 20, 1871, and teachers'

associations once in three weeks in each of the association districts.

That these meetings are productive of much good, no candid person can for a moment doubt. No more efficient aid can be found for the earnest and wide awake teacher than these periodical meetings. Similar gatherings are recommending for the future.

INSTITUTES.

An institute of one week was held at Burlington in the month of October, 1860. Eighty-four teachers were present. The institute was conducted by the superintendent, assisted by the teachers. Professor Arey, of Whitewater, and Professor Albee, of Racine, were each present one day, and rendered valuable aid.

LECTURES.

School Government, by Professor Woodworth; Common Schools, by Superintendent Fallows; Needs of Our System, by Professor Albee; Schools, by Rev. Mr. Odiorne, of Rochester; Digestion, by Dr. Newell, of Waterford; Education, by Rev. Mr. Howard, of Mt. Pleasant; Circulation, by Dr. Newell, of Waterford; Philosophy of Thinking, by Rev. S. M. Merrill, of Lyons; Connecting Links, by Rev. Dr. Barry, of Fond du Lac; Duties of Parents to, Children, by Rev. Dr. Barry, of Fond du Lac; Nervous System, by Dr. Newell, of Waterford.

EXAMINATIONS.

During the past year we have held nine public examinations; examined 275 applicants; granted 175 certificates and permits; of these three received first grade and twenty received second grade. Here allow me to say that it has been my practice to confine all my certificates granted in the spring to six months' time, thus bringing all to my fall examination.

SCHOOL-HOUSES.

A very large per cent. of the school-houses in this county are in good condition, but still we have too many poor ones. Two

school-houses have been built, costing from \$1,000 to 1,500 each. In several districts steps are being taken to build the coming year.

EDUCATIONAL JOURNAL.

About fifty of our teachers are subscribers for our excellent Journal of Education. I wish they all were.

TEACHERS' REQUIRED.

It takes 84 teachers to fill our schools. We have had 130 different teachers during the last year. It is a fact worthy of note, that the best schools are to be found in those districts which engage the same teachers term after term.

TEACHERS WAGES:

The average per month for male, is \$42.84; the average per month for female, is \$27.66; for the year previous it was for male teachers, \$44.28; for female teachers, \$27.32.

GRADE OF CERTIFICATES.

We divide our teachers in respect to "Theory and Art" of teaching into three grades, styled respectively, 1st, 2d and 3d. Those teachers having a mark from 60 to 70 degrees, the third grade; from 70 to 80 degrees are the second grade; from 80 to 90 degrees are the first grade. Here let me say that as a rule, 80 degrees is all we give a person who has never taught, but when we visit his school and find him alive and doing well we mark him accordingly.

TEACHERS.

A good per cent. of our teachers will come under the first grade, but the majority belong to the second class, while a few, I am sorry to say, belong to the third class.

Our teachers, as a rule, are exerting an influence in this county that is most potent for good. They marshal a host of girls and boys every day, through which they can, if they will, exert a mightier influence for good than all other persons beside. We may, however, except the parents.

SCHOOL TERMS.

By the advice of the Superintentent many of our districts have decided to have the school year divided into three terms instead of two as formerly, commencing the first of September, and closing by the 4th of July.

SCHOOL SUPERVISION.

In supervising the work of the schools, a constant effort has been made to promote our educational interests by advising with district boards in matters relating to them, and with teachers relative to school government and by exemplifying class drill upon the various subjects taught.

Each school has been visited at least five times during the two years.

RICHLAND COUNTY.

GEO. W. PUTNAM, SUPERINTENDENT.

As my term of office is soon to expire, you will allow me to extend my report beyond the close of the fiscal school year.

You are well aware that the county school superintendent system has been quite unpopular in this county. The impression very generally prevails that school visitation is entirely useless; and I am of the opinion that it is only of secondary importance, as it is usually conducted. During my connection with our schools as superintendent, I have labored to counteract this opposition to the system, by endeavoring to awaken a spirit of enterprise and emulation among the teachers, and thus incite them to strive for a higher grade of qualifications and greater zeal in their work, and thus, through the teacher, elevate our schools and awaken an interest in education among the people. In this I think I have partially succeeded. To accomplish this work in this location, I have considered that the main instrument to be employed in this work was

TEACHERS' INSTITUTES.

They have continually grown in favor with the people and are now considered of prime importance. An institute of one week's duration, was held at Richland Center, in November, 1870, conducted by Professor Robert Graham. About sixty teachers were in attendance, who manifested a willingness to work and the teachers were quickened for the labors of the coming winter. The lectures and discussions awakened a lively interest in the community, and I deemed it a fit time to make an effort to secure more institute work in the county. Up to this time only short institutes of four or five days had been held in the county.

At the convention of county superintendents at Madison an arrangement was partly made for holding longer institutes, which has been quite successfully carried in this county.

In the spring of 1871, I held two institutes. The first of three weeks, was at Marshall, in March. The weather was unfavorable. but the attendance was fair, about twenty seven enrolled; interest in schools increased, and some good was accomplished. The other, of four weeks duration, was held in April, at Sextonville. We had the assistance of Professor H. Barns in that work, and he succeeded in creating a greater interest in institutes, than had ever existed here. Eighty names were enrolled and much real good was done for the cause of education. A joint institute of four weeks, with Superintendent W. H. Holford of Grant county, was held in August, at Muscoda. This was also conducted by Professor H. Barns. The circumstances were not as auspicious as at Sextonville, yet I believe that considerable good was accomplished. About fifty teachers were enrolled.

Our annual institute was held at Richland Center this fall, conducted by Prof. C. H. Allen. Fifty-six tames were enrolled, and it was pronounced the most successful short institute ever held in the county, and, by the way, I consider Prof. Allen to be the right man in the right place.

My faith in institutes is not in the least diminished, but I have come to the conclusion that they are the means to be used, in sections of the state away from our Normal Schools, to elevate our common schools. I have also come to the conclusion that in

most localities a two weeks' institute will prove of more real benefit than either a one week or a four weeks' institute. I think a more uniform attendance could be secured for two weeks than for four. I hope that provision may be made this winter by which aid can be furnished by the Board of Normal Regents, for holding two weeks' institutes.

ECHOOL VISITATION.

Enough time has been devoted to the visitation of schools during the year to satisfy me that work done in the institute will pay. I find almost invariably that those teachers who are regular attendants of our institutes are the most successful; the scholars are interested, and the school rapidly improving. I almost as invariably find that those teachers who never attend institutes have dull schools and their pupils are making but little real progress.

TEACHERS' CERTIFICATES.

I have found that some of our most successful teachers were among those who held third grade certificates. Desiring to acknowledge their merit and to stimulate them and others to increased exertion, I resolved to make three classes of third grade certificates, known as classes A, B and C, printed in different colors. Class A includes those who have taught at least one year, and are known to the superintendent to be successful teachers; class B includes those of less experience or partial success as teachers; class C includes those who have never taught. I think the plan works well.

TEACHERS' EXAMINATIONS.

During the year 1871, I have had 360 applicants at the several examinations. Of that number there have received—

First grade certificate	4
Second grade certificate	10
Third grade certificate, class A	76
Third grade certificate, class B	70
Third grade certificate, class C	

Quite a number have also been granted six months' certificates. A portion have taught during the summer term, and there were

others too young to teach, but whose attainments seemed to merit some recognition.

TEACHERS' REPORTS.

During the last term I have required teachers to make monthly reports to me, and I have made up reports from them as received, and published them weekly in the county paper, which I think has had a good influence.

In conclusion, I can truly say that there has been a commendaole improvement manifested in our schools during the time they nave been under my supervision. Teachers are better qualified, and good ones better appreciated; patrons are more interested; old, dilapidated school-houses are gradually disappearing, and better and more commodious ones are taking their places; many districts are being supplied with maps and apparatus, and on the whole the friends of education may take courage, and go on with the work of improvement.

ROCK COUNTY.—FIRST DISTRICT.

I. W. HARRIS, SUPERINTENDENT.

There are errors in the report, which I cannot correct. We never can have accuracy in these matters, until district records are properly kept, and that never will be done, even approximately, until men are fairly paid for their time and labor in doing it. Many of the districts give no report whatever on many of the items called for, while others are very fragmentary and incorrect. As a result, the report from one town gives \$2,314.36 "received;" \$2,704.57 "paid out," and \$73.35 still "on hand!" Another did not give the "No. of children over 4 and under 20 in those school districts which have maintained school five or more months," in a single district in the town! This was returned, rather than to throw the town out of its public money, and in waiting for it, I am considerably behind time.

CERTIFICATES.

Several of those to whom certificates have been given, during the year, have attended examination twice, which makes the number of certificates given, considerably greater than the number of persons licensed.

TEACHERS' ASSOCIATIONS AND INSTITUTES.

Two teachers' asociations were organized during the year, one in the northern part of the district and one in the southern.

Besides the institute of four days, conducted by Prof. Graham, we have had nine one-day institutes, or "teachers' meetings:" four during the winter term, and five during the summer. These meetings have been held in different parts of the district, so that all could attend at least one during each term. A programme of exercises was prepared and distributed, beforehand, and parts assigned to different persons. They have been a great help to us Evening lectures were delivered ir connection with these meetings as follows: By Judge Knapp, on "The Isotherms of North America;" by Prof. S. S. Rockwood, "Culture not in Text books;" By Rev. Edward Morris, on "The Different Branches of Education."

Prof. Graham's stay with us was "as good as a year's schooling." We shall not soon forget the lessons he taught us, or lose the impluse to study, which he gave us. All were grateful for his earnest, faithful drill.

HIGHER QUALIFICATIONS IN TEACHERS NEEDED.

The conviction has grown on me, ever since my connection with the work, that our standard of qualification is not generally high enough. The schools need experience of life, a general knowledge of things, and an understanding of the laws of mind, not found in many who teach. Rightly to educate children, teachers need very much knowledge not found in common text-books. One who is not a thinker, cannot teach others to think. If he does not understand mind, then he is not prepared to control and develop it. Merely to "hear lessons," is a very small part of a teacher's work. Power of mind, to stimulate thought,

and such a knowledge of mind as will enable the teacher to reach it and bring it into healthy action, in the pupil, are essential to anything like success in educating. Very little of this is generally required of the teachers of our common schools. Yet, through them the masses are to be reached, if at all. The work done in them will do more to give character to this nation, and to decide its destinies, than any other one influence of the land. "Common school education" is, therefore, one of the most important causes to which our attention can be directed. It is worthy of our best talent, energies and efforts.

SHEBOYGAN COUNTY.

W. E. CADY, SUPERINTENDENT.

In addition to my annual report, already made out, I will simply state a few facts relative to our county.

COUNTY SUPERINTENDENCY.

From first to last a great number of the thinking voters of our county are opposed to the system. However discouraging it may seem, it is nevertheless true, that the system has been of but little value to our schools. A few of the leading schools have been supplied with better teachers than formerly, while a large majority are supplied with mere children as teachers—children in the eye of the school code and of statute law; and children in ability and maturity. More than two-thirds of those licensed are less than twenty years of age. Almost invariably, where these children are employed as teachers, a general apathy pervades the district, or a general disturbance is bred, and of course, the teacher is not employed in the same school for a second term. Now comes another child as teacher, and a renewal of the old scene.

Now, whether this is chargeable to the system or to the officers, I will not attempt to say. One thing I know, viz: dur-

ing the ten years of county superintendency this has been the rule in our county. Now the question of expense to the county arises. It will cost our county \$1,800 from January 1st, 1870, to January 1st, 1872, to superintend schools. A sum for which no one competent for the position will be willing to give his entire time. If the system is worthless, the tax is heavy. If one accepts this position, he at least tacitly agrees to do the duties thereof.

FIELD OF LABOR.

There are fifteen towns in our county, containing one hundred and fifteen school-houses—two houses with three departments, two with four, two with one department in summer and two in winter. These schools have all been visited during the year, or rather will be before January, 1872; a goodly number of them during each term. How much good has been accomplished by these visits, time alone can tell. It has occupied all of my time, and whatever ability I posssss. A few schools have been benefited by the visits. A large majority were doing as well before the visit as after. A large number of our better teachers advise not much visiting from the county official. Their argument is: suggestions made, modes of teaching presented, etc., will not be carried out. Advice is gratuitous, and "as that which costs nothing is worth nothing," so a great many teachers expect an official speech, and there it ends.

EXAMINATIONS.

I have ever tried to make the examinations searching and suggestive. Some good has been done here, I hope. A great many applicants have been refused certificates, which of course has caused ill-feeling. I place more confidence in examinations and institutes than in all the professional visits which can be given, however good the intention of the visitor. Two examinations have been held each year in each examination district. Twelve hours were required to go through the written examinations, and from one to four hours, according to the circumstances, for the oral examinations. My aim has been to make the examinations thorough. This year there have been very few applicants for

special examinations. Examinations have been so conducted that it was policy for incompetents to attend the public examinations Last year it was quite different.

INSTITUTES.

Last October, we held a two weeks' institute, at Sheboygan Falls, conducted by the county superintendent. But few teachers were present. Those who needed such teaching most, were "unavoidably "?) absent. Prof. R. Graham was with us three days, nearly. He was, through mistake, booked for another institute, at the same time. Superintendent Fallows rendered us very efficient aid, by way of an able lecture; as also did Prof. Alden, from Whitewater, who gave us a public reading, both instructive and laughable. Finding that I failed to draw out the teachers to attend a county gathering, I have tried to call together the teachers of a town for one day, or a part of a day. But here, also, I find it impossible to draw out those who most need to attend such a gathering. To keep up our time-honored (?) custom of changing superintendents each term, the duties of the office will fall on the shoulders of some one else, after January, 1872.

TREMPEALEAU COUNTY.

AMOS WHITING, SUPERINTENDENT.

Trempleau county contains about 800 square miles, and by the last census, 10,728 iuhabitants. The population at the present time is probably not less than 12,000. Many of the recent settlers are immigrants from Europe, the Norwegian element predominating. They have settled in the rougher portions of the county and many of them at present live remote from school-houses, and a large number of children are thus debarred from the privileges of school. But a few years will probably work great changes; roads will be built, district boundaries will be adjusted to the wants of the new settlements, school-houses will be erected, and

the whole population reasonably accommodated, if we are allowed to judge of the future by the past.

SCHOOL CHILDREN AND ATTENDANCE.

The whole number of children of school age is 4,184, an increase of 312 during the year. The whole number of days school bas been taught is 9,062—an increase of 832. The whole number of children of school age that have attended school during the year, is 2,553—a decrease of 159, and a balance on the wrong side. This leaves a grand total of 1,631 unprovided with instruction in the public schools; an ample field for educational missionary work. The classified report of the children of school age in the county, develops the following facts: The number between the ages of 4 and 7 years, is 1,108; between 7 and 15, 2,382; between 15 and 20, 732.

The number who have attended school during the year belonging to the first class, is 517; belonging to the second class is 1,700; belonging to the third class, 387. Leaving unprovided with instruction of the first class, 586; of the second, 682, and of the third, 345. This report differs slightly from the other, showing a grand total of 4,217 children of school age in the county, indicating the probability that a few children were counted twice in the classification.

EXPENDITURES-WAGES.

The amount of money expended for services of male teachers is \$5,980.00, and for female teachers, \$7,647.09. The average wages of male teachers is \$36.02, and of females, \$27.80; against \$36.27 for males, and \$27.28 for females for the year 1870. And although the average is no higher than during past years, the difference between the wages paid to superior and inferior teachers is constantly increasing.

The public sentiment in regard to education is healthful and progressive; a somewhat severe crisis has been passed favorably, and the hearty co-operation of a large majority of the people in the good work may reasonably be expected.

THE TEACHERS.

The teachers of this county have shown a commendable spirit in their hearty co-operation in their efforts to raise the standard of attainments and improve the methods of teaching in the county, although it involves a large outlay of time and money. They possess the true, professional pride, and are satisfied only while personally conscious of going higher; and I hear no complaints of the severity of the examinations, except from the few who were unable or unwilling to attend the Institutes and Teachers' Associations, and who look upon teaching as a mere make-shift for present needs.

TEACHERS' EXAMINATIONS, ETC.

During the past school year I have held eight public examinations, (most of them continuing three days,) in which considerable Institute work was also done, especially in the matter of illustrating and explaining the more difficult printed questions. This plan seemed to work well, and give satisfaction. The number of certificates granted at these examinations, was 94; of these, 4 were of the first grade, 11 of the second, and 79 of the third. Of the whole number examined, 36 were gentlemen and 58 ladies. As yet, a few districts are happy only while having a teacher who holds but a special license, but the number is decreasing. The great difference in the mode of examination pursued, and in the actual standing required in this and adjoining counties, provokes much comment, and produces some dissatisfaction. Let us have uniformity, if possible.

SCHOOL-HOUSES.

No new school buildings have been erected during the year except some cheap, temporary ones in the new districts; but many improvements have been made in those already built. District number one, Arcadia, has procured a fine bell, and several houses have been furnished with the most approved school furniture, charts, clocks, etc. Several good houses will be built next season, and the spirit of improvement is manifest throughout the county.

TEACHERS' INSTITUTES.

Two Institutes have been held in the county during the year, both of which were well attended. The first was a "short Institute," held at Galesville, commencing February 28, and conducted by Robert Graham, assisted by the state superintendent. It was attended by about fifty teachers, and by many ladies and gentlemen of Galesville and vicinity. The second, or "Normal Institute," was held at Trempealeau, commencing August 15th, continued one month, and was conducted by professors S. S. Rockwood and C. H. Allen. This was the great school event of the year, and met the approval of all classes of the people. The meetings of our "County Teachers' Association" have also been well attended, and the future educational prospect of the county is at least hopeful.

WASHINGTON COUNTY.

FRED. REGENFUSS SUPERINTENDENT.

I herewith fransmit my annual report of the condition of the schools in Washington county, and is doing so it gives me high pleasure to be able to say, that, as a whole, they are making progress in every direction. There are some schools in this county, that may be regarded as models, and are entitled to rank nearly among the best in any county. Many school districts are repairing their school houses, enclosing the sites, buying outline maps, etc. Interest is also manifested in some places, in introducing higher branches in school.

Want of punctuality on the part of the scholars attending school is a great evil, yet to be remedied. When the attention of parents is properly directed to this subject (as I always do) and they understand the evil consequences that flow from this source, I believe that a sure remedy will be applied.

WAUSHARA COUNTY.

THEO. S. CHIPMAN, SUPERINTENDENT.

During the year there has been a general interest in the schools of the county, which has resulted in marked improvement and progress. There have been very few "district quarrels," which are always detrimental to the schools, and a general satisfaction has been manifested by the people.

NORMAL SCHOOLS AND INSTITUTES.

There have been held two county normal schools and one institute. The first school, of seven weeks, was held at Plainfield, in September and October, 1870, with an attendance of 67. Robert Havenor, Esq., ably assisted in the work of instruction, and Wallace Dunn, Esq., of Hancock, gave a good lecture on Fractions. The second school was held at Auroraville, in March and April, 1871, in connection with an institute. The attendance at the school was 87, increased at the institute to 100. Daniel Cate, principal of the school at Auroraville, very ably assisted at the school. R. Graham, state agent, conducted the institute for three days and Mr. D. E. Holmes, principal of the Berlin high school, and Mrs. M. E. Holmes assisted by a number of the Berlin teachers connected it for the remaining two days. This institute resulted in much good, as the teachers picked up many of the suggestions presented on methods of teaching, and have applied them in their schools.

CERTIFICATES.

Of the 176 certificates issued, 21 were limited certificates, limited for six months.

Number of certificates granted to females 15 years of age	4
Number of certificates granted to females 16 years of age	16
Number of certificates granted to females 17 years of age	18
	38
Total number granted to females over 18 years of age	87
Number of certificates granted to males 17 years of age	1
Number of certificates granted to males 18 years of age	1
Number of certificates granted to males 19 years of age	9
Number of certificates granted to males 20 years of age	4
Total number of certificates granted to males under 21 years of age	15
Total number of certificates granted to males 21 years of age and over	36
8—SUP. PUB. INS. (Doc 12.)	

Of this number, 142 were residents of the county, and 34 non-residents. Many applicants have been refused certificates, "on account of the age of the applicant" being too young.

TEACHERS.

One hundred and seventy-two persons have been employed during the year to teach the schools, when only ninety-three (besides the number of male teachers required in those districts which have a male teacher for the winter term,) are actually needed.

We believe it would result in much benefit to the schools if districts would employ the same teacher for several successive terms. When a new teacher is employed in those districts which require a male teacher during the year, or a female teacher for the year, let it be on trial, with the understanding and expectation that said teacher will be retained by the district as long as he or she secures success in teaching in that district, and that the wages will be increased accordingly. We have too many teachers who only aim to teach one term in a district, and too many districts that only require a teacher for one term. Changing teachers every term for the sake of having a "new teacher," we believe to be detrimental to the schools.

The school-house at Centreville, in the town of Leon, was burned during the spring of 1871. A temporary building was erected and a school held during the summer.

WINNEBAGO COUNTY.

H. A. HOBART, SUPERINTENDENT.

Having received only last month the appointment to fill the vacancy occasioned by the resignation of our former thorough and efficient superintendent, Samuel Shaw, it can hardly be expected that I should become fully acquainted with educational interests of each district and town in the county, or that I should

make a lengthy report. There are very few schools holding fall terms, aside from the "graded schools," but as far as I have visited, I find them in excellent condition, and mostly under the management of teachers of long experience.

PUBLIC INTEREST.

From the observations I have been able to make, I am led to believe that the people of this county feel a great interest in the welfare of the public schools, and as a natural result, they have been greatly improved within the past few years. The people should feel grateful, as they doubtless do, to Mr. Shaw, who has labored so earnestly and faithfully to bring about an increasing interest in favor of the improvement and elevation of our schools and in creating a healthy and wide-awake public sentiment on education throughout the county. The teachers, especially, feel grateful for his efforts to improve and promote their interests. As a county, we feel the loss of one who had done so much for the educational cause; who was always so firm and so true to all that is noble and elevating in society, and essential to the public good.

THE FUTURE.

It shall be my aim to carry out the many worthy plans of my predecessor, as far as I may be able, and to vigorously sustain and defend every worthy measure that will improve the schools and promote the welfare of the rising generation. I desire to bring my whole attention to this great work, and trust that the schools of the county will meet with no retrograde movement, but that they will continue to improve and receive the approval and support of every friend of education in the county.

TEACHERS' ASSOCIATIONS.

The Teachers' Associatins have been of very great benefit to the teachers, and all who have taken part, besides creating a strong public sentiment in favor of a more vigorous prosecution of whatever seems best for our schools. We hope to continue these meetings and render them worthy of patronage.

The opening of the State Normal School at Oshkosh, under its present efficient crops of teachers, will contribute much to aid our teachers, and we hope to see it extensively patronized, and trust that its influence will be felt far beyond the limits of our county. I shall be pleased to listen to any suggestions you may feel like making, and shall also be glad to have you visit our county and its schools.

ADAMS COUNTY. *

J. W. FREEMAN, SUPERINTENDENT.

At the closing up of my second term of office, and of my official connection with the educational interests of the county, it may not be improper to furnish you with a few items relating to the condition and prospects of the schools in this county.

I am happy to believe that the educational interests of Adams county have been considerably advanced during the past few years. I will briefly refer to some points of improvement.

SCHOOL-BUILDINGS AND FURNITURE.

Fourteen new houses have been erected; most of them well built, convenient and commodious. The average cost would not vary much from \$800. The largest and finest school-building in the county is at Friendship—built last year at a cost of more than \$2,000. The house is designed for two departments, though at present but one teacher is employed—Mr. Chas. F. Crosby, late principal of the public school of Kilbourn City. Some of the old buildings have been thoroughly repaired and furnished, and are now in good condition. In many of the districts outhouses have been constructed, so that nearly every district is now supplied with at least an apology for one. Twelve districts have procured full sets of outline maps. Larger and better black-boards have been provided, and quite a number of districts have globes.

^{*} Received too late for insertion in its proper place.

IMPROVEMENT IN TEXT BOOKS.

Heretofore the great diversity of text books, and a scant supply of such books as were used, had a retarding influence upon the prosperity of our schools. This has been met by the adoption of a uniform series, in many of the districts, and providing a more general supply of such books as were needed.

The fact that the chief difference in text books written by different authors is in the employment of language to express the same ideas—fundamental principles always remaining the same—has led me to recommend that a classification of our schools be made according to the advancement of the scholars, and not according to the books used. This recommendation relates, of course, to those using the same branch, and if adopted would necessitate topical recitations. More attention has been given to the primary scholars, to which they were justly entitled. Slates and pencils have been provided, and they have been taught to write, print and draw. Even the making of pictures is not now considered a very wicked thing, as it used to be.

IMPROVED MODES OF TEACHING AND SCHOOL GOVERNMENT.

This in the main is the result of Institute work; where those of our teachers who have availed themselves of these special means for improvement have received not only thorough instruction, but have had presented to them the most approved modes of instruction.

Our teachers have been instructed to be highly practical, and to pay special attention to those branches which would be of most advantage the scholar in after life. Reading—perhaps the most important branch taught in our schools—generally comes in as a sort of wedge to fill up time. In the course of my visitations, I have been pained to see the indifference manifested by some of our teachers with regard to this particular branch, while some failed to appreciate its importance, others neglected it for want of knowledge to properly conduct the exercise. In either case the scholar was left to grope his way along as best he could, subject to no criticisms but those made by the class; thus not only

acquiring bad habits, but a distaste for the exercise, and for reading generally. We have had to meet the same erroneous practice here, which is so common in our mixed schools, namely: scholars reading in books far in advance of their years or capacity to understand. The old-time practice of giving out a certain number of chapters for a reading exercise; or a sufficient amount of matter for the class to read around at least twice, and perhaps three or four times, regardless of the importance or nature of the pieces to be read, is now discarded by all of the better class of teachers. Now, short lessons of three or four paragraphs, and a thorough drill exercise, is the order of the day.

The study of geography, is, under improved methods of teaching, made very interesting. By the use of outline maps, globes, and the indispensable crayon, the dullest scholar can be interested. A majority of our teachers give some attention to map drawing; some make it a specialty. We have taught, that in the study of geography, the scholar should commence at home; and that a clear and comprehensive knowledge of one's own country, is of greater value than a superficial knowledge of the entire globe. Hence we have given special attention to the study of the United States.

Grammar, as usually taught in our common schools, has been of little practical utility; not for any lack of familiarity with text-books, but because the real object for which Grammar is studied has been lost sight of. Too little attention has been paid to the application of rules and principles. In our institutes, the writings of impromptu composition was a daily exercise, and has been recommended as an exercise of the highest importance to all pursuing this branch.

So with regard to other branches; the object has been to impress upon the teachers, the importance of not only being thorough, but of bringing every subject within the scope of the child's capacity to understand, by object lessons and practical illustrations.

School government is not of that arbitrary and despotic types which characterized it twenty years ago; but is more generally based upon the principle that "a soft answer turneth away wrath, our words stir up anger."

WORK PERFORMED.

The duties of the office are nearly identical with those in other counties; the most important of which are conducting examinations, visiting schools, and holding Institutes. With reference to the examination of teachers, we have aimed to secure a gradual, but steady advancement of the standard. On account of the scarcity of teachers, we have been obliged to keep the standard lower than we otherwise would have done. A sufficient number of teachers must be licensed to supply the schools, and such material must be used as is furnished. We have not practiced granting indiscriminate licenses, as we have good reason to believe has been the course pursued b a few superintendents but have sometimes felt obliged to certify to what we knew was not strictly true. Can not a remedy be devised?

During the past year I have not been able to give that attention to school visitation which was intended, on account of very imperfect health. I do not, however, attach that importance to these necessarily short and unfrequent visits which many do: for, as a general thing, the character of the school when being inspecte by the Superintendent, cannot be taken as a true index of what the school was yesterday, or will be to-morrow. In one respect, however, I admit that it is highly important, as being, perhaps, the most reliable test of a teacher's tact and ability to manage a school. The Superintendent can make suggestions to teachers, and give some very salutary advice to the scholars, and go away feeling conscious of having done his duty, and at the same time have but little confidence that his suggestions or advice will be heeded. * * *

INSTITUTES.

Two four days Institutes have been held the present year Prof. R. Graham was with us in the spring, and Prof. Allen in the fall. Both these gentlemen gave good evidence of their perfect adaptation to the Institute work. The Board of Regents manifested wisdom in assigning Prof. Graham to an important position in the Normal School at Oshkosh, and no less wisdom in appointing Prof. Allen to fill the vacancy, as being without doubt the very best man in the state for the position.

It was much to be regretted that so few of our teachers availed themselves of Prof. Allen's services. In addition to the regular work of the school-room, he delivered three interesting lectures. In this connection, I must be allowed to express my high appreciation of the important personal service rendered by yourself, and your lamented predecessor, as well as the valuable and timely assistance given by the Board of Regents, either in funds or by sending an agent to conduct our Institutes. Every application made for aid, received a prompt and favorable consideration.

COMPULSION NEEDED.

Notwithstanding all of these special means for improvement, quite a large per cent. of our teachers have not been directly I have become to be strongly in favor of a compulsory school law,—or a law requiring parents to keep their children in school a specified amount of time; and I am equally in favor of an enactment prohibiting those from teaching who neglect to avail themselves of all special means for improvement, without a reasonable excuse. There is a class of teachers who are known not to be fit for anything else; and they engage in the business because they associate with it the idea of rank. thing in the shape of a license answers their purpose. ought to be some means devised of reaching this class. rule, our young teachers receive certificates of low standing. It has occurred to me whether it would not be a wise policy to require these young teachers, or all teachers, to go through a regular course of study; certain branches to be assigned them each year, in which they must be found well qualified, or be suspended from teaching till they were.

In addition to Institute work, a Teachers' Association was organized three years ago this winter. Several interesting and profitable meetings have been held. * * *

Notwithstanding adverse circumstances, I think our people manifest commendable zeal in trying not only to maintain our public schools, but to constantly increase their usefulness. There is a more general inquiry for well qualified teachers, and more liberal wages are being offered, which facts are calculated to give encouragement for the future.

REPORTS OF CITY SUPERINTENDENTS.

BELOIT.

T. L. WRIGHT, SUPERINTENDENT.

It is a fact of notoriety, that Beloit has long and justly fostered a spirit of commendable pride in the character and standing of her educational institutions. Of these, the public schools naturally enough, more especially elicit the sympathy and support of the whole people, since nearly every family has a direct personal interest of immediate concern in their success. This is doubtless the grand first cause of the generally prosperous condition of our schools, and the high standing they have gained in the public estimation. But this is not all. The recent greatly improved condition of our schools, since the consolidation of the two districts of the city into one, with one high school, results essentially from the excellent provisions of the legislative enactment whereby this union was effected—involving, of course, organization and functions of the school board—in our view as wise as beautifully unique. For particulars in this regard, reference is here made to my report for the year 1869, included in the report of the State Superintendent of Public Instruction for that year.

All departments of our schools have now commenced another year under auspices peculiarly favorable, never more so, heretofore, as we think. Our new principal of the high school (and virtually of all the schools,) Mr. Eastman, and his two lady assistants, Misses Hotchkiss and Merriam, are already established n the confidence of the people, as well as in the respect and afection of their pupils. Naturally looking to the more extended and higher culture of the older castern states for principal and

assistants of eminent qualifications, we have not been satisfied with mere intellectual ability and learning; but have sought for still greater essentials, moral qualities, with general culture, tact and skill to inspire and control. To these considerations we attach paramount importance, not content with that instruction that only makes the scholar; but earnestly insisting that each teacher shall feel a measure of responsibility for the early training of the pupils to a careful observance of the proprieties of life, inculcating correct moral sentiments, and enkindling ennobling aspirations.

Including the principal, our whole number of teachers is sixteen. These all attend the teachers' meetings, held once in two weeks, in charge of the principal. He carefully limits this meeting to one hour, so that the exercises shall not become oppressive to the teachers, after the toils of the week. His object is so to vary and adapt these exercises, as to make the meetings, seasons of pleasurable entertainment with instruction, rather than dreaded hours of tasks imposed. The teachers are expected in these interviews, to compare views as to the best modes of managing and teaching, as learned from their own experience. In short, like the members of any large basiness firm, they find it profitable, as well as pleasant, to confer together, to talk over their business matters, to take counsel of each other, to report on the past and present, and to plan for the future. This the teachers believe has far more of practical interest and benefit for the schools, than any entertainment they might enjoy in listening to lectures on literary topics; or the practice of reading before the meetings essays of their own, which cost them so much of perplexing anxiety and labor, and necessarily detract so much from proper devotion to classes in the school room.

In the high school our new principal has introduced an excellent system of weekly reports. Each pupil has a little book properly prepared for the purpose, in which is contained a daily record of attendance, deportment and recitation. This is weekly presented to the parent or guardian for inspection and signature, and then returned to the principal. From our own personal experience, elsewhere, in the use of a similar system of weekly reports, we have learned to attach much importance to it, as a means of the greatest efficiency in maintaining in school the highest degree of order, sound discipline and earnest study. We hope to have this system adopted in some of the lower grades; at least in the common schools. Although this is not made a substitute for the monthly reports to the board of education, it is deemed of far more real value in its beneficial influence on the pupils themselves.

Our course of study is essentially the same as heretofore reported, both in the high school and the lower departments.

The high school now contains 121 pupils. A large proportion of these are studying, in connection with the higher English branches, either Latin, Greek, German or French languages, in all of which we have competent, thorough instructors.

In conclusion, allow me to say, that we sustain the high school in its advanced character, not as an isolated institution, confining its benefits to the comparatively few, who even attain to membership in in it; but we regard it as of indispensable value, as the head and heart of the lower departments, diffusing through all its own hightoned light and life, offering to young aspirants the extra stimulus of a noble ambition.

BERLIN.

W. G. M. STONE, SUPERINTENDENT.

Our schools are passing through a crisis. With the year just beginning we start off with a new principal and five new under teachers. Six years Mr. and Mrs. Holmes have wrought for us and successfully carried forward the work so well begun by their predecessors. Under their management our schools have grown up into stalwart proportions. So excellent has our system become that no one of our citizens sends son or daughter away to be educated, while on the other hand many send their children here to school. Not less than fifty tuitional scholars have attended during the year.

It seemed a calamity almost irreparable to have Mr. and Mrs. Holmes leave us; yet it is with pride that we give to the State Normal School, at Oshkosh, two workers so efficient. We cheerfully feel that in leaving us they extend their field of usefulness; while with Mr. Shaw as their successor, we are hopeful and expectant. Under the new regime our schools open well and promisingly.

Our school buildings are superior—seating no less so—black-boards plenty; but in apparatus of all kinds we are as yet lacking. With this lack supplied, we would be prepared for still better work.

During the past year we have maintained a normal class, and found it of much value, and shall continue it in the future. By this means we are able not only to better fit the teachers who go out to teach our country schools, but also, in some measure to meet our own wants.

We are glad to see on the part of the educators of the state a movement looking toward a prescribed and uniform course of study for our public schools. There ought to be one, and we hope it will be given as soon as consistent with maturity and perfection. When it is done it ought to be made to dovetail into our university course, even though that should be made to undergo revision to meet the high school course.

I would add that all sects, Lutherans excepted, unite fraternally in our work. Our Catholic friends coöperate with us freely, cordially and earnestly. For all this union in our work of education, we have abundant cause for gratitude, and hope it may never cease.

FOND DU LAC.

THOMAS 8. WRIGHT, SUPERINTENDENT.

The number of pupils enrolled is 3,517. The number in this city, August 31, 1871, between the ages of 4 and 20, was 5,336. The number of schools is 38, in which were employed 47 teachers; viz.: in the high school, 3; in the grammar department, 4; and 34 in the primary department. I am happy to report our schools are still prosperous.

GREEN BAY.

A. H. ELLSWORTH, SUPERINTENDENT.

It affords me great pleasure in stating a very prosperous condition of the public schools of this city. During the past year we have completed and neatly furnished a brick building of six rooms, with large and ventilated play-rooms in the basement. The building seats, with single desks, 250 pupils, leaving ample room for class and other drill.

Our Board has retained a large portion of its teachers in the departments, where they have given good satisfaction, believing it a better plan than to change by promotions.

The past year has been marked by decided progress, the number in attendance having increased and the interest manifested by the patrons has never been as great as during the past year. Their visits at the school-rooms have increased more than seventy-five per cent. This hearty co-operation between parents and teachers has done more for our schools than all other efforts combined.

JANESVILLE.

LYMAN J. BARROWS, CLERK OF SCHOOL BOARD.

The schools opened August 29, 1870, with a corps of teachers selected with care, and possessed of more than the ordinary enthusiasm for the work. The teachers entered school with an understanding of the duties to be performed, having been specially instructed by means of printed circulars, oral teaching and exemplification of methods, with a view to effect a unity of purpose and a similarity of process.

Twenty-six teachers were employed until September 27th; then twenty-six until January 9th, and twenty-seven through the remainder of the year. The changes in teachers have been detrimental to the schools.

In each of nine situations has been one teacher only; in each o. ten situations have been two teachers; in each of five situations have been three teachers; in each of two situations have been four

teachers: in one situation there have been five teachers; making 57 appointments of 40 different teachers, with 17 transfers of teachers from one department to another, during the year. Many of these changes were unavoidable, yet fewer changes would have occurred under the payment of salaries equivalent to the salaries paid by neighboring cities. Instability in the teaching force of a few departments has prevented the progress expected. Pupils have found their time consumed in learning forms instead of facts; and especially is this criticism applicable to those positions where three, four, or even five teachers have succeeded each other dur-Pupils become inattentive, insubordinate and, ing the year. frequently, openly rebellious, under changes in discipline; thus, not only dissipating the energy of the school, but forming irregular habits, of thought and action, which can not make good citi-The first term continued four months, closing December The second term commenced January 9th and continued 16th. three months, closing March 31st. The third term commenced April 10th and closed June 30th, having continued three months, and making ten months in the school year.

Sixteen departments were organized at the commencement of the year: the third Grammar Department, located in the first ward building, was added September 26th, making in operation at the close of the year, primary departments 8; intermediate departments, 5; grammar departments, 3; high school department, 1: total departments, 17.

All the schools have made a creditable advance in attendance, and have correspondingly improved in scholarship.

In 1869-70 the average number of members was 1,126, and the actual attendance was 1,004 every day; in 1870-71 the average number of members was 1,109—seventeen less than the preceding year, and there was an actual attendance of 1,027 pupils—

twenty-three more than the previous year, owing to a greater regularity in the attendance of those who were members.

With the membership of 1869-70, there was a possible attendance of 218,280 days, and an actual attendance of 193,828 days; in 1870-71 there was a possible attendance of 216,333 days—1,947 days decrease—yet the actual attendance was 200,019 days—an actual gain of 8,127 days attendance.

No comment is necessary upon tardiness, other than to repeat that in 1869-70 there were 10,965 cases; in 1870-71 there were 3,387 cases, a decrease of more than 70 per cent.

The pupils have gradually acquired more systematic habits of study, and have entered more fully into sympathy with the graded system. The importance of thoroughly preparing and reciting every lesson has been more fully recognized, until now, sickness of pupils, inclement weather and bad traveling constitute the principal causes of retardation.

Monthly examinations have been held throughout the year, of of all grades above the primaries, by means of written and printed questions and written answers. By means of these examinations individuals and grades have been promoted or retrograded according to circumstances, and thus a constant ambition to do more than the average work of the grade, has encouraged the strong and stimulated the weak. These examinations would be rendered yet more effective by spreading the entire standing of the grade and of each member thereof before the parents. A glance would thus indicate just where to apply stimulus or to place a check.

In the several schools the grades are distributed as follows:

Second Grammar	grades

In the supervision of the schools Superintendent Parker has endeavored to be familiar with the details of work done by every teacher, and so to direct the management of each department, and the instruction of the pupils of the grades therein, as to make the whole schools a unit, so as to best prepare the children for citizenship.

With these ends in view, he has inspected the departments at least twice a week, and has exemplified class drill, school management and other details, as cases demanded. It is believed that the performance of these duties, the encouragement of teachers and pupils, the harmonizing of interests otherwise in conflict as between teachers, pupils and parents, have done much to create a strong sentiment, and to promote the general welfare.

Teachers' meetings have been held semi-monthly, and have been a valuable means of promoting the fervor of teachers. The teachers have worked at these meetings with enthusiasm and their attendance has been quite prompt and regular.

Except the high school, which was regraded, by order of the board, September 26th, each grade of the public schools resumed the study where it was left at the end of the year 1869-70, and prosecuted it through the year.

As a whole, the pupils of the city public school are believed to have made progress in study, in general discipline, and in loyalty to properly constituted authority during the year 1870-71.

OCONTO.

D. P. MORIARTY, SUPERINTENDENT.

Upon my accession to office I found the schools in rather an irregular condition; governed, each one, according to the respective opinions of each teacher, without a standard—without method. I immediately inaugurated the graded system, establishing ten grades, based on those regulated by the Milwaukee schools.

As my report shows, I established a regular series of teacher's meetings, which have been conducted in turn by the teachers; and I am led to believe that they must have been of great benefit to the participators. I also caused to be formed a teacher's association, with a view to secure a basis for some literary entertainments, during the winter season especially, and for the future establishment of a library. My aim was to create, if possible, among the young a desire to read select writing, and to secure a means by which idle hours may be turned to some advantge.

In these efferts I met the hearty co-operation of every teacher, and there appeared to be an anxious desire on the part of the citizens to assist us. I advanced as far as the selection of suitable places for books, magazines, etc., and procured catalogues and specimen copies of binding, etc., from the leading houses in the country. It however appeared to some unusually erudite spirits that volumes of science and learning, folios of lore and history, calf-skin and moroco, should spring up, as if by magic, from pittances—paltry at that—and ignorance, with its twin, little petit jealousy, stepped in and feared least one should disturb the great American Republic by our recent desire of improvement. I have left the good work to be followed up, for yet a while, by other minds, for trial, hoping in all cases for future success.

Our schools are prospering, our attendance is good, the grades of teachers' certificates improved. I continue to urge ambition for higher and more respectable grades.

WATERTOWN.

W. H. ROHR, SUPERINTENDENT.

By the additional statistics required this year a report it is more like a report and you may better judge of the efficiency of the schools in the different parts of the state. It appears, that all children from 7 to 15 years, this being the average period of our children who attend school, are enrolled and do attend at either the public or denominational schools in this city without legal compulsion. The attendance is still improving, it being 3 per cent higher than last year 95 per cent. Teachers wages have been raised by the Board of Education, and our teachers feel thas their noble work is appreciated. A fine \$600.00 brick school-house is now in the course of erection and a \$1600.00 site purchased for the 4th Union school in this city, to be built so soon after this, as may be convenient. The expenses of carrying on our schools have been about the same this, as last year after deducting price of site and other expenses of building.

As a whole the cause of education is all that may be desired in this city.

ANNUAL REPORT

OF THE

BOARD OF REGENTS

OF THE

UNIVERSITY OF WISCONSIN,

For the Fiscal Year ending September 30, 1871.

BOARD OF REGENTS.

STATE SUPERINTENDENT OF PUBLIC INSTRUCTION, Ex-Officio Regent.

JOHN S. DEAN, Secretary.

STATE TREASURER, Ex-Officio Treasurer.

Executive Committee, N. B. VAN SLYKE, J. C. GREGORY, R. B. SANDERSON.

Farm Committee, R. B. SANDERSON, B. R. HINCKLEY, H. H. GRAY.

ANNUAL REPORT.

To his Excellency, the Governor of Wisconsin:

Siz:—I have the honor herewith to submit the annual report of the Board of Regents of the University of Wisconsin, for the year ending September 30, 1871:

PRESENT CONDITION AND NEEDS OF THE UNIVERSITY.

Faculty.

Since the last annual report, the Regents have secured the services of a President, in the person of Rev. J. H. Twombly, D. D., of Boston, who entered upon his duties with the opening of the present collegiate year. His high character, and long experience in collegiate and educational management, with his energy and practical knowledge, lead the Board to congratulate themselves and the University upon the good fortune which enabled them to place him at the head of the University.

The Board have also the pleasure of announcing the election to the Professorship of Military Science and Engineering, of Major W. J. L. NICODEMUS, a graduate of West Point, who unites much experience in teaching the studies of his department, with entire fitness in qualifications. The vacancies which existed in the above positions at the date of the last annual report, are thus filled, enabling the Board to announce every department of the University in complete working order.

Attendance.

The present or first term of this collegiate year has opened with a greater number of students than ever before, and the

labors of the whole corps of instructors have been fully taxed. The Regents have great satisfaction in reporting the utmost harmony in the Faculty, from highest to lowest, and a cordiality between teachers and students which has called forth a marked energy and progress in studies, and a general good conduct on the part of students. Instances of ill conduct calling for discipline are very rare, and few exceptions are found to diligent study.

The college classes are above the average of former years, both in numbers and scholarship, while an unusually large number of the preparatory students are fitting for the regular courses. Every feature of the present points to a steady growth in numbers and widening usefulness.

Buildings, Improvements and Repairs.

The Legislature of 1870 appropriated \$50,000 for the erection of a Female College building—the first instance of an appropriation by the State for University buildings. With this the Regents have built a fine stone structure 50x75 feet, with a wing 40x87 feet, all three stories high and basement. It is provided with porticos, piazzas, and ample halls and recitation rooms, the conveniences of water distribution, closets, furnaces, laundry, cooking range, &c:—the basement arranged for domestic uses. It is entirely completed, everything included, plans, specifications, wells, cisterns and building—at a cost of \$46,570.36, leaving in Treasurer's hands, \$3,429.64 balance, which has been used in partially providing suitable furniture.

The building for military drill and gymnastic purposes has since the date of my last report, been finished, as also the Labaratory for analytical chemistry and metallurgy, the cost of which has been paid in part from funds of the current year, thus apparently increasing the sum expended for improvements. The improvement fund is charged \$39,123.64, from which deduct payments for Female College, \$33,957.49, leaving balance paid for other improvements, \$5,166.15. The grounds have been much improved by clearing up, opening roadways, and putting out trees, and the older buildings have been generally repaired, painted, &c., at a cost of \$2,259.01.

Female College.

The completion of the Female College building and its opening, marks an era in the history of the University. While other high educational institutions of the country have opened their doors to the young women who seek college education, we claim for our State, a step in advance of all others, in making such provision that the young women may avail themselves of all the privileges of the University, or may choose their studies entirely within the limits of a Female Seminary of the highest character.

The Regents take great pride in the perfection and excellence of the Female College building, and in the arrangements for the education and cultivation of the young women of the State, and they especially invite attention to this department, and the low rate of charges—the whole annual expense not exceeding one hundred and seventy dollars for the collegiate year—which is believed to be less than one-half the cost at similar institutions. At the present writing of this report, the Board of Regents have not been able in full meeting to lay down distinct rules for its governance; but in advance of such meeting, instructions have been given to the President of the University to adopt such a course in its management as will preserve its distinctive character as a Female College. As such, and under its present control, we believe it will take rank with the highest in the land.

The growing conviction in the public mind for many years back, that very many avocations might be fairly opened to women, who had thus far in the history of the race been debarred from them, has borne fruit in a liberal acquiescence to woman taking her place in the acquisition and practice of some of the scientific professions. An offshoot of this tendency of opinion, is the theory now advanced of educating the sexes together in all the departments of academic and college pursuits. This subject of co-education is one that has its advocates in every village and county of the state, has been frequently brought to the notice of the Regents, and has received from them attentive consideration. It is vehemently urged, that in their collegiate

course, no distinction should be drawn between the sexes; that in study, in discipline, in recitation and lectures, the women should be required to take their places on the same footing with the men. The chief reasons alleged by the advocates of this system are, its refining influence upon the men, the great stimulus to study to both sexes; and further, that the system has been found to work admirably in the schools and academies at home.

These arguments have great force when applied to students at home, where they pass from the control and oversight of the parents, directly to that of the teacher, and thence back again to the family. It is very different when several hundred young men and women from different parts of the state, strangers to each other, meet at the University as college students, thrown together for a course of several years of study and college life. In such a case, the continual guardianship exercised by the parent and teacher is removed, and the students left much to their own discretion and propriety of conduct; while any dereliction or failure to meet the just expectations of their friends, would be charged directly to the University. It is for these reasons, that instructions have been given to carry out a system of education for the Female College, which while it opens every department of the University to both sexes alike, yet leaves to the choice of the lady students as ambition or taste may dictate—to pursue in their own college under lady teachers—or with the regular college classes, the studies in which they desire full accomplishment.

This course I feel assured will commend itself to the friends of education, for while it complies fully with the organic law of the University, in extending equal privileges to male and female students, it is yet a conservative course, midway between the theories of those who would ride a hobby to personal popularity. and that of fogyism which yields nothing to the demands of a growing public opinion.

NEEDS OF THE UNIVERSITY.

A State institution of learning, in order to prosper, must be fostered and cared for by the State alone. It is not an object of

private munificence as is the case of colleges founded by individual gifts, but must rely solely on the good will and care of guardians of the State.

The State of Michigan has given to its University an annual appropriation of \$20,000, has erected all its buildings, and during the past year has erected an additional building at an expense of \$75,000. The same State has given to its agricultural college (a separate institution, and located in a different part of the State), since its establishment, a no less sum in lands and money than \$390,000.

In Wisconsin, a State of about equal population and wealth, with a University no way inferior (save numbers), in all the high characteristics of a great school, there has been given as follows: To the University for one college building, \$50,000. To its Agricultural College, nothing. For the latter, the Regents as vet have never asked for an appropriation. Its incorporation as a part of the University, saves the State from the necessity of any separate appropriation, while the combined advantages to students are apparent to all. As the University grows with the wealth and numbers of the State, its expenses increase, and it has been only by the closest scrutiny of every expenditure that the Regents have been able to keep within the limits of the annual income.

There is urgent need of books for the library; of apparatus for the school rooms and laboratories; for enlargements of the cabinets of natural history and mineralogy, and for maps and furniture, all essential for thorough teaching, but entirely beyond the means at the disposal of the Regents.

A stringent need is for a public hall or chapel. I have heretofore called attention to this great want. It is a necessity, and
calls for prompt attention. It is important in the highest degree,
that the University should have one room large enough to
assemble all the students under the eye and voice of the President once each day. We have no room of sufficient size to enable
the largest classes to recite together—none where the usual
devotional exercises can be had in the presence of the whole
school. An observatory is an essential part of a great school—

but it is one which for a time we can do without, while the other needs enumerated are absolute. The regents believe these wants will be appreciated by all who take interest in the growth and development of our chief high school, and that the Legislature will give the University a chapel and such an annual appropriation as will enable the Board to meet these pressing calls.

I invite your attention to the closing paragraph of my last annual report, in reference to the importance of such legislation as will enable the Regents to reserve from sale a portion at least of what remains of the University and Agricultural College lands. These lands amount to something over 200,000 acres, and are located almost entirely in the northern portion of the state. The present and prospective development of the northern counties, by the building of a net-work of railroads, will tend greatly to enhance the value of these lands. Must these lands all be sold at the minimum price of \$1.25 per acre, when a few years will so immensely increase their value? If from the original endowment grants by Congress, there had been reserved until now, ten per cent. of the lands, we should have had an endowment second to no college in the country. If we can now reserve twenty-five per cent. of the lands that remain of all the grants, for a period of twenty years or so, a future generation of students will be able to reach all of the prosperity which the most sanguine of the friends of the University have ever hoped for it. Let not our posterity have to say of us that we ignored for them all the powers this generation holds in its hands, to lay such broad and deep foundations for our University, as shall hold it up for ages to come as a beacon light, reaching and searching with its rays for every path that leads in the direction of true Progress. I also invite your attention to the organization of the Faculty and Instructional Force, the Reports of the Dean of the Law Faculty, the Professor of Agriculture, as also those of the Secretary and Treasurer, herewith appended.

C. S. HAMILTON,

President Board of Regents.

APPENDIX.

FACULTY AND INSTRUCTORS.

J. H. TWOMBLY, D. D.,
President, and Professor of Mental and Moral Philosophy.

JOHN W. STERLING, Ph. D.,
Vice President, and Professor of Natural Philosophy and Astronomy.

JOHN B. PARKINSON, A. M., Professor of Mathematics.

STEPHEN H. CARPENTER, LL. D., Professor of Logic, Rhetoric and English Literature.

> WILLIAM F. ALLEN, A. M., Professor of Latin and History.

ALEXANDER KERR, A. M., Professor of Greek Language and Literature, and Principal of Preparatory Department.

JOHN B. FEULING, Ph. D.,
Professor of Modern Languages and Comparative Philology.

W. W. DANIELLS, M. S.,
Professor of Agriculture and Analytical Chemistry.

JOHN E. DAVIES, A. M., M. D., Professor of Natural History and Chemistry.

ROLAND D. IRVING, A. M., E. M., Professor of Geology, Mining and Metallurgy, and Curator of Cabinet

MAJ. WM. J. L. NICODEMUS, A. M.,
Professor of Military Science and Civil Engineering

R. B. ANDERSON, A. M., Instructor in Languages. Hon. L. S. DIXON, LL. D., hief Justice of the Supreme Court of Wisconsia. Professor of Law.

Hon. ORSAMUS COLE, LL. D.

Associate Justice of the Supreme Court of Wisconsus.

Professor of Law.

Hon. WILLIAM PENN LYON.

Associate Justice of the Supreme Court of Wiscons

Professor of Law.

Hon. HARLOW S. ORTON, LL. D., Dean of Law Faculty.

> J. H. CARPENTER, Esq., Professor of Law.

WILLIAM F. VILAS, I.I. B., Professor of Law.

THOMAS D. CHRISTIE, Instructor.

STEPHEN LEAHEY, PH. B., Instructor.

MRS. D. E. CARSON, Preceptress.

MISS JOSEPHINE MAGOON, Assistant Preceptress.

MISS LIZZIE S. SPENCER, PH. B., Instructor.

> Miss ELLA SAGE, Music Teacher

I. COLLEGE OF ARTS.

The College of Arts is organized under the following section of the General Laws of 1866, chap. CXIV:

"Section 2. The College of Arts shall embrace courses of instruction in the mathematical, physical and natural sciences, with their applications to the industrial arts, such as agriculture, mechanics and engineering, mining and metallurgy, manufactures, architecture and commerce, in such branches included in the College of Letters as shall be necessary to a proper fitness of the pupils in the scientific and practical courses for their chosen pursuits, and in military tactics; and as soon as the income of the University will allow, in such order as the wants of the public shall seem to require, the said courses in the sciences and their application to the practical arts shall be expanded into distinct colleges of the University, each with its own faculty and appropriate title."

The plain object of this section is to provide, not only for a general scientific education, but also for such a range of studies in the applications of science as to meet the wants of those who desire to fit themselves for agricultural, mechanical, commercial, or strictly scientific pursuits. The course of study is such as to provide a sound education in the elements of science, and at the same time to give great freedom in the selection of studies according to the choice of the individual student. As higher demands are made, they will be met by adding to the list of elective studies, and by the enlargement of the Faculty of Arts, so as to form distinct colleges, as provided for in the act of reorganization.

The Departments of Agriculture, Mining and Metallurgy, and Engineering are branches of this college.

Those who wish to make Agriculture, Mining and Metallurgy,

or Engineering specialities, pursue the course of study prescribed in those Departments, but all the scientific instruction in this College is given with special reference to Agriculture and other useful arts.

DEPARTMENT OF AGRICULTURE.

1st. It is the design of the University to give in this department to the graduates of colleges, and to others of proper age and acquirements, a thorough course of instruction directly pertaining to Agriculture, which will enable them to conduct the operations of a farm both intelligently and profitably.

This course is so arranged that the instruction in the class room can be completed in a single year by students already well acquainted with the physical sciences, while an opportunity will be given to those who desire it for extended laboratory practice, for a higher course in Botany, and for instruction in conducting experiments in Agriculture and Horticulture, thus making a full three years course of study.

2d. To give a wide range of optional studies in connection with the department of Philosophy, so as to secure a three years course of instruction, that will combine thorough mental discipline with theoretical and practical knowledge of the relation of science to Agriculture.

With these ends in view, the studies have been so arranged that a student may devote his entire time to Agricultural studies, or he may take one study from this course, and such studies from the Department of Philosophy as he is able to pursue.

He can graduate when he has completed a course equivalent to that in the Department of Philosophy.

Students in this, as in all other Departments of the University, can enter at any time on examination, can pursue such studies as they choose, and receive a certificate of attendance.

Special attention is called to the following characteristics of the course:

BOTANY.—Besides a thorough course in Structural, Physioogical, and Systematic Botany, that will familiarize the student with the characteristics of the Natural orders, and their relations to each other, the course in Practical Botany will teach him the habits, extent, and relative importance of those species that are of practical interest.

PRACTICAL AGRICULTURE.—In this branch of instruction it is the design to give a thorough discussion of the most approved methods of conducting the practical operations of the farm, to give the results of well tried experiments, and the principles to be deduced from them, and to show how experiments must be conducted to male them of practical value.

To aid this department, the University farm will be used, as rapidly as it can be brought into suitable condition, for the conducting of experiments in Agriculture and Horticulture.

METEOROLOGY.—Besides the general principles of Physical Geography, and the laws of the formation and disposition of dews, frosts, etc., instruction will be given in the changes of climate produced by man, in building levees, in draining wet districts, and in the removal or planting of forests.

In Horriculture, instruction will be given in forcing plants by artificial heat, in the various methods of artificial propagation, in the economic value of small fruits and the most approved methods of producing them, and in the general principles of laying out and beautifying ornamental grounds.

CHEMISTRY.—By reference to the course, it will be seen that as soon as the student has been made thoroughly acquainted with the elements, and the general principles of chemical affinity and combination, instruction will be given him in the laboratory, where he will, with his own hands, apply the tests required to determine the composition and properties of bodies, and thus become practically familiar with the methods used in chemical investigations. It is intended to make this course sufficiently thorough to fit him to enter upon a higher course of quantitative chemical analysis, should he desire it.

It will be seen that Organic Chemistry is taught with particular reference to its economic applications.

In Agricultural Chemistry proper, the course is sufficiently ex-

tended to give the student a thorough knowledge of the relations of Chemistry to Agriculture, and its applications to the various operations of the farm.

Zoology.—The entire course of this science is given with particular reference to the demands of the farmer. And in addition to the principles of classification and history of domestic animals, it is believed that the course in Entomology will prove of great value—teaching, as it does, the habits of injurious species, and the means of destroying them or of preventing their depredations.

Forestry.—The instruction in Forestry will include the best methods of cultivating forest trees, and the relative value of different varieties of trees for timber, for fuel, or for screens to modify the effect of severe winter winds.

Industrial Statistics.—Under this head it is proposed to give an account of the industrial productions of the country, and their relative commercial value.

HISTORY OF AGRICULTURAL EDUCATION will consist of a brief account of the efforts that have been made in this and other countries, to advance the interests of agriculture, by the direct application of science.

In addition to the studies on agriculture, courses of lectures will yearly be given by the President, the resident Scientific Professors, and by Professors and Lecturers from abroad, who have made a special study of the various subjects relating to agriculture. By the employment of non-resident lecturers, the University will have the benefit of the scientific knowledge and practical skill of gentlemen in this and other States whose services as permanent professors could not be secured.

In the present state of agricultural education, any course of study may be regarded as an experiment. An institution, or any department of instruction in it, must be modified until it meets the wants of the people. Their wants will be learned by the demands the students make for instruction, when different courses of study are presented for their acceptance.

The foregoing course of study is believed to be one that will,

in the main, meet the requirements of the agriculturists of the State, embracing as it does, either as a distinct agricultural course, or in connection with the department of Philosophy, a full educational course, such as those Agricultural Colleges that have been most successful have adopted after years of experience.

The land given by congress has been located, and when sold will afford abundant means for carrying on this department in the most liberal manner. In the mean time every effort will be made with the means now at the command of the University, to meet the wants of all students who present themselves, as well as the reasonable demands of the people.

DEPARTMENT OF MILITARY SCIENCE.

Physical culture, so long neglected in the schools of this country, is now everywhere claiming the attention of educators. Cultivated intellect, in the absence of muscular energy, is inadequate to promote the welfare of society, or the happiness of its possessor. Aware of this fact, the Regents have adopted means to secure the physical training of the students. The Military Department is thoroughly organized and placed under the direction of Major W. J. L. NICODEMUS, late of the United States Army. By action of the Board of Regents, military drill is required of all the members of the Sophomore and Freshman Classes, who must provide themselves with the prescribed uniform, on consultation with Major NICODEMUS. This uniform is cheap, neat, and suitable for ordinary wear. It is expected that many students not connected with these classes, will join the bat-This is earnestly recommended as furnishing a most Students will be required to drill only three healthful exercise. hours a week. Those who join the battalion will be subject to all the rules of the Department, and cannot withdraw without special action of the faculty.

A commodious building has been erected for a Drill Room and Gymnasium.

Rules and Regulations for the Government of the Department of Military Science in the University of Wisconsin.

ARTICLE I.

Organization.

- 1. All students of the Sophomore and Freshman and those the other classes who may so elect, shall be organized into a Battalion of two or more companies under the command of the Professor of Military Science.
- 2. Each company shall be designated by a letter of the alphabet and officered by one Captain, two Lieutenants, five Sergeants and eight Corporals.
- 3. The number of officers and non-commissioned officers as provided for in the preceding paragraph will be appointed by the President of the University in consultation with the Professor of Military Science.

ARTICLE II.

Uniform.

- 1. There shall be adopted a uniform dress, to consist of a sack coat, pantaloons and forage cap.
- 2. The sack coat shall be single breasted, of dark blue cloth one row of four buttons on the breast; turn-over collar; three small buttons on each cuff; pockets on the inside; top button on breast to be well up to the throat.
- 3. Pantaloons.—The pantaloons to be made of the same material and color as the coat, and made up plain with no trimmings.
- 4. Cap.—The forage cap to be of the same material and color as the coat, of the army pattern with a gold wreath enclosing the letters U. W. The wreath to be worked on black velvet and the letters to be embroidered in silver.
- 5. Button.—The button of the coat and cap to be of the same \ pattern as that of the general staff corps of the U. S. Army, with the addition of the letters, U. W., stamped upon it over the eagle.
- 6. Equipments.—The equipments and ensignia of rank shall be like those worn by officers and non-commissioned officers of the same rank in the U.S. Infantry.

ARTICLE III.

Military Exercises.

Practical instruction in the School of the Soldier, Company and Battalion; Skirmish Drill and Target Practice.

ARTICLE IV.

Military Science.

The following are the text books in use in this department, viz:

Smith's Topography.

Mahan's Military Engineering.

Mahan's Advanced Guards, Out Posts, etc.

Benet's Military Law and Practice of Courts Martial.

Benton's Ordnance and Gunnery.

Upton's Infantry Tactics.

United States Tactics for Field and Garrison, Artillery and Cavalry.

United States Manual of Signals.

United States Army Regulations.

ARTICLE V.

The Board of Regents at its Annual Sessions will forward to the Governor of the State, the names of five students who have gone through the above course, standing first on the list according to merit in their studies and military deportment, who shall be recommended to the War Department as proper persons to receive the appointment of Second Lieutenants in the Regular Army.

DEPARTMENT OF ENGINEERING.

This department is in charge of Prof. W. J. L. NICODEMUS, a graduate of the United States Military Acamedy.

The object of this department is to give its students such instruction in the practice of Civil Engineering as to fit them, after a moderate amount of practice, in the field, to fill the higher positions in the profession.

This department has lately been re-organized by Prof. NICODE-MUS. The course of Instruction is full and practical. Means 2—(App.)—SUP. PUB. INS. have been taken for securing the best European instruments and Models for teaching Engineering.

Students are permitted to take any part of the course for which they are fitted.

The requirements for commencing the Engineering Course are the same as those for entering the Junior class of the College of Arts.

DEPARTMENT OF MINING AND METALLURGY.

This department was established by the Board of Regents at their last annual meeting. The object of this department is to furnish instruction in those branches of science, a thorough understanding of which is essential to the intelligent worker either in mining or metallurgy.

Admission.—Students who have completed the Freshman and Sophomore years of the College of Arts, may enter at once upon the studies of this department. Persons wishing to pursue this course who have not previously been students of the University, and who are candidates for a degree, must pass examination on the studies of the Freshman and Sophomore years.

THE COURSE OF STUDY will be arranged in detail at the beginning of the collegiate year. The course will occupy two years, and will be so arranged that all studies which should precede the course required in this department will be given in the Freshman and Sopohmore years of the College of Arts.

Laboratories completely equipped have been prepared for practical instruction in Analytical Chemistry, Assaying, Determinative Mineralogy, etc. Collections of Minerals, Ores, Rocks, Fossils, etc., are available to the student, and will be added to from time to time. The above information merely gives an outline of the work to be done by the new department. In some particulars, and especially in the large Assay Laboratory, just fitted up, the University has advantages not possessed by any other Western institution.

DEPARTMENT OF LAW.

The Law Department of the State University was organized and put in practical operation in the year 1868, and its success has been gratifying in the highest degree. The great advantage of professional schools for the rapid and thorough elementary training of professional men has been long since completely demonstrated, and no profession has more entirely accepted and heartily acknowledged the benefits of such schools than the legal profession.

The learning of this profession embraces almost all the relations of life, and as it is the result of the experience of many ages, is scattered through very numerous volumes of treatises, reports, statutes and digests. To obtain the mastery of the numerous topics embraced within the limits of the body of the law in such degree of perfection as marks the learned lawyer, requires many years of diligent study and practical experience.

This result is not to be attained by any mere student. What the beginner wants is to gain a comprehensive general view and analysis of the whole system, then to learn, without the careful reading which would occupy a lifetime, what the books contain, and where to search for more particular and detailed information; and to acquire the habits and modes of legal study and thought.

Superadd to this an acquaintance with the rules and principles of practice in the Courts, and the Student is prepared to begin the work of life.

This degree of attainment can be reached in the professional school in at least half the time that the student can otherwise acquire it, and with the additional advantage that there is no incumbrance of obsolete ideas or mistaken impressions, which are so difficult for any but a lawyer to distinguish from living doctrine among the great mass of legal writings.

To afford to the young men of Wisconsin and the Northwes ready facilities for such requirements, this Department has been established by the State University.

The Method of Instruction is for the most part by lectures, and by reading under the direction of the professors, with most

court practice. The lecture system is peculiarly adapted to the study of law. Few text books are written for students. The most elementary works are designed as exhaustive treatises for the use of lawyers, and embrace not only the history of the growth of the doctrines, but also a discussion of the subject in far more detail than the student can advisably pursue so early. The lectures give a clear analysis of the subject under discussion, not involved with that which is obsolete or too minute.

The practising lawyer, acting as instructor, can refer the student to just such parts of the text books and to such adjudications in the reports, as present in the best manner the principles which it is important to know. This system of reading cases in connection with text books is of the first usefulness.

The Moot Court will be held weekly; and here the students are taught to perform, as students, just what they will be required to do as lawyers. The preparation of pleadings and the argument of questions—all selected from actual cases occurring in practice, and designed to illustrate the subjects discussed in the lectures—under the direction of the Dean of the Faculty, formerly one of the Circuit Judges of the State, will afford to the student unsurpassed facilities for acquiring a practical familiarity with the modes of administering the law. To those who know the difficulty with which the young lawyer acquires the easy confidence necessary to successful practice, this part of the school will especially commend itself.

An additional means to the same end, consists in the forming of clubs, by the students themselves, for which the instructors will afford every assistance, and the use of the lecture room is granted.

A certificate of graduation from this department vill entitle the student to admission to practice in all the courts of the state.

The peculiar advantages which the city of Madison, as the capital of the State, affords the students of law, deserve mention.

All sessions of the Supreme Court are held here, and also one term of the U.S. Circuit and District Courts annually. The

Circuit Court for the County of Dane holds three terms annually; so that there is almost constantly some court in session.

The Law Library of the State, which is probably the largest collection of the kind in the Northwest, is at all times accessible to the Students. The advantage of this library to the Student can hardly be over-estimated. He can here become familiarized with series of reports and with many treatises which are rarely found in private libraries.

The Miscellaneous Library of the State Historical Society, numbering over 30,000 volumes, is also open to the Students of this school.

Admission.—Students will be admitted at any time; but those who are not Collegiate graduates must be 20 years o fage to enter this Department.

No examination for admission is required.

Credentials of good moral character must be furnished.

II. COLLEGE OF LETTERS.

The course pursued in this College is the usual classical course, consisting of a complete course in Classics, Mathematics, Science and Literature, and is intended to be fully equal to that pursued in the best Colleges in the country. While great care is taken by the authorities of the University to furnish young men with the means of obtaining a thorough preparation for the various departments of business, those studies which enable the student to secure the treasures of ancient wisdom and bring him into sympathy with the great thinkers of past ages will receive a requisite share of the time of instructors and students.

PREPARATORY DEPARTMENT.

The object of this Department is to fit young men for entering either the College of Arts or the College of Letters. It is not designed to do the work of Common Schools. Each member of the Faculty has a general direction of the studies pertaining to his department, and renders such assistance as may be required. Those who enter this Department are subject to the same rules, and allowed the same privileges as College Students. Many apply who are not fitted to enter. To prevent disappointment, application should be made by letter, stating the age and acquirements of the applicant.

Candidates must not be under twelve years of age, and will be examined in Reading, Spelling, Penmanship, Arithmetic through Interest, English Grammar and Descriptive Geography.

The Preparatory Course for the College of Arts, is as follows:

First Term. Physical Geography.

History of the United States—Scott. Elementary Algebra—Robinson.

Second Term. Arithmetic—Robinson.

Modern History—Labberton's Outlines.

Elementary Algebra—finished.

Third Term. Sentential Analysis—Greene. History of England—Smith. Plane Geometry—Loomis.

The Preparatory Course for the College of Letters, consists of the studies given above, and also of the following:

Allen's Latin Grammar, Lessons, Reader (to p. 174) and Composition; Four Orations of Cicero; Leighton's Greek Lessons; Goodwin's Greek Grammar and Reader; History of Greece and Rome, (Smith); Classical Geography and Antiquities.

Note.—The following three years' course is recommended to students who prepare for the College of Letters:

First Year. Latin begun; Physical Geography; Arithmetic; Sentential Analysis; History of United States, Modern *Europe and *England.

Second Year. Latin, continued; Greek, begun; Ancient History, Geography. etc.

Third Year. Latin and Greek, continued; Elementary Algebra; Plane Geometry.

POST GRADUATE COURSE.

Bachelors of Art, Science and Philosophy, will be admitted to the University as candidates for the degree of Doctor of Philosophy. They must devote two years to study under the direction of the President and Faculty, and pass a satisfactory examination before the Board of Examiners appointed by the Regents.

The studies are optional but they must be selected from at least two sections, and the studies in some one section must be continued during the whole course.

Students who have pursued this course for one year, on satisfactory examination, are entitled to the Master's Degree.

The object of this course is to secure a higher degree of scholarship in Literature and Science than it seems possible to attain in the present state of our colleges, under the ordinary class system.

Those who enter upon it will receive all needed counsel and instruction; but they will be encouraged to pursue their studies as specialties, not limited as to time or interfered with by other studies as in the College course.

^{*}Anderson's General History and History of England are recommended as substitutes for those above.

III. FEMALE COLLEGE.

The course of study in this College is similar to that in the College of Arts, and is designed to be fully equivalent to it.

In addition to the prescribed course, young ladies will be instructed in any study taught in the College of Letters or Arts; for which they are prepared. They may also attend all University lectures.

Ladies and gentlemen will unite in class exercises when, in the judgment of the Faculty, such an arrangement shall be desirable.

Students who do not desire to graduate may enter at any time, and pursue any study of the term for which they may be prepared.

The Female College building now in process of erection will be completed early in October; until that time the South College building will be occupied by the members of this College, and will be under the immediate charge of the Preceptress, who, with her associate teachers, will reside in the building.

This edifice has rooms for the accommodation of about eighty ladies. Besides these private rooms, there are others for the use of pupils in Music, Painting and Drawing; also a commodious and well furnished Hall for the use of the Castalian Society, organized by the ladies of the College.

The new building will be spacious and elegant, and will furnish accommodations for at least eighty students. It will also contain rooms for the accommodation of the female teachers, and for general exercises and instruction in music. This edifice, by furnishing the means of relief to apartments now overcrowded, will greatly increase the educational facilities of the University. The annual rental of the furnished rooms in the new building has not yet been fixed by the Regents.

Mrs. D. F. Carson, favorably known as Preceptress in the High School at Beloit, has been elected Preceptress in this College.

The Department of Boarding, both in the South College building and in the new building, will be under the direction of a judicious matron. Board will be furnished at \$3 per week, and no students will be allowed to board themselves in either of these buildings after the next term. Students who wish to board themselves can readily find rooms for their purpose, convenient to the University.

It is designed to give much greater attention to the Fine Arts than they have heretofore received. A thoroughly trained and skillful teacher of music will be employed, and pianos will be furnished at reasonable rates to students desiring to practice. Instruction will also be given in Drawing and Painting. A knowledge of these arts is essential to a complete education, and every necessary effort will be made to furnish the young ladies of this State the means of acquiring a finished culture.

COURSE OF INSTRUCTION.

FRESHMAN YEAR.

College of Letters.

College of Arts.

First Term.

MATHEMATICS, - - - Higher Algebra begun. Loomis.

LATIN—Cicero's Philippic and Verrine Orations.

GREEK—Greek Historians.

OPTIONAL, - - - - Scandinavian.

Second Term.

MATHEMATICS, Algebra completed, Solid Geometry begun. Loomis.

LATIN—Livy.

GREEK—Xenophon's Memcrabilia.

Craik's English of Shakespeare.

FRENCH—Otto's Grammar.

NATURAL PHILOSOPHY—Norton.

Third Term.

MATHEMATICS, Geometry completed, Plane Trigonometry. Loomis. Botany, - Gray's Manual and Lessons.

GREEK—Homer's Iliad. | French—Otto's French Reader. | NATURAL PHILOSOPHY—Norton.

Themes and Declamations throughout the year; also Latin and Greek Composition in College of Letters.

SOPHOMORE YEAR.

First Torm.

MATHEMATICS, Conic Sections and Analytical Geometry. Loomis.

German, - Comfort's Course.

LATIN—Horace. | Science—Agriculture, Lectures.
| Meteorology. Loomis.
| Lectures, - - History of Roman Empire.

Second Term.

Science,

Anatomy and Physiology. Hitchcock.

Zoology begun, Agassiz.

LATIN—Germania and Agricola of MATHEMATICS—Calculus. Loomis.

Tacitus.

GREEK—Prometheus of Æschylus.

LECTURES,

Anatomy and Physiology. Hitchcock.

Zoology begun, Agassiz.

GERMAN—Comfort's Course.

FRENCH—Otto's Reader.

Mediæval History.

College of Letters.

College of Arts.

Third Term.

Mathematics, - · · · · · · · · · · · · · · · · · ·	pherical Trigonometry. Loomis.
LATIN—The Latin Poets.	MATHEMATICS—Surveying, etc.
Greek—Demosthenes de Corona.	Loomis.
REVIEW—Latin and Greek Grammar.	SCIENCE—Zoology completed.
LECTURES—Greek and Roman Liter-	German—Comfort's Course.
ature.	FRENCH—Fleury's Histoirede France
Lectures	Modern History.

Themes and Declamations throughout the year; also Latin and Greek Composition in the College of Letters.

JUNIOR YEAR.

First Term

1

TECHNICAL COURSES.

DEPARTMENT OF AGRICTLTURE.

FIRST YEAR.

First Term.

BOTANY.—Structural Botany, including microscopic examination of tissues and other minute structures. Physiological Botany, including the germination and growth of plants. Systematic Botany, or classification of plants, including a discussion of the general principles of classification in the different departments of Natural History, the limitations of species and origin of varieties, with exercises in Botanical analysis

Second Term.

- PRACTICAL AGRICULTURE.—Location of farm. Division into fields. Arrangement and planning of farm buildings. Farm implements. General principles of tillage. Principles of drainage. Laying out and construction of drains. Methods of seeding. Harvesting of crops.
- METEOROLOGY.—Dews, Frosts Fogs, Clouds, Rain, Hail, Snow, Winds and local causes affecting climate, as proximity to mountain chains, to forests, or to bodies of water. Effect produced by the removal of forests, or by planting screens of timber. Mererological instruments, their methods of use and advantages to the agriculturist.

Third Term.

- PRACTICAL BOTANY.—Botanical characteristics and geographical distribution of the natural orders, with their relative importance. The general and species having agricultural value; those having commercial or medical value; those having ornamental value, and those which are noxious or detrimental—as weeds or poisonous plants.
- HORTICUTURE.—Hot beds, their construction and use. Methods of propagation of plants, by layers, by cuttings, by budding or grafting, etc. Transplanting. Varieties of small fruits and the best means of cultivating them. General management of nurseries. Landscape gardening.

SECOND YEAR.

First Term.

CHEMISTRY.—The forces, Heat, Light, Electricity and Magnetism. Chemical affinity and the laws of chemical combination. The Elements, their history, properties, combinations and uses. Applications of Chemistry to the arts and manufactures. Laboratory practice will be begun as soon as the student has become sufficiently advanced, taking up the special re-action of the elements, and the laws of chemical decomposition and precipitation.

Second Term.

- ZOOLOGY.—Principals of classification. Descriptive Zoology, comprising the systematic arrangement of animals in accordance with their natural affinities, into classes, orders, families, etc. Natural history of domestic animals.
- Organic Chemistry.—Composition of organic bodies and their special characteristics. Chemistry of germination, of nutrition, of vegetable growth, of decomposition of fermentation, of saponification.
- ANALYTICAL CHEMISTRY.—Including general analysis, analysis of Minerals, Blowpipe analysis, analysis of soils, manures and ashes of plants. Volumetric analysis and its applications to acidimetry and alkalimetry.

Third Term.

- PRACTICAL AGRICULTURE.—General principals of Farm Economy. Care and feeding of Stock. Manures, animal, vegetable and mineral, their management and mode of application. Preparation of the soil for particular crops. Cultivation of crops. Management of grass lands. Improvement of soils by physical means, as draining, subsoiling, etc. Conducting experiments. Industrial Statistics.
- ZOOLOGY.—General Physiology, Comparatie Anatomy, and Embryology. Entomology, including classification of insects. Habits of noxious species and best means of checking their ravages. Habits of beneficial species.

THIRD YEAR.

First Torm.

- FORESTRY.—Planting and management of Forest Trees. Soils adapted to their growth. Value of different kinds of trees for fuel, building and other purposes.
- GEOLOGY.—Dynamical and descriptive. Origin of soils. Building materials. Coal and metals.

Second Term.

AGRICULTURAL CHEMISTRY.--Composition of soils. The relations of air and moisture to vegetable growth. Connection of light, heat and electricity with growth of plants. Chemical changes attending vegetable growth. Chemistry of the various processes of the farm, as plowing, following, draining, etc. Preparation, preservation and composition of manures. Artificial manures. Methods of improving soils by chemical means, by mineral manures, by animal manures. Chemical composition of the various crops. Chemistry of the dairy.

Third Term.

Animal Husbandry.—Breeds of domestic animals, their characteristics, and adaptation to particular purposes. Principles of stock breeding. Veterinary surgery and medicine.

HISTORY OF AGRICULTURAL EDUCATION.

Note.—It will be noticed that the same banch sometimes occurs in different parts of the course. In some cases this has been found necessary

in properly arranging the studies into terms. In other cases this necessity arises from the different methods in which the same subject will be discussed; these methods belonging to different departments of instruction, some of them adapted to students in the earlier, and others to those in the later part of the course.

DEPARTMENT OF ENGINEERING.

JUNIOR YEAR.

First Term.

ROADS AND RAILROADS - Gillespie and Lectures.

DESCRIPTIVE GEOMETRY - Church.

CHEMISTRY - - - Lectures.

TOPOGRAPHICAL DRAWING - Elementary Topography.

GEOMETRICAL DRAWING - Orthographic, Spherical, Isometric projections.

ELECTIVE - - - - - Rhetoric, German.

Second Term.

Building Materials - - Mahan and Lectures.
Theoretic Mechanics - Rankine.
Analytical Chemistry - Qualitative.
Topographical Drawing - Maps of Farm, Topographical and Hydrographical Surveys.
Geometrical Drawing - Shades, Shadows, Perspective, Colors.
Elective - - - History, German.

Third Term.

Mahan and Lectures. STRUCTURES Bankine. PRACTICAL MECHANICS Analytical Chemistry Quantitative. White and Lectures. ASTRONOMY TOPOGRAPHICAL DRAWING -Plans, Profiles, Sections of Roads, Railroads, Canals. GEOMETRICAL DRAWING Stereotomy, Structures. ELECTIVE Qualitative Analysis, Constitutional Law, German.

SENIOR YEAR.

First Term.

PRIME MOVERS, - - - Rankine and Lectures.
GEODESY, - - - - Rankine.
MINERALOGY, - - - Determinative.
METALLURGY, - - Lectures.

MINERALOGY, - - - Lectures.

MINERALOGY, - - - - Steam Engine, other Prime Movers, Machines,
Projects.

Projects.

Quantitative Analysis, English Literature,
Science of Language.

Second Term.

- Haupt and Lectures Bridges.

COMBINED STRUCTURES, Rankine.

- - - Lectures - - Lectures, Lectures and Practical Exercises Absaying,

GEOLOGY, - - GEOMETRICAL DRAWING, Bridges, Machines, Projects. Morai Philosophy, Logic.

Third Term.

WATER ENGINEERING, - Bresse and Lectures. RAILROAD ENGINEERING, Scribner and Lectures.

ECONOMICAL GEOLOGY, - Lectures.

GEOMETRICAL DRAWING, - Hydraulic Motors and Works.

GENERAL REVIEW.

Practical exercises, such as field practice, with the use of instruments, laying out railroad curves, preparing projects, with drawings and specifications of machines and structures, etc., continue through the entire course. Theses are required for graduation.

DEPARTMENT OF MINING AND METALLURGY.

The Course of Study in this Department, will be fully arranged at the beginning of the coming Collegiate Year. Instruction will be given in the following subjects:

Descriptive Geometry, Shades, Shadows and Perspective. Mechanics.

Civil Engineering. Mining Engineering.

Drawing. Chemistry.

Qualitative Analysis.

Quantitative Analysis. Blowpipe Analysis.

Determinative Mineralogy.

Assay of Ores. Metallurgy. Geology.

Economic Geology.

LAW DEPARTMENT.

First Term.

JUDGE ORTON, -- Personal Property, Partnership, Corporations,

Contracts of Sale. Criminal Law. Prof. Carpenter,

- Domestic Relations. JUDGE COLE, -

The Constitution and Jurisdiction of Courts. PROF. VILAS, Common Law Pleadings.

Second Term.

The Law Merchant, covering negotiable paper, JUDGE ORTON, suretyship and guaranty. Insurance. Fixtures.

Contracts. Prof. Carpenter, Practice. JUDGE LYON -

Equity Pleading. Pleading under the Code. PROF. VILAS,

Third Term.

JUDGE ORTON, - - - The Law of Real Estate, Uses, Trusts, Powers, and Wills.

PROF. CARPENTER,

JUDGE DIXON,
PROF. VILAS,
Bailment and Agency.

Equity Jurisprudence.

Law of Evidence.

POST GRADUATE COURSE.

SECTION I. NATURAL HISTORY— Botany. Mineralogy. Geology. Mining.

II. CHEMISTRY—

Chemical Philosophy and Physics. Qualitative and Quantitative Analysis. Applied Chemistry.

III. MATHEMATICS—
Pure Mathematics.
Mechanics and Physics.
Astronomy.
Engineering.

FV. PHILOSOPHY AND HISTORY—
History and International Law.
Psychology and History of Philosophy.
History and Criticism of English Literature.

¥. Philology—

Latin and Greek Languages and Literatures. Comparative Philology. Modern European Languages.

GENERAL INFORMATION.

7

POLICY.

It is the aim of the University to meet the educational wants of every student in the State. The courses of study as laid down are intended to be the mere outlines of work. In the optional studies and post graduate course there is provision for all the demands of higher scholarship which are now made upon the Institution. And it is confidently expected that by the sale of lands and in other ways, provision will be made for the constant growth of the University as greater demands are made upon it.

It is advisable that students should pursue the prescribed courses if possible, adding to them as they are able, from the optional studies; but, by special vote of the Regents, the Faculty may excuse a student from any study in either course and substitute for it any other of equal educational value, such action of the Faculty being a matter of record.

The whole policy of the Institution is determined by the Regents who as a body represent the people, and no particular sect or party.

GOVERNMENT.

Students are held responsible only for good order and the diligent use of their time. Those who fail to conform to this simple requirement are at once dismissed. The University is no place for idlers, for disorderly persons or for those who do not propose to give their whole time to the work prescribed for them by the Faculty. The loss of a single recitation not only injures the student, but those connected with him.

Leave of absence will not be granted except in cases of absolute necessity.

Each Faculty has special care of its own College or Department, but all the instructors teach wherever their services are required. Weekly reports are made by each Professor to the Faculty, of the work in his own department and of all cases of delinquency.

The students and Faculty are assembled for prayers daily, fifteen minutes before the morning hour for commencing recitations. At this time all public announcements are made, and the President also gives directions and instruction to the students in regard to all their general duties as members of the University.

No student is required to attend any religious exercises of any kind, but all directions in regard to this matter, given by parents or guardians, will be cheerfully followed.

LECTURES.

In addition to the lectures given in connection with the recitations, some subjects are taught entirely by lectures, the students being required to take notes, and to recite upon the lectures the same as when a text-book is used.

The following are the regular courses of lectures:

To the Senior Class, on Mental and Moral Philosopy, by the President; on Geology and Mining, by Prof. Irving; on English Literature, Logic and Evidences, by Prof. Carpenter; on Astronomy, by Prof. Sterling; on Comparative Philology, by Prof. Feuling; on History of Civilization, by Prof. Allen.

To the JUNIOR CLASS, on Chemistry, Physiology and Comparative Zoology, by Prof. Davies; on History, by Prof. Allen; on Civil Polity and International Law, by Prof. Parkinson; on Mechanics and Physics, by Prof. Sterling, and on Rhetoric and English Composition, by Prof. Carpenter.

To the Sophomore Class, on Structural and Sysematic Botany, by Prof. Davies; on Practical Botany and Agriculture, by Prof. Daniells, and on History by Prof. Allen.

To the Freshman Class, on the Laws of Health and Methods of Study, by the President; on History, by Prof. Allen; and on Natural History in its relations to the Arts, by Prof. Davies.

To Special Students, on Analytical Chemistry, by Prof. Daniells.

In addition to these courses, other Lectures are delivered on Special subjects, by members of the Faculty and other scientific gentlemen.

LIBRARY.

The University Library comprises nearly four thousand volumes.

All the students have access to it free of charge. Valuable additions have been made during the past year.

Students also have opportunity, free of expense, to consult the State Historical and State Libraries, the former numbering thirty five thousand volumes, and the latter comprising a choice collection of miscellaneous works and a very complete Law Library. Each is furnished with commodious rooms kept comfortable at all hours of the day. These are Library privileges unsurpassed in the West, and equalled in very few institutions in the country.

EXAMINATIONS.

At the close of the first and second terms there is a public examination of all the classes of the University in the studies of the term.

During the week preceding the Commencement, the several classes are examined, in presence of a Board of Visitors, in the studies of the year.

Promotion from class to class is made to depend on these examinations.

DEGREES.

Students who complete the course of study prescribed in the College of Letters are entitled to the degree of Bachelor of Arts, and, after the expiration of three years from the time of graduation, upon application to the Faculty, accompanied with evidence of satisfactory proficiency, are recommended to the Regents to receive the degree of Master of Arts.

Students who complete the course of study in the College of Arts, are entitled to the degree of Bachelor of Philosophy, and, after the expiration of three years from the time of graduation, on recommendation of the Faculty to the Regents, as in the case of Master of Arts, receive the degree of Master of Science.

Students who complete the prescribed course of study in the Law Department, upon examination and recommendation of the Law Faculty, are entitled to the degree of Bachelor of Laws.

Students who complete the prescribed course in Civil Engineering, are entitled to the degree of Civil Engineer.

Students who complete the course in Mining and Metallurgy, are entitled to the degree of Mining Engineer.

Students who hold a first grade certificate, approved by the State Superintendent of Common Schools for the State of Wisconsin, and also all graduates of Normal Schools of the State, are, after one year's study under the direction of the Faculty, entitled to appropriate University degrees.

Graduates of the Female College receive the same degrees as graduates of the other colleges for the same course of study.

APPARATUS AND CABINETS.

The University is provided with extensive and valuable Geological and Mineralogical Cabinets and collections in Natural History; also with well selected Philosophical and Chemical Apparatus.

Important additions have been made, the past year, to the means for teaching Chemistry and other Natural Sciences. As funds increase from the sale of lands, constant additions will be made to the Board of Instruction and to the means for teaching the sciences in all their applications to the Arts.

COMMERCIAL EDUCATION.

Arrangements have been made so that students in the University who desire to study any branch taught in the Madison Business College can do so for two-thirds the usual fees.

LITERARY SOCIETIES.

The Literary Societies—Athenæan, Hesperian and Castalian—are sustained with great interest, and furnish valuable aid in the intellectual training of the student. Each has a librury of several hundred volumes. Spacious and commodious rooms have been provided and furnished at the expense of the institution for these societies.

These societies admit to membership only students connected with the regular classes. Another, called the *Philomathean Society*, has been organized for Preparatory and University students.

ROOMS.

Private rooms, under certain restrictions, can be secured by gentlemen on application to the locating officer, at the opening of each term.

No student will be allowed to occupy a room until his bills for the term are settled.

Students from abroad have the preference in the assignment of rooms.

Those in the regular classes are allowed the choice of rooms, and in the order of the classes.

Regular students, in previous occupancy, if on the ground at the opening of the term, are permitted to retain their rooms, unless needed for those in higher classes.

Rooms are furnished, except stoves, at the expense of the students, who should bring their own bedding, towels, etc. Other furniture can be obtained here second-hand, or new, at moderate prices.

Students will not be allowed to board themselves, except in the North Dormitory Building.

Occupants of rooms are held responsible for all damages to the same.

Students not accommodated in the University, and not residing with their parents in Madison, will lodge and board in town, under such regulations as the Faculty may prescribe.

TERMS AND VACATIONS.

The Commencement Anniversary is on the Wednesday preceding the last Tuesday of June, and is followed by a vacation of nine weeks.

There are three terms in each year, and three vacations.

The first term opens on Wednesaday, nine weeks from Commencement, and continues until the Friday preceding the last Thursday in November. The second term commences on the third Wednesday after the close of the preceding term, and continues till the Friday preceding the third Wednesday of March. The third term commences on the second Wednesday after the close of the second term, and continues till the Wednesday preceding the last Tuesday in June.

REPORT OF BOARD OF VISITORS.

To the Board of Regents of the University of Wisconsin:

GENTLEMEN:—The undersigned, members of the Board of Visitors, having attended to the duties assigned us by your honorable body, beg leave to present the following report:

We found the University in a very prosperous condition. The Faculty and Instructors have performed their work with marked ability and faithfulness. They are entitled to your entire confidence and support.

The examinations of the classes evinced thorough instruction and earnest study. The classes of ladies showed a scholarship not inferior in any respect to that of the gentlemen.

The Department of Agriculture is well organized and well conducted. Its results, in time, will prove invaluable to the farmers, fruit growers, and gardeners of the State.

The Department of Military Science promises a happy success.

The Law Department is peculiarly fortunate. In addition to having able and thorough instructors, the students have free access to the State Library, and can frequently witness the proceedings in the several courts held at the Capital of the State. The examination of the class was well sustained. We were impressed with the value of previous scholarship in entering upon professional studies. The tendency to enter the learned professions without thorough preparation should be discouraged. The future bar and bench of our State are largely in the keeping of this Department of the University.

The Preparatory Department has been well taught. The pupils, certainly, give promise of future scholarship and usefulness. The want of academies in the state will necessitate the

continuance of this department ic the present; and hence the importance of its distinct and thorough organization. Its courses of study should be with special reference to the Scientific and Classical Colleges, and it occured to us that the standard of admission should be higher. This might lessen the number of pupils but it would secure better scholarship and an easier discipline. And your committee would earnestly recommend the selection of a Principal of this Department who should give his exclusive attention to its government and instruction. The Department thus organized and under the general supervision of the Government of the University, would, we believe, soon furnish a large number of well prepared students for its colleges.

Your committee would also suggest the propriety of allowing the ladies and gentlemen, pursuing the same studies, to recite in classes together. Accepting the fact that they are to be educated together, we fail to see the necessity of having a distinct department known as the "Female College." Such an arrangement would save the time and strength of the professors, and would doubtless accord with general public sentiment.

The Labaratory of the University is certainly a credit to the State. It is convenient and extensive, and must prove invaluable to the College or Arts. The Cabinet and Library are not all that is desired, but considering the age of the University and all the circumstances of the case, they will compare favorably with those of other similar institutions.

An Astronomical Observatory is a pressing need of the College of Arts, and we feel assured that as soon as the means at your command will justify the outlay, you will provide this as well as some other needed improvements.

We found the buildings and grounds of the University in good condition.

The subject of prizes and scholarships, as affording a stimulus to the students in the prosecution of the higher branches of education, is a matter we earnestly commend to your careful consideration.

The commencement exercises reflected great credit to the graduating classes, the Faculty, and the State. In conclusion, your committee would congratulate your honorable body and the people of our rapidly growing State, on the auspicious beginning of a great and useful enterprise. It cannot be reasonably expected that in a State so new, with all of its institutions in a formative condition, that all the educational results of older and wealthier communities can be immediately realized. But patience, courage and a discriminating liberality, will crown your labors with great success.

Respectfully submitted,

H. C. TILTON, C. H. RICHARDS, WM. TEN BROEK, ED. GRAHAM.

REPORT FROM LAW DEPARTMENT.

To the Hon. Chas. S. Hamilton, President of the Board of Regents of the University of Wisconsin:

I have the honor through you, to report to the honorable the Board of Regents, that the Law Department, during the past year has been very successful and promising.

There have been in all twenty-three students in the class, all but three of whom have passed a most thorough examination in the Supreme Court Room before the Judges and in the presence of the Bar and the Examiners, and acquitted themselves with great credit. The names of such as passed this examination have been reported to the Vice President, with a recommendation to the degree of L.L. B.

The class have had most thorough instruction in all branches of the law, and have studied and labored with great zeal and industry, and give promise of becoming eminent in their profession, and in addition to excellent abilities and attainments, they are all of good habits and of high moral character. His Excellency, Governor Fairchild, has most kindly and considerately furnished the class with a room in the Capitol, for lectures, and the students have been treated kindly by the State Librarian, Prof. Conover, and his excellent assistant, in receiving at all proper times the great advantages of consulting the books in the Law Library.

All the authorities of the State have rendered this department great assistance and encouragement, for which the Class and the Faculty feel grateful.

The students, many of them are poor, and have struggled to attain a legal education to enter at once upon the duties and

compensations of the profession. To those who, for the time, are unable to pay for their tuition, the full benefits of the course have been liberally extended, trusting them to pay when able to do so. None who could pay for their board and support, in the city, have been turned away on account of their inability to pay for their instruction. This course for the present has been deemed to be the better, until the Department shall have become well established and known. This, of course, for the time detracts somewhat from the compensation of the teachers, but in time will have the effect to bring the Department to a sustaining basis.

The prospect for the coming year is flattering, and it is expected a still larger class will avail themselves of the course. The reputation of this Department is daily becoming more extended, and through those who have already graduated it is expected many more will apply from year to year.

During the winter, while the Legislature is in session, it is quite inconvenient for the State to spare a suitable room in the capitol for the class, and it is respectfully suggested that the executive committee should have authority to procure a suitable room in some block around the park for that purpose. The class should be as near the State library as possible, as access to that is one of the chief advantages of the school.

All of which is respectfully submitted.

H. S. ORTON,

Dean of Law Faculty.

Madison, June 20, 1871.

UNIVERSITY FARM.

REPORT BY PROF. W. W. DANIELLS.

To the Hon. CHARLES S. HAMILTON, President of the Board of Regents of the University of Wisconsin:

SIR:—I have the honor to submit herewith the report of experiments upon the University Experimental Farm for the year ending October 31, 1871.

WHEAT.

White Winter, Touzelle Variety.—Seed imported from France, and furnished by the Department of Agriculture at Washington. A large, white, plump grain, weighing sixty-two pounds per bushel. Sample 11. Fifteen quarts (29 lbs.,) were sown Sept. 10, 1870 upon an area of 47.9 square rods. Protected from winds upon the west and north sides by growing timber. Mulched in December with coarse litter at the rate of twenty loads per acre. Harvested July 8, 1871. Drawn July 14. Threshed August 10. *Gross weight, 1,191 pounds. Weight of grain 392 pounds. One bushel weighs 593 pounds. Yield per acre, 23.38 bushels. Per cent. of grain to gross weight, 32.9. One pound seed yields 134 pounds.

This variety was first tried the previous year, upon land but partially protected upon the west side, from the winter winds. It there winter-killed entirely. Upon second trial, in a situation more favorable for protection from cold winds, and, with a more favorable winter, it yields well. The straw appears weak, and

^{*} Taken at the time of drawing from the field.

the grain is darker than the seed sown. The experiment will be continued until its worth as a variety for cultivation is well proven.

Red Bearded Saisette Winter Wheat.—Seed imported from France, and furnished by Department of Agriculture. Sample 12. One bushel weighs 62 pounds. Fifteen quarts (29 lbs.) sown September 10, 1870, upon 47.9 square rods. Protected from winds, and mulched the same as Touzelle variety. Harvest ed July 8, 1871. Drawn July 14. Threshed August 7. Gross weight, 1,287 pounds. Weight of grain, 399 pounds. One bushel weighs 60½ pounds. Yield per acre, twenty-two bushels. Per cent. of grain to gross weight, thirty-one. One pound seed yields 13.7 pounds grain.

Besides repeating the above experiments, several other varieties of winter wheat are now in cultivation. Among these is the "Fultz" wheat, a new and promising variety, originated by Mr. Abram Fultz, of Mifflin county, Pennsylvania, the seed of which has been distributed this year by the Government Department of Agriculture.

The question whether winter wheat may be grown in Wisconsin with profit is still unsettled. The experience of the past year would lead to the belief that it may; but a more rigorous winter, and less favorable spring may bring as strong evidence to prove that the climate is too severe. Mr. A. G. Tuttle, of Baraboo, says that after twenty years' experience, he regards it as sure a crop in the Baraboo valley as is spring wheat. The very fine sample from that vicinity on exhibition at the State Fair this fall, shows at least, that as excellent wheat may be grown there, as can be grown anywhere in the same latitude. The greater value of winter wheat demands for it a thorough trial of all hardy varieties, before deciding that spring wheat alone can be relied upon for a sure crop.

SPRING WHEAT.

To test the comparative values of different amounts of seed to the acre, six plats, each containing one-fourth acre, were sown to mammoth variety April 4. The seed—sample 4—was raised upon University farm in 1870. One bushel weighed sixty and three-fourths pounds. The plats were all adjacent, and cultivation was the same on all.

PLAT 1—Three-fourths bushels to the acre—Harvested July 24. Drawn July 28. Threshed October 26. Weight of straw and grain, 820 pounds. Weight of grain, 263 pounds. One bushel weighs 60 1-3 pounds. Yield per acre, 17½ bushels. Per cent. of grain to weight of straw and grain, 32. One pound of seed yields 23.1 pounds.

PLAT 2—One bushel to the acre—Harvested July 24. Drawn. July 28. Weight of straw and grain, 899 pounds. Threshed October 27. Weight of grain, 297½ pounds. One bushel weighs 60.6 pounds. Yield per acre, 19.83 bushels. Per cent. of grain to weight of straw and grain 33. One pound seed yields 19.59 pounds.

PLAT 3.—One and one-fourth bushels seed to the acre.—Harvested July 24. Drawn July 28. Threshed November 4. Weight of straw and grain, 1,146 pounds. Weight of grain 3324 pounds. One bushel weighs 60 pounds. Yield per acre, 22.18 bushels. Per cent. of grain to weight of straw and grain, 29. One pound seed yields 17.53 pounds.

PLAT 4.—One and one-half bushels seed to the acre.—Harvested July 24. Drawn July 28. Threshed Nov. 1. Weight of straw and grain, 1,340 pounds. Weight of grain, 396½ pounds. One bushel weighs 60.36 pounds. Yield per acre 26.16 bushels. Per cent. of grain to weight of straw and grain, 29. One pound seed yields 17.4 pounds.

PLAT 5.—One and three-fourths bushels seed to the acre.—Harvested July 22. Drawn July 29. Threshed October 31. Weight of straw and grain, 3752 pounds. One bushel weighs sixty pounds. Yield per acre, 242 bushels. Per cent. of grain to gross, 28. One pound seed yields 141.

PLAT 6—Two bushels seed to the acre. Harvested July 22. Drawn July 29. Threshed October 5. Weight of straw and 4—(App.)—Sup. Pub. Ins. (Doc. 12.)

grain, 1,412 pounds. Weight of grain, 455½ pounds. One bushel weighs 60½ pounds. Yield per acre 30½, bushels. Per cent. of grain to weight of straw and grain, 32. One pound seed yields 14.98 pounds.

Table showing the results of experiments with different amounts of seed wheat to the acre.

Bushels of seed to to the acre.	Time of harvesting.	Weight of straw and grain.	Weight of grain.	Yield per acre.	Weight per bushel.	Per cent. of grain to weight of straw and grain.	One pound seed yields.
		lbs.	lbs.	bushels.	<i>l\:</i> s.		lbs.
3/4 1 11/4 11/2 13/4	July 24 July 24 July 24 July 24 July 22 July 22 July 22	820 899 1,146 1,340 1,330 1,412	263 2971/2 3323/4 3961/2 3753/4 4551/4	17.53 19.83 22.18 26.16 24.75 301/3	60.25 60.6 60 60.36 60 60½	32 33 29 29 28 32	23.11 19.59 17.53 17.4 14.1-7 14.98

This table, with the exception of plat five, shows an increase in yield as the amount of seed is increased. The plats upon which these experiments were tried were adjacent, and to all appearance equally fertile. The variation in the yield of plat five, may, doubtless, be attributed to the fact that it was in a more exposed situation, and more badly laid by the wind, for in both four and six, the weight of straw and grain and the weight of grain are greater than in it. The table also shows that the yield of one pound of seed decreases as the amount of seed and yield The increased yield of one seed was plainly per acre increase. visible before the grain was harvested, in the greater amount of "stooling" of that which was thinly seeded. The uniformity in the weight of a bushel of the grain from each plat is quite remarkable, while the variation in the per cent. of grain to the weight of the straw and grain, is such as to show that it does not depend upon the amount of seed. Some English agriculturists claim to get better results upon land in high culture, with

thin, than with thick seeding. So far as we may judge from a single experiment, thick seeding is best upon our lands which are in but an indifferent state of cultivation.

COMPARATIVE VALUE OF DRILLING AND BROADCAST SOWING.

One-half acre was sowed by each method, to Mammoth wheat, weighing 60\frac{3}{4} pounds per bushel, April 13, two bushels to the acre.

1.—Broadcast. Harvested July 24. Weight of straw and grain 1,370 pounds. Threshed Sept. 18. Weight of grain 4824 pounds. One bushel weighs 614 pounds. Yield per acre 16.09 bushels. One pound seed yields 7.94 pounds. Per cent. of grain to weight of straw and grain 35.

This plat was adjacent to a grove, and was very badly injured by blackbirds.

2.—Drilled. Harvested July 24. Threshed Sept. 27. Weight of straw and grain 1,590 pounds. Weight of grain 658½ pounds. One bushel weighs 62½ pounds. Yield per acre 21.95 bushels. Per cent. of grain to weight of straw and grain 41. One pound seed yields 10.97 pounds.

The drill did not distribute the seed evenly. Some portions were too thick and others too thin.

To try the effect of double breaking, one-half acre of heavy blue grass sward was broken with two plows, April 11. The first plow turned a furrow three inches in depth, the second turning a furrow three inches deeper from the bottom of first furrow, entirely out and upon the top of that turned by the first plow. Sowed to two bushels per acre of mammoth wheat, April 13. Harvested July 26. Straw short. Threshed August 2. Weight of straw and grain, 1,054 pounds. Weight of grain, 387½ pounds. One bushel weighs 57½ pounds. Yield per acre, 12.9 bushels. Per cent. of grain to weight of straw and grain, 37. One pound of seed yields 6.4 pounds. This wheat was also partially destroyed by blackbirds.

There have also been in cultivation small samples of the following varieties:

White Australian spring wheat.

Polish wheat.

Calusa club, from Calusa county, California.

Two unnamed California varieties.

The amount of seed of these varieties in our possession was too small to get any accurate results. They will be tried another year with larger amounts of seed.

OATS.

Comparison of different varieties.—Six one-fourth acre plats were sown broadcast, April 18, to three-quarters of a bushel of each of the following varieties:

White Norway.—Weight of one bushel of seed, 33 pounds. Harvested July 20. Weight of straw and grain, 1,106 pounds. Threshed October 14. Weight of grain, 4024 pounds. One bushel weighs 33.49 pounds. Yield per acre, 50.32 bushels. Per cent. of grain to weight of straw and grain, 36. One pound of seed yields 16.27 pounds.

Black or Ramsdell Norway.—Weight of one bushel of seed, 30½ pounds. Harvested July 25. Threshed August 21. Weight of straw and grain, 1,248 pounds. Weight of grain, 522 pounds. Weight of one bushel, 32 pounds. Yield per acre, 65½ bushels. Per cent. of grain to weight of straw and grain, 41.8. One pound of seed yields 22.6 pounds.

Surprise.—Weight of one bushel seed, 32 pounds. Harvested July 17. Threshed September 14. Weight of straw and grain, 1,171 pounds. Weight of grain, 601 pounds. One bushel weighs 38 pounds. Yield per acre, 75 bushels. Per cent. of grain to weight of straw and grain, 51. One pound of seed yields 25 pounds.

Common.— One bushel of seed weighed 30 pounds. Harvested July 25. Threshed July 31. Weight of straw and grain, 1,248 pounds. Weight of grain, 4981 pounds. One bushel

weighs 342 pounds. Yield per acre, 621 bushels. Per cent of grain to weight of straw and grain, 40. One pound of seed yields 22.1 pounds.

Probsteir.—Weight of one bushel of seed, 34½ pounds. Harvested July 25. Threshed September 13. Weight of straw and grain, 1,418 pounds. Weight of grain, 587 pounds. One bushel weighs 37 pounds. Yield per acre, 73½ bushels. Per cent. of grain to weight of straw and grain, 40.7. One pound of seed yields 22.5 pounds.

Potato.—One bushel of seed weighed 29 pounds. Harvested July 26. Threshed September 9. Weight of straw and grain, 1,276 pounds. Weight of grain, 376½ pounds. One bushel weighs 34½ pounds. Yield per acre, 47½ bushels. Per cent. of grain to weight of straw and grain, 29. One pound seed yields 17.3 pounds.

Of the following varieties smaller areas were sown at the same time:

White Schonen.—Seed from Department of Agriculture at Washington. 774 square feet sown with 1 pound 5 ounces of seed. Harvested July 24. Threshed July 29. Weight of straw and grain, 122 pounds. Weight of grain, 442 pounds. One bushel weighs 30½ pounds. Yield per acre, 79.7 bushels. Per cent. of grain to weight of straw and grain, 36.6. One pound of seed yields 34 pounds. The grain was badly lodged, which probably accounts for the light weight.

Brother, of the Western Farmer. 1,078 square feet sown with 17 ounces of seed. Sample 14. Harvested July 24. Badly lodged, and rusted where down. Threshed July 29. Weight of straw and grain, 150 pounds. Weight of grain, 24 pounds. One bushel weighs $40\frac{1}{2}$ pounds. Yield per acre, 30.8 bushels. One pound seed yields 22.6 pounds. Per cent. of grain to weight of straw and grain, 16.

Table showing the result of the experiment with the different varieties of Oats.

DRILLING AND BROADCAST SEEDING.

One-half acre of ground was sowed April 14, to common oats, by each method, giving the following results:

No. 1.—Broadcast.—Harvested July 24. Weight of straw and grain, 1,444 pounds. Weight of grain, 705 pounds. One bushel weighs 34\frac{3}{3} pounds. Yield per acre, 44.06 bushels. One pound seed yields 18.8 pounds. Per cent. of grain to weight of straw and grain, 48.

No. 2.—Drilled.—Harvested July 21. Weight of straw and grain, 1,414 pounds. Weight of grain, 7092 pounds. One bushel weighs 362 pounds. Yield per acre, 44.35 bushels. One pound

seed yields 18.92 pounds. Per cent. of grain to weight of straw and grain, 50.

Table comparing results of broadcast seeding, and drilling oats.

How sowed.	Time of havest-ing.	Weight of Straw and grain	Weight of grain.	Yield per acre.	Weight per bushel.	Per cent. of grain to gross weight.	One pound seed yields.
Broadcast Drilled	July 24 July 21	lbs. 1,444 1,414	lbs. 705 70934	bushels, 44 44.35	lbs. 34% 36¼	48 50	lbs. 18.8 18.92

Both plats were injured by the innumerable hosts of blackbirds that attacked all of our crops.

EXPERIMENT WITH DIFFERENT AMOUNTS OF SEED PER ACRE.

Four adjoining plats of one half acre each were sown broadcast, April 4, to common oats as follows:

No. 1.—One and one half bushels of seed per acre. Harvested July 25. Weight of straw and grain, 1,456 pounds. Weight of grain, 788½ pounds. One bushel weighs 24¾ pounds. Yield per acre, 49.28 bushels. Per cent. of grain to weight of straw and grain, 53. One pound seed yields 35 pounds.

No. 2.—Two bushels of seed per acre.—Harvested July 25. Weight of straw and grain, 1,338 pounds. Weight of grain, 707½ pounds. One bushel weighs 33½ pounds. Yield per acre, 44½ bushels. One pound seed yields 23½ pounds. Per cent. of grain to weight of straw and grain, 52.8.

No. 3.—Two and one half bushels of seed to the acre.—Harvested July 25. Weight of straw and grain, 1,592 pounds. Weight of grain, 709½ pounds. One bushel weighs 32½ pounds. Yield per acre, 44.34 bushels. Per cent. of grain to weight of straw and grain, 44. One pound of seed yields 15½ pounds.

No. 4.—Three bushels of seed to the acre. Harvested July 17. Weight of straw and grain, 1,628 pounds. Weight of

grain, 827% pounds. One bushel weighs 35% pounds. Yield per acre, 51.72 bushels. Per cent. of grain to weight of straw and grain, 50. One pound of seed yields 18.39 pounds.

Table showing results of experiment with different amounts of seed Oats to the acre.

Bushels of seed per scre,	Weight of straw and grain.	Weight of grain.	Tield per acre.	Weight per bushel.	Per cent. of grain to gross weight.	One pound of seed yields.
11 2 21 3	1,456 lbs. 1,338 lbs. 1,592 lbs. 1,628 lbs.	7881 lbs. 7071 lbs. 7091 lbs. 8271 lbs.	49.28 lbs. 44½ lbs. 44½ lbs. 51½ lbs.	341 lbs. 331 lbs. 321 lbs. 351 lbs.	53 52.8 . 44 50	35 lbs 23½ lbs 15½ lbs 18 2-5

The discordant result shown by this experiment is owing to the different conditions of the soil, a part of which had been in cultivation with corn the previous year, and a part with wheat. The experiment shows how difficult it is to get all the conditions of the soil such as to give uniform results, when cultivated by the same method. In order that experiments may be reliable, everything must be uniform, but the one point which the experiment is intended to establish. For example, in the above experiment, the only variable element that should exist is the amount of seed per acre; all other conditions must be the same. It is very difficult to get two adjoining plats that have the same degree of fertility, which necessitates the testing of land to ascertain its comparative fertility before using it for experimental purposes.

The following experiment was tried for the purpose of comparing the value of well cleaned seed with seed as commonly sowed:

One-fourth of an acre of ground was sown to three-fourths bushels by measure of common oats, as taken from the bin, April 22. One bushel of seed weighed 27½ pounds. Harvested July 25. Threshed August 18. Weight of straw and grain, 864 pounds. Weight of grain, 350 pounds. One bushel weighs 33½.

Yield per acre, 43½ bushels. One pound seed yields 17.2 pounds. Per cent. of grain to weight of straw and grain, 40.5.

An equal area was sown at the same time to three-fourths bushels by measure of common oats, well cleaned. One bushel of seed weighed 30 pounds. Harvested July 25. Threshed August 18. Weight of straw and grain, 910 pounds. Weight of grain, 386½ pounds. Weight of one bushel, 35½ pounds. Yield per acre, 48½ bushels. One pound of seed yields 17.1 pounds. Per cent. of grain to weight of straw and grain, 42.4.

The only difference in the cultivation of these two plats, was cleaning the seed of the latter of all chaff and light grain. The effect of cleaning, as shown by this experiment, amounts to 4½ bushels of grain per acre, a measured bushel of which weighs 2 pounds more than that of the uncleaned. Had heavier oats been used, the difference would probably have been less.

A plat of one-fourth of an acre adjoining the above plats, was sown at the same time to three-fourths bushel by measure of a mixture of equal parts of White and Black Norway, Surprise, Potato and common oats, weighing thirty-two pounds per bushel. Harvested Jnly 25. Threshed August 18. Weight of straw and grain, 964 pounds. Weight of grain, 357 pounds. Weight of one bushel, 34½ pounds. Yield per acre, 44.7 bushels. One pound seed yields 14.9 pounds. Per cent of grain to weight of straw and grain, 37.

Table, showing at a glance the results obtained from these experiments:

Kind of Seeds.	Weight of seed per bushel.	Weight of product per bu.	Tield Per Acre.	Yield of one Pound. Seed.	Per cent. of Grain to entire product.
Uncleaned	27¼	331/2	43¾	17 1-5	401/4
	80	351/2	48¼	17 1-10	422-5
	82	341/2	44 7-10	14 9-10	87.

Two adjoining plats of equal area were sown at the same time

with seed of the same variety. Upon one of these plats well rotted muck was spread as uniformly as possible, to the depth of half an inch. The other had no fertilizer applied. The yield of these plats was as follows:

•	Yield per Acre.	Weight of Product per bu.	Yield of 1 lb. Seed.
No. 1 with muck	52 bu.	35 % lbs.	19.4 lb
	49.4	34 ¼ lbs.	18.4 lb

Giving a yield of 2.1 bushels per acre of heavier grain to the fertilized plat.

BARLEY.

Chevalier.—One half acre sowed broadcast, April 18, to one-one-half bushels, which weighed 46 pounds per bushel. Harvest-ed July 28. Weight of straw and grain, 3,559 pounds. Weight of grain, 1,043 pounds. One bushel weighed 48.63 pounds. Yield per acre, 43.45 bushels. Per cent. of grain to weight of straw and grain, 29. One pound seed yields 15.1 pounds.

Probsteir.—Seed from Department of Agriculture at Washington. Two pounds and 11 ounces sowed April 18, upon 1,375 square feet of ground. Harvested July 24. Weight of straw and grain, 334 pounds. Weight of grain 76½ pounds. One bushel weighs 48½ pounds. Yield per acre, 51.4 bushels. One pound seed yields 28.4 pounds. Per cent. of grain to weight of straw and grain, 23.

Saxonian.—Seed from Department of Agriculture at Washington; 2 pounds and 10 ounces sowed April 18, upon 1,651 square feet. Harvested July 24. Weight of straw and grain, 285 pounds. Weight of grain, 78½ pounds. One bashel weighs 47½ pounds. Yield per acre, 45.9 bushels. One pound seed yields 29.9 pounds.

These varieties of two-rowed barley, were imported from Europe by the Government Department of Agriculture, on account

of their valuable malting properties. They promise to be valuable varieties for general cultivation, although further trial is needed to fully prove their value. The quantity of seed at our disposal of Probstier and Saxonian varieties, was too small for an accurate test-experiment of their yield. The amount of seed that we now have, will enable us to obtain more definite results another year.

CORN.

COMPARISON OF DIFFERENT VARIETIES.

The following table gives the results of an experiment with five varieties that were planted May 12; distance apart, 3½ feet by 3½ feet, three grains to the hill. Cultivation the same with all varieties. Of the White Australian, about one dozen hills were accidently destroyed in July:

VARIETY.	First ripe ears.	Time of harvesting.	Yield per acre.	Per cent of ears to gross weight.
Early Dent Dutton Sanford Cherokee White Australian	Aug. 5 Aug. 11 Sept. 5 Aug. 28 Aug. 17	Aug. 25 Aug. 25 Sept. 5 Sept. 5	49.58 bu 47.12 bu 45.69 bu 56.58 bu 72.49 bu	43 33 22 32 42

The yield per acre is given in bushels of ears weighing 75 pounds each, and was taken as the corn was drawn from the field. The White Australian corn is a new variety not yet introduced into general cultivation. The following quotation pertaining to its history, is from the Transactions of the Colorado Agricultural Society for 1868:

"The White Australian Corn is a new variety of flint corn, brought to this Territory from Salt Lake about two years since. We are told it came originally from Australia, * * * and is said to be peculiarly adapted to high, dry climates."

Seed was obtained of the Secretary of the Colorado Agricultural Society and taken to Northern Illinois in 1870, where it ripened in 96 days. It yields abundantly, as will be seen by the above experiments. It has the appearance of being a new variety, as its characteristics seem to be hardly fixed, a part of it being eight rowed, and a part 12 rowed. It is a very soft corn, the kernels crushing more easily than the common yellow dent. My impressions of it after a single years' trial, are very favorable.

The Cherokee corn also promises well, although the past year's experience proves much less for it than was claimed by its more ardent admirers. But I believe it to be a valuable addition to the list of varieties that are worthy of cultivation.

The following varieties were planted May 16, three grains to the hill; distance apart four feet by four feet:

Variety.	First ripe ears.	Time of harvesting.	Days from planting to ripeneng.	Yiold acre.
White Australian Dutton Sanford Blue Australian Pearl Pop Corn Early Yellow Pop Corn Joint Pop Corn	Aug. 14 Sept. 7 Aug. 22	Aug. 31 Aug. 26 Sept. 27 Aug. 27 Sept. 15 July 15 Sept. 15	107 102 134 103 122 60 122	bush. 44 31.53 32.23 36.43 37.32 9.24 14.62

The smaller yield of White Australian, Dutton and Sanford varieties, in this than in the preceding experiment, is owing partly to the greater distance apart, and partly to the situation, which, in this, was a steep northern exposure, and in the preceding was southern.

"Blue" Australian is the product of blueish kernels that were selected from White Australian.

In all of these experiments, a bushel is taken as 75 pounds at the time of drawing from the field. The moisture and weight of cobs being estimated at 15 pounds. The amount of shrinkage that corn will undergo, will depend greatly upon the season, and will be much less in as dry a year as the past, than in a wet year.

To ascertain the actual amount of shrinkage, 100 pounds (as weighed when drawn from the field,) of several of the above varieties, have been stored away. When they are thoroughly dry they will be again weighed, then shelled and the weight of shelled corn taken as the true per cent. of corn for the past year. A repetition of this experiment for several years will give the average per cent. of shelled corn to corn in the ear, as weighed at the time of husking.

INFLUENCE OF TIME OF SAVING SEED.

This experiment began in 1869, by selecting the earliest ripening ears from a field of Dutton corn, and at the time of husking, selecting other seed in the ordinary manner of saving seed corn. Adjacent plats were planted in 1870 with seed saved by each method, and seed again saved as before, from the product of seed saved by the same method. This seed of the second year was planted in two adjacent plats, May 6, 1870, distance apart three by four feet, three grains to a hill, giving the following results:

FROM SEED SAVED.	Time of ripening.	Yield per acre.
At time of husking	Aug. 14 Aug. 10	12.54 bu. 37.51 bu.

There is here a difference of four days in the time of ripening, in favor of the seed of first ripe ears, but a difference in the yield of five bushels per acre in favor of the product of later ripening ears. The general appearance of the latter was also better.

EXPERIMENTS WITH EQUAL AMOUNTS OF SEED AT DIFFERENT DISTANCES APART.

Equal areas were planted April 28, to Sanford corn, as follows:

Plat 1hill	ls 13 inches apart	1 grain to	the hill.
Plat 2hill	s 26 inches apart	2 grains to	the hill.
Plat 3hill	s 52 inches apart	4 grains to	the hill.

The rows were four feet apart, and cultivation the same with all. The corn was ripe August 26, and gave the following yield per acre:

Plat 1	48.27	bushels.
Plat 2	45.00	bushels.
Plat 3		

The cost of cultivation of numbers 1 and 2 would be more than that of number 4, as more of it must be done by hand, while the yield is greatly in favor of a less distance between the hills, and fewer stalks in a hill.

SEED FROM TIPS, MIDDLE AND BUTTS OF EARS.

Three plats of equal area were planted May 6, respectively from seed grown in same manner in 1870. Distance apart 3x4 feet; three grains to the hill, of New England variety. Cultivation uniform in each.

The results are shown in the following table:

Seed from	Time of ripening.	Yield per acre.	Aver, length of 25 kingest ears.	Average Cir. cumference at butts of 25 largest ears.
Butts	Aug. 21	62.66 bu 60.95 bu 58.11 ba	9 inch. 9.1 inch. 9.2 inch.	61 inch. 6 inch. 5.9 inch.

No difference was visible in time of ripening, but in the yield a perceptible difference was shown in favor of seed from the butts of the ear. The length of twenty-five of the longest ears, and the circumference at the butts of twenty-five of the largest ears from each of the three plats, were taken. The results of these measurements are quite curious, indicating that the average length of the ears was greatest in that raised from seed from the tips, while the average size around the butts was greatest in the product of seed from the butts of the ear. In each case, as well as in the yield per acre, the product of seed from the middle of the ear was nearly a mean between the other two. The ends of

the ears were so badly eaten by blackbirds that it was impossible to tell whether the ears from either of these plats were filled out better than from the others. This trial indicates that in the second year of the experiment, there is already a difference in the yield per acre, and an appreciable tendency to change the form of the ear, in the product of seed taken from different parts of the ear. The tendency to change seems to be sudden, and gives an interest to the experiment that will make it well worthy of several years' further trial.

POTATOES.

The following varieties have been in cultivation for the purpose of comparison. Planted May 8 in rows 3½ feet apart. Cultivation uniform.

Variety.	Dist. apart in rows.	Time of ripening.	Yield per acre in bushels.	Size, etc.
Early Goodrich Seedling from Early Goodrich Early Rose Bresee's King of the Earlies Excelsior. Vandervere. Titicaca Philbrick's Early White. Andes. Santo Domingo		Sep. 1 Aug. 18	147 ⁵ / ₈ 344.38	Large, smooth Small, rough.

The last two varieties were cultivated under the above names, the past year, the true names having been lost.

The distance apart in the row was varied to correspond as nearly as possible with the known habits of growth of the several varieties. Those with small tops that grow compact in the hill, like the Early Rose being planted near together, while those with with large tops, as the Peachblow, were planted farther apart.

The Colorado potato beetles were more troublesome early in the season than ever before. The remedy that proves most successful with us, has been hand-picking. With constant attention the potatoes upon the University Farm have been injured very little, if any, although there were several gardens in the vicinity where no measures were taken to destroy them.

We did not use Paris Green, the only common remedy used, for the reasons given in my repert last year, that it is a poison, and should not be put upon the soil.

Many of the above varieties of potatoes are quite new, or at least little known among farmers.

The "Peerless" and "Bresee's King of the Earlies," are two varieties that were sold last spring at very high prices. The former bids fair to be a valuable late potato and a good yielder.

The King of the Earlies is no earlier than the Early Rose, but is of good quality, prolific, and doubtless will prove a valuable addition to the list of early potatoes. The "White Rose" will probably prove a good late variety, but instead of being "bug-proof," as advertised, is as liable to attack by the potato beetle, as the Early Rose. The general value of the different varieties may be told by the remarks on size and appearance above.

IMPROVEMENT OF SOILS BY MECHANICAL MEANS.

For the purpose of testing the comparative value of different depths of plowing, an experiment has been begun upon four plats of an acre each, to be cultivated through several years as follows:

- No. 1 to be plowed to the depth of five inches only.
- No. 2 to be plowed to the depth of twelve inches.
- No. 3 to be plowed twenty inches in depth, by trench-plowing.

No. 4 to be plowed twenty inches in depth, by subsoiling.

In all respects other than those named, the cultivation is to be uniform on all.

Nos. 1 and 2 were cultivated the past summer in the prescribed manner.

No. 3 was plowed to the depth of twelve inches only.

No. 4 was plowed twelve inches in depth, and subsoiled four inches deeper.

The four plats were planted May 15th to Early Yellow Dent Corn, four feet apart each way, three grains to the hill.

The following table shows the results of the first year's trial:

Plat 1 yields		55.4 bushels.
Plat 2 yields		50.65 bushels.
Plat 2 yields		44.95 bushels.
Plat 4 yields	• • • • • • • • • • • • • • • • • • • •	42.21 bushels.

The yield diminishes from one to four, a result that cannot be attributed entirely to the method of cultivation, as for want of a suitable trench plow it was found impossible to plow No. 3 more than twelve inches in depth, so that in all respects the cultivation of Nos. 2 and 3 have been the same, and the plats are adjacent. Plats 3 and 4 will be deepened as fast as is practicable.

I would acknowledge my indebtedness to Mr. H. H. McAfee, Farm Superintendent, for the careful and skillful manner in which he has attended to the carrying on of these experiments, even to the most minute particular. I have also obtained from Mr. McAfee the following particulars:

The average yield per acre of the different crops upon the University Farm has been as follows:

Winter wheat	22 1-2 22	bushels.
Oats	50 9-10	bushels.
Barley	43 1-3	bushels.
Navy beans		

Under Mr. McAfee's care, the garden formerly under the charge 5—(App.) STP. PUB. INS. (Doc. 12.)

of the State Horticultural Society, has been moved to the garden near the Farm-house, and is now in a thriving condition.

There have been in cultivation the following vegetables, the seeds of which were furnished by the Department of Agriculture, at Washington, and which promise to be valuable varieties:

Beck's Prizetaker Pea.

Carter's Firstcrop Pea.

Prince Albert Pea.

Danvers Yellow Onion.

Knowles' Improved Imperial Sugar Beet.

Demar's Fine Dark Red Beet.

Deming's Early Beet.

Deep Blood-red Beet.

Long Orange Belgian Carrot.

Carter's Champion Orange Globe Mangel Wurtzel.

Dark Red Egyptian Beet.

Lenormand Cauliflower.

Schweinfurt Cabbage.

Seeley's Leviathan Celery.

And a large collection of flower seeds, some of the varieties of which are very valuable.

The Department of Agriculture of the University, has received during the year, the following donations:

From Moses H. Hussey, North Berwick, Me.—

1 paper Trophy Tomato seed.

From Hon. David Atwood, M. C .-

1 paper Opium Poppy seed.

4 papers Havana Tobacco seed.

1 paper Connecticut Seed Leaf Tobacco seed.

From Hon. J. C. Cover, U. S. Consul at Azores Islands, numerous varieties of flower seeds, most of which failed to germinate.

From Messrs. Morrow & Brother of the Western Farmer,
Madison—

1 quart Bohemian Oats.

1 sample Polish Wheat.

1 pound White Rose Potatoes.

1 quart Cherokee Corn.

From H. H. McAfee, Esq.—

4 quarts White Australian Corn.

From Hon. R. B. Sanderson-

1 package White Australian Spring Wheat.

From Department of Agriculture, Washington--

Numerous varieties of Flower seeds.

Numerous varieties of Vegetable seeds.

14 bushels Fultz Winter Wheat.

From G. P. Peffer, Esq., Pewaukee, Wis.-

1 Apple-tree, a graft from the Pewaukee seedling, originated by himself.

Several fine fossil-casts of Pentamerus Oblongus.

From Geo. Wolf, Esq., Germantown, Wis.—3 quarts Russian Wheat.

METEOROLOGY.

A copy of the Meteorological observations, for the year ending October 31, taken at the University, will be found accompanying this report.

CASUAL PHENOMENA.

The following are some of the most important observations of casual phenomena:

November 24 to 30. Indian summer; very warm.

December 22. Lake Monona frozen over.

December 24. Lake Mendota frozen over.

But four inches of snow during December. Thermometer 13° below zero on the morning of the 24th, the lowest temperature of the winter.

January, mild and uniform; twenty inches of snow during the month.

March 2, 2 A. M. Violent thunder and lightning, accompanied with sleet and hail.

April 1. Lake Monona free from ice.

April 2. Lake Mendota free from ice.

The opening of these lakes is twelve days earlier than in 1870.

April 30. Plum and cherry trees beginning to bloom.

Frost, morning of May 10.

First frost on morning of September 21, partially killing tomato and melon vines.

Mornings of September 28 and 29, harder frosts, destroying most of the tender vegetation.

October 31, first snow.

OBSERVATIONS.

The system adopted is that of the Smithsonian Institution, the hours of observation being 7 A. M., 2 P. M., and 9 P. M.

The temperature is given in degrees and tenths, F.

The amount of cloudiness is expressed by a number indicating the tenths of the sky overcast. The following abbreviations are used:

St.—Stratus.

Cu.—Cumulus.

Cir.—Cirrus.

Nim.—Nimbus.

Cu.-St.—Cumulo-stratus.

Cir.-St.—Cirro-stratus.

Cir.-Cu—Cirro-cumulus.

The direction of the wind is taken for eight points of the compass, the figures accompanying represent the force on a scale from 1, a very light breeze, to 10, a most violent hurricane. In the

summary of observations, the percentage of winds from each direction is given for each month, and for the entire year.

The height of the barometer is indicated by inches and decimals, and corrected for the expansion above 32°.

The "force or pressure of vapor" expresses the weight of moisture in the air, by indicating in inches the height of a column of mercury that is sustained by it.

"Relative humidity" shows the per cent. of complete saturation existing at the time when the observation is made.

> Latitude 43°, 5′ N. Longitude 12°, 24′ W. Height above the sea, 1,088 feet.

Maximum observed temperature for the year, 91°. Minimum observed temperature for the year, 13°. Range of observed temperature for the year, 104°.

W. W. DANIELLS, Prof. of Agriculture and Analytical Chemistry.

HENRY BÆTZ, State Treasurer,

Ex-officio Treasurer of the University.

SECRETARY'S REPORT.

Madison, November 1, 1871.

GEN. C. S. Hamilton, President of the Regents of the University of Wisconsin:

Sir: I have the honor to submit the following statement of the financial condition of the State University, exhibiting the amount of productive funds on hand, and also the receipts and disbursements of the income of the several funds for the year ending September 30, 1871.

UNIVERSITY FUND.

This fund consists of the proceeds of the sales of land granted by Congress for the support of the University.

RECEIPTS.			
Sales of land	\$8 18	22	
Dues on certificates	2,651		
Penalties		80	
Taxes	_	20	
Loans	1		
Transferred from School Fund	. 59	40	
	\$4,015	38	
DISBURSEMENTS.	1		Ì
Loans		• • • •	\$4,650 00 502 75
	\$4,015	38	\$5,152 75
Balance September 30, 1870	1 935	97	₩0,102 10
Balance September 80, 1871		• • • •	798 60
	\$5,951	85	\$5,951 35

The amount of this fund which was productive on the 30th days of September, 1870 and 1871, respectively, was as follows:

	1870.	1871.
Amount due on certificates of sale Amount due on mortgages Certificates of indebtedness Dane county bonds	6,792 00	\$66, 107 38 11,032 00 111,000 00 19,000 00
Total productive fund	\$203,866 14	\$207,139 38

Showing an increase in the productive fund during the last year of \$3,273.24.

AGRICULTURAL COLLEGE FUND.

This fund consists of the proceeds of the sales of 240,000 acres of lands granted by Congress to the State for the support of an institution of learning where shall be taught the principles of agriculture and the arts. The interest on the productive fund forms the income.

RECEIPTS.		
Sales of land Dues on certificates Penalties Loans Transfer from Agricultural College Fund Income.	958 00 892 43 100 00	
DISBURSEMENTS.	\$ 9,175 50	
Loans		\$8,625 00 4,175 00 76 69
Balance September 30, 1870	\$9,175 50 8,923 07	\$7,876 69 10,221 88
	\$18,098 57	\$18,098 57

The amount of this fund which was productive on the 30th days of September, 1870 and 1871, respectively, was as follows:

	1870.	1871.
Dues on certificates of sale. Dues on mortgages. Certificates of indebtedness. Dane county bonds. United States bonds.	6,100 00 33,600 00 6,000 00	
	\$ 159,846 20	\$182,970 20

Showing an increase in the productive fund during the last year of \$23,624.00.

FEMALE COLLEGE FUND.

This fund consists of an appropriation made by chapter 54, general laws of 1870, amounting to \$50,000, for the purpose of building an additional university edifice. By the terms of the act, \$10,000 of the sum appropriated was to be placed at the disposal of the Regents on the first day of May, 1870, and the remainder on the first day of May, 1871.

Plans and specifications for a new building, to be occupied by the Female Department of the University, were prepared, and advertisements "for proposals" to build said building were published in a newspaper in five of the principal cities of the state. The contract was awarded to Hon. John Fellenz, of Milwaukee, on the 21st day of July, 1870, and the building will be completed and ready for occupancy at the commencement of the winter term in December next.

RECEIPTS.	A FO 000

Very respectfully,

Your obedient servant,

JOHN S. DEAN, Secretary of Regents of the University.

NORMAL SCHOOLS.

I.—REPORT OF THE PRESIDENT OF THE BOARD OF REGENTS OF NORMAL SCHOOLS.

Hon. Samuel Fallows,

Superintendent of Public Instruction:

SIR: In accordance with the requirements of law, I have the honor to submit the following report of the doings of the Board of Regents of Normal Schools, of their receipts and expenditures, and of the prospect, progress and condition of the Normal Schools, for the year ending August 31, 1871.

At a special meeting of the Board, held at Madison on the 24th of January, 1871, the President made a verbal report in behalf of the committee on employment of teachers, in reference to the faculties of Whitewater and Platteville schools.

The President read a communication from President Charlton, relative to the wants of the Platteville school. Said communication was referred to a special committee of three, consisting of regents Weld, Robbins and Whitford. The report of this committee, as amended, appropriating \$300 for fitting up a room in the Platteville Normal School building, for preserving and classifying minerals and other substances illustrating the natural sciences; \$300, for replenishing the text-book library; \$200, for purchasing recitation seats; and \$1,000 for procuring apparatus, was adopted. Three hundred dollars was appropriated to defray

the expenses of the executive committee for the balance of the year.

The executive committee were authorized to pay C. A. Buttles \$500, being the balance on his contract for heating apparatus for Oshkosh Normal School, provided the guaranty given by said Buttles in his contract with the Board, remain in full force, and that his bill, presented for extras, be not allowed. Mr. Buttles was paid February 7, 1871.

It was provided that all applications for positions in any of the Normal Schools shall be referred to the committee on Employment of Teachers, to be reported by them to the Board, and that hereafter all teachers employed in the normal schools be chosen by the Board at regular or special meetings, by ballot, and that the committee on Employment of Teachers be authorized to fill vacancies in the intervals of the sessions of the Board.

Regent Gary was authorized to procure fuel for Oshkosh Normal School, and to audit, upon the approval of the President, bills for the same.

Regent Gary of the committee on opening the Oshkosh Normal School, offered the following resolution, which was adopted:

"Resolved, That the Normal School at Oshkosh be opened as early as possible in September next, and that the executive committee be authorized to build the walks, to erect the out-buildings and to purchase the furniture necessary to put the school in operation; and also to purchase text and reference books to an amount not exceeding \$1,000; and apparatus to an amount not exceeding \$1,000; and that the said committee be authorized to audit the accounts for the purchases made and expenses incurred in so doing."

President Starr, as chairman of the committee on Employment of Teachers, made a report in relation to the Presidency of the Oskosh Normal School; the report was recommitted to the committee with instructions to conduct such further correspondence and inquiry upon the subject as seemed necessary.

The executive committee was authorized to audit and pay the

necessary expenses of the committee on employment of teachers, incurred in securing teachers for the normal schools.

An additional sum of \$1,000 was appropriated for institute work for the balance of the year.

The President was instructed to give notice of the probable location of a normal school in the present sixth congressional district, that propositions for the establishment of such a school would be received by the Board, and that a committee would probably visit proposed locations in the spring or early summer of this year; in accordance with which instruction the following notice was published in the State Journal, of Madison, and a copy thereof sent to each newspaper published in the sixth congressional district:

"Normal School in the Sixth District.—The policy of the Board of regents of normal schools is, within two or three years, as soon as the income fund will warrant, to locate a normal school at some point within the limits of the present sixth congressional district; and in view of that purpose, propositions will be received by the Board from such localities as may be thought suitable for the establishment of such a school, and whose inhabitants desire it.

"A committee of the Board will probably visit proposed localities during the spring or early in the summer of the present year.

"The attention of the newspapers in the sixth congressional district is invited to this notice, with the request that the subject may be fully canvassed in that section of the state, that the people may have opportunity to make known to the Board their wishes and opinions in this matter.

"All propositions and communications for the committee and for the Board may be addressed to the undersigned at Ripon, Wis.

"WILLIAM STARR,

"President Board Regents Normal Schools."

The Board held a special session at Platteville, June 6, 1871, at which the president made a report in behalf of the committee

on employment of teachers and relative to the presidency of the Oshkosh Normal School.

G. S. Albee was elected President of the Oshkosh Normal School.

A resolution fixing the salaries of the president and teachers of the Oshkosh Normal School at amounts not exceeding those paid to teachers in similar positions in the Platteville and Whitewater Normal Schools was adopted.

The salary of the janitor of the Platteville school was fixed at \$45 per month.

\$1,000 was appropriated for purchasing apparatus for the Whitewater School.

The president of the Board in connection with the presidents of the different Normal Schools was authorized to order the printing of not more than fifteen hundred copies of the catalogue of each institution.

The president was authorized to insert suitable advertisements of the different Normal Schools in the "Wisconsin Journal of Education."

The annual meeting of the Board was held at Madison, July 12, 1871.

A proposition from the common council of Janesville, tendering to the Board the Janesville high school building and grounds for a normal school, was submitted and placed on file.

The faculties of the several normal schools of the :tate, with President Phelps, of the Winona, Minnesota normal school, and Professor Allen, of the Mansfield, Pennsylvania normal school, met the Board, and a very interesting and profitable interchange of views respecting normal school work was had.

R. Graham, D. E. Holmes and Mrs. M. E. Holmes were elected teachers in Oshkosh normal school. Miss Ruth R. Burritt was elected teacher in Whitewater Normal School.

The committee on Course of Study and Text Books were instructed, with the advice and assistance of the Presidents of the several normal schools, to arrange for an institute course for each school, this course to include an institute of not more than six weeks at the opening of the first term of each school year, open

to all who may purpose to engage in teaching, and a course of study, which, together with the time occupied in the Institute, shall not require to exceed one year to complete. A certificate of attendance and competency to be given those who complete the course, and who, upon examination, are found competent.

Prof. Charles H. Allen was elected agent of the Board for conducting Institutes the ensuing year, and his salary fixed at \$2,000 per annum, and traveling expenses.

The following resolution was adopted:

"Resolved, That no student of our Normal Schools shall be transferred from one institution to another, only on the written permission of the president of the school where he has been in attendance."

The following named persons were, by ballot, elected officers of the Board for the ensuing year:

President—WILLIAM STARR.

Vice President—HANMER ROBBINS.

Secretary—Samuel Fallows.

Five hundred dollars were appropriated to defray the expenses of the Board in visiting the proposed sites for a Normal School in the sixth congressional district, and the President was authorized to draw the same and pay the expenses of the members of the Board, upon vouchers furnished by them.

It had been the purpose of the Board, as indicated by their action in January last, and the notice issued in accordance therewith, in the spring or early summer to send a committee of their number to visit and examine such localities in the 6th congressional district as desired and proposed the establishment of a normal school; but on a more full consultation, and in accordance with the expressed wishes of citizens of that district, the Board decided to make personal examination by all its members, as far as practicable, of the proposed localities, their advantages, their educational condition and needs, their accessibilities, lines of communication present and prospective, their facilities for economical and durable buildings, and for cheap and comfortable

sustenance of the faculty and students of the school; and in short to enable each member of the Board to become as fully acquainted as a committee might, with all the questions and reasons which should influence in making so important a decision as the location of a normal school in so large an extent of territory, where the difficulty is not, to find a place which needs, and will foster and cherish such an institution, but to decide among many needing, desiring, worthy of, and suitable for it.

It is believed that the policy of the Board in making this personal examination was wise, and that the expenditure incurred was a judicious economy, and that in no other way could the Board have been so intelligently fitted to decide this question of location, when it may come before us.

During this trip, which was delayed till after our annual meeting, the Board convened at River Falls, July 26, on call of the President, at which session a professorship of theory and art of teaching, in each Normal school, was established, and the salary fixed at \$1,800 per annum.

Two hundred and fifty dollars was appropriated for purchasing geological and other specimens for Platteville Normal School, such specimens to be purchased under direction of Prof. Beck.

By resolution of the Board, the President was made ex officion chairman of the executive committee, the committee on employment of teachers and the committee on supplies; the committee on supplies to consist of four members.

The President was authorized to procure insurance on Oshkosh Normal School building for \$35,000 for five years, and the President and Secretary authorized to audit bills therefor.

A sum not to exceed \$3,000, was appropriated for institute work for the ensuing year.

The President announced the following standing committees for the ensuing year:

Committee on Finance — Regents Fairchild, Lyndes and Whitford.

Committee on Employment of Teachers—President, and Regents Weld and Robbins.

Committee on Course of Study and Text Books—Regents Weld, Whitford and Gary.

Committee on Supplies—President, and Regents Robbins, Weeks and Gary.

Committee on Institutes—Regents Fallows, Chandler and Smith.

Executive Committee—President, and Regents Chandler and Gary.

The Board elected, by ballot, R. Graham to the professorship of theory and art of teaching in the Oshkosh normal school, and T. C. Chamberlin to a similar position in the Whitewater school.

The Board met at Madison, August 30th, 1871.

The following resolution relating to the resignation of Prof. R. Graham was unanimously adopted:

WHEREAS, Prof. R. Graham, having been elected professor of the theory and art of teaching in the Oshkosh Normal School, has resigned his position as agent of the Board; therefore,

Resolved, 1st. That we recognize with pleasure the faithful and laborious services in the institute work rendered by Prof. Graham for the Board, and the signal benefits resulting therefrom to the common schools of the state.

Resolved, 2d. That our best wishes go with him in his new and important field of labor.

The following are the regulations for admission to the Normal Schools:

(When more than six applications are made from any one assembly district, the president and secretary are authorized to assign the excess to any unrepresented district; that no student shall be excluded so long as there shall be a vacant seat.)

REGULATIONS FOR ADMISSION.

1. Each assembly district in the State shall be entitled to six representatives in the Normal Schools, and in case vacancies exist in the representation to which any assembly district is enti-

tled, such vacancies may be filled by the president and secretary of the Board of Regents.

- 2. Candidates for admission shall be nominated by the county superintendent of the county (or if the county superintendent has not jurisdiction, then the nomination shall be made by the city superintendent of the city,) in which such candidates may reside, and they shall be at least sixteen years of age, of sound bodily health and of good moral character. Each person so nominated shall receive a certificate setting forth his name, age, health and character, and a duplicate of such certificate shall be immediately sent by mail, by the superintendent, to the secretary of the board.
- 3. Upon presentation of such certificate to the Principal of a State Normal School, the candidate shall be examined, under the direction of said Principal, in the branches required by law for a third grade certificate, except history, and theory and practice of teaching, and if found qualified to enter the Normal School in respect to learning, he may be admitted, after furnishing such evidence as the Principal may require, of good health and good moral character, and after subscribing to the following declaration:
- I, ————, do hereby declare that my purpose in entering this State Normal School is to fit myself for the profession of teaching, and that it is my intention to engage in teaching in the public schools of this State.
- 4. No person shall be entitled to a diploma, who has not been a member of the school in which such diploma is granted, at least one year, nor who is less than nineteen years of age; but a certificate of attendance may be granted by the Principal of a Normal School to any person who shall have been a member of such school for one term, provided that in his judgment such certificate is deserved.

The following is a brief synopsis of the condition of the Normal School Fund, the Income Fund, and the several building funds, at the close of the fiscal year ending September 30, 1871, as appears from the books of the state treasurer and secretary of state:

NORMAL SCHOOL FUND.

For the present Faculty, the number and classification of students, the number, names, location and occupation of graduates, course of study and methods, and the prospect, progress and condition of each Normal School, reference is made to the report of the committee appointed by the Board to visit the schools, and assist in conducting the examinations, accompanying this Report, (and also to be published in catalogue,) and to the report of the President of each school, which by law they are required to make to you; but which it seems more fitting that the law should require to be made to the Board or to its President, to be by him transmitted to you as a supplemental part of the Report required by law of him.

The building at Oshkosh is being made ready for occupancy, and the school will be opened early in September.*

Appropriations, as liberal as our funds will permit, have been made by the Board to provide the several schools with more efficient apparatus and cabinets for illustrating the natural sciences, and with additions to their reference libraries.

In addition to the Normal Institues provided by chapter 18, general laws of 1871, and the ordinary institute work of the Teachers' Institutes, so called, provision has been made by the Board for an institute course of six weeks in all the schools, to be held early in the autumn, when most of our common schools *The school was opened Sept. 19, 1871.

are in vacation; open to all who may purpose to engage in teaching, supplemented by a short course of study of one year's duration, including the institute course.

It is hoped that these provisions will induce and enable all who teach, or purpose teaching in our common district schools, and who may not be able to spare the time and means to take a full and thorough course in our Normal Schools, to attend at least the "Institute Course" in some one of them; and it is hoped, in this way, not only to benefit the great mass of teachers, and through them the great majority of our common district schools, but to give the teachers such a taste of and for professional training and culture, as shall lead them to love their profession, and to thoroughly fit themselves for a pleasant and faithful discharge of their duties in training and educating those upon whose intelligence, culture and worth the prosperity and perpetuity of our civilization and national existence must rest, when their voices along with ours shall come only from the land of silence.

WM. STARR,

President of the Board of Regents of Normal Schools.

II.—REPORT OF THE VISITING COMMITTEE OF THE BOARD OF REGENTS.

To Hon. Wm. STARR,

President of the Board of Regents of Normal Schools:

Sin:—In the discharge of the duty of visiting the Normal Schools located at Platteville and Whitewater, and being present assisting in the examinations of the senior classes, with a view of determining upon the propriety of bestowing upon the members of the same, diplomas of graduation, your committee proceeded to Platteville, and was present during such examinate the close of the year in July last.

The President and entire Faculty united in affording the committee the greatest possible facilities for properly accomplishing. the object of the visit, and by arrangement with them, the plan adopted was to have the Faculty conduct the exercises of the first day themselves, upon the usual programme, (the recitations being in review, mostly,) and the second day to be devoted to such exercises as might be called for by your committee, to be conducted in part or entirely by ourselves. By this method we were enabled to observe, not only the proficiency of the students but the method of instruction employed, as well as to avoid the almost inevitable tendency upon such examinations to exhibit in such branches as show the greatest proficiency of pupils or aptness of eachers.

The senior class was examined by your committee in the branches designated by them upon the second day, without intimating the study or topic (with a single exception), until assembled in the class-room, and as thoroughly as it was practicable or advisable. The result was very satisfactory in every instance, and upon all the members of the class, was conferred the honor of the graduating diplomas, in accordance with the recommenda-

tions of the President. Their names will be found in the report of the President, and the record of their standing upon the books of the school, the exhibition of their scholarship, as appeared from their examination, as well as their high aims, general culture, strength and independence of thought and expression, as apparent in the graduating exercises in which they engaged, and in the personal intercourse which the committee held with them, gave unmistakable evidence of ability and assiduity on the part of instructors, faithful application on the part of students, and great promise of usefulness and power in the future career of the graduates.

While your committee speak thus emphatically in a general manner of the results of their observation, they do not wish to be understood as saying they observed nothing to criticise, or discovered nothing lacking. On the contrary, it seemed to your committee that there was a manifest deficiency in the departments of physical exercise, theory and art of teaching, and music. For these defects perhaps neither the faculty or students are wholly or largely in fault. The change in the faculty, had been so recent, that hardly time had been afforded for such observation, and acquaintance with the needs of the school, and demands of the Board, as is necessary for the most thorough and efficient system of management. Subsequent action of the Board of Regents has rendered it probable that the second defect mentioned will be hereafter remedied; and your committee have only to suggest, that the high expectations of the public, in regard to the qualifications of graduates of our Normal Schools, seem to render it imperative that before completing their course in these institutions, students should have instruction in some system of calisthenics, and in methods of teaching the elements of vocal music—and this without regard to the question whether their future work will be with mixed or graded schools.

In consequence of a misunderstanding as to the time at which the term at the Whitewater school would close, your committee did not arrive there in time to hear or take part in the examinations, and therefore have no report to make relating to them. The committee was present, however, during the graduating exercises, and can bear testimony that these were of a very high order generally, and included some worthy of especial commendation for their excellence. It was a matter of great regret with your committee, and of disappointment with the Faculty and school, that the Board was only represented during the examinations by the resident regent. The committee concurred in the recommendation of President Arey, that the graduates each receive the diploma.

Your committee would call the attention of the Board to the fact, that in this class at Whitewater were two young ladies who had completed the full course. but who had not yet arrived at the age of nineteen years, and that the rule prescribes that age, as the minimum at which diplomas may be granted. In this case there appeared to be no question, but that upon every ground except that of age; these were as fully entitled to diplomas as any in the class, and they only lacked a few weeks of the requisite age. Your committee would recommend that such action be taken by the Board, if it should seem wise, as will enable committees in the future to use their discretion about conferring the diplomas immediately, in such cases, rather than require them to wait until they arrive at the prescribed age, before receiving them.

All of which is most respectfully submitted, in behalf of the committee.

W. H. CHANDLER,

Chairman.

Madison, Wis., Dec. 30, 1871.

III.—REPORT OF THE PRESIDENT OF THE PLATTE-VILLE NORMAL SCHOOL.

To the Hon. Samuel Fallows,

Superintendent of Public Instruction:

Dear Sir:—I take great pleasure in presenting my second annual report, in which I shall give a brief outline of the work accomplished in this school during the past year. My first report was prepared near the close of the fall term of 1870, and I need not repeat the facts therein stated.

The attendance for the year ending July 7, 1871, as summed up in the annual catalogue, was as follows:

NORMAL STUDENTS.

Ladies	81
Classified as follows:—	4 =
Senior Class	15 26
Junior Class	
PREPARATORY AND ACADEMIC.	
Ladies	91
Ladies	91 ——163

The winter term, from January 3 to March 24, 1871, passed away pleasantly, and I believe good progress was made. The attendance was more regular than during the fall term, as there was less demand for teachers. Somewhat more than one hundred Normal Students were enrolled during the term.

The Spring Term opened April 18. The attendance was less than during the previous terms, yet it was all we had reason to expect at that season of the year.

The Honorable Board of Regents held a meeting in this piace on the 6th day of June, which gave them an opportunity to become personally acquainted with the school. Their visit was an occasion of great interest to us all, and I heartily wish that our facilities for communication were such that we might be favored with more frequent visits from members of the Board.

The committee of Examination appointed by the Superintendent, consisting of Prof. D. E. Holmes, of Berlin, Prof. W. F. Yocum of Lawrence University and Mrs. I. N. Stewart of Waukesha, were present during the last week of the term; and the Regents were represented by Messrs. Whitford, Chandler and Robbins. Superintendent Fallows was also present at the graduating exercises, which were held Friday, July 7, commencing at 9 o'clock, A. M. The following was the programme:

DEVOTIONAL EXERCISES, conducted byRev.	W. C. WHITFORD.
SALUTATORY ESSAY—" The Grapes are Gathered," ORATION—The Changes of Time ESSAY—Geodes ESSAY—The True Teacher	GEORGE D. UTT. MABY E BASS.

ORATION—Heart versus Intellect	L. J. ARTHUR.
Essay—" Whosoever Will,"	Achsah Morgan.
ORATION—Purpose in Life	
There are I also a	

MUSIC.

MUSIC.

ESSAY—"To be, to do and to Suffer,"	
ORATION—" Westward the Star of Empire,"	'WILLIAM H. UTT.
Essay—"Oren the Windows,"	
CLASS ORATION—(Class of 1870)	
Essay—Battle Fields, with Valedictory	

MUSIC.

The President of the school then addressed the class briefly, after which Superintendent Fallows presented the diplomas, accompanying each with appropriate remarks; "taking up each topic discussed by the class, and crowning it with matchless skill and beauty."

Hon. W. H. Chandler addressed the class in behalf of the Board of Examiners; and Prof. D. E. Holmes, Chairman of the Examining Committee, also addressed the audience.

The graduates of the school now number thirty-five, most of whom are engaged in teaching, as follows:

Class of 1869.	
Name.	Teaching at
Lewis Funk	Omro.
Melvin Grigsby

Since the opening of the school in October, 1866, nearly four hundred Normal students have been enrolled. How many of this number are now engaged in teaching, we cannot accurately determine, as very many have failed to make the reports promised when they entered the school.* It is fair to presume, however, that many of them find employment in the school room at least part of the year. Of course, there are some of these students who never will teach, yet if they make better men and women, and better members of society for the instruction they have received in the school, I cannot think the State will be the loser for the advantages it has given them.

The term just closed, opened on the 5th day of September, with the following Faculty:

EDWIN A. CHARLTON, A. M.,
President and Professor of Mental and Moral Science.

DUNCAN McGREGOR, A. M.; Professor of Mathematics.

D. GRAY PURMAN, A. M., Professor of English Language and Literature.

> GEORGE BECK, M. S., Professors of Natural Sciences.

EVA M. MILLS, M. S., Teacher of Geography and History.

CAROLYN E. ADAMS, B. S., Principal of Academic Department

EURETTA A. GRAHAM, Principal of Model School.

T. J. COLBURN, Teacher of Vocal Music.

The term has been a prosperous one. The enrollment has been as follows:

In the Normal Department In the Academic and Preparatory Department In the Model Department	105
Total	312

^{*}In addition to the obligations required by the regulations of the Regents, the students in this school have signed the following pledge: "I will report to the Principal of the Normal School at Platteville, as often as twice every year for at least two years (after leaving school), and once each year thereafter, so long as I remain a teacher. When I leave the work of teaching, I will notify the Principal of the school aforesaid, with my reasons therefor."

Of those enrolled in the Normal Department, fourteen belonged to the "Institute Class," and were admitted without examination. There were twenty others who have never taken the obligation of Normal Students, many of them not being of the required age, and some not residing in the state; so that there have been in attendance during the term, one hundred and twenty who have been nominated by County Superintendents, and who have declared that it is their "intention to engage in teaching in the schools of this state." This is an increase of twenty-one over the corresponding term of last year.

During the early part of the term, our Normal room was filled to overflowing, but the demand for teachers, which has been unusually pressing the past fall, has reduced our numbers considerably. Still, the number of those who intend to complete the course of study, seems to be steadily increasing.

During the summer vacation, notice was given that an "Institute Course" of six weeks would be held in connection with the school, at the opening of the term. It was our intention to make this a separate class in all its exercises, but as only twelve or four-teen students came expressly to take this course, we assigned them to the regular classes during the forenoon and devoted the afternoon to institute work, conducted by the different members of the faculty. Some of our regular students who expected to teach during the winter also joined the class, so that there were about twenty-five in all. Most of the branches usually taught in the common schools were reviewed and methods of teaching discussed.

Superintendent Holford of this county was untiring in his efforts to promote the success of the Institute Course and intended to spend at least two weeks with us, but on account of illness was able to be here the last week only. He gave instruction part of the time and devoted the last two days to an examination.

Early in the term a company was formed for military drill, under the charge of Professor Purman, who had served as Major of the 41st Wis. Vols. In response to an application made to his Excellency, Gov. Fairchild, we received a full supply of arms

10—(App.) STP. PUB. INS.

Doc. 12.)

and equipments. The drill was usually held four times a week, immediately after school, until the approach of winter compelled us to suspend it for the time being, as we have no suitable room in the school building, for practice. We intend to resume it, however, as soon as circumstances will permit. The effects of this drill have been quite apparent in the improved bearing of the young men who have engaged in it, and I cannot doubt but it will add much to the efficiency of the school.

I should do injustice to my own feelings were I to omit to mention what the Board of Regents have done for this school during the past year. By their appropriations, a room has been fitted up for a cabinet, and a fine collection of corals, shells and sponges purchased of H. T. Woodman, Esq., of Dubuque, Iowa. J. H. Evans, Esq., of this place, has also placed in our cases his private collection, consisting of about three thousand mineralogical and geological specimens, many of which are very valuable.

The philosophical and chemical apparatus already ordered, amounting to about one thousand dollars in value, will afford great assistance in the teaching of the natural sciences. We have also received valuable additions to our reference library and to the furniture of our recitation rooms; and last, not least, a splendid piano, which came just in time for the closing exercises of the fall term.

It may not be out of place for me to make public acknowledgment of many favors received from our resident Regent, Hon. Hanmer Robbins, whose earnest efforts in behalf of this and other normal schools, entitle him to the gratitude of all the friends of education in the State.

In conclusion, I desire to express to you, and through you to all the members of the Board of Regents, my grateful thanks for the encouragement you have given me, and for the confidence you have reposed in me, and to assure you that it will be my earnest effort to prove worthy of your good-will.

With respect, I remain,

Your obedient servant,

EDWIN A. CHARLTON.

CALENDAR FOR 1872.

Winter term opens January 2. Closes March 22—12 weeks.

SPRING VACATION.

Spring term opens April 29. Closes June 27. 12 weeks. Examination of Graduating class June 25 and 26. Graduating exercises Thursday, June 27. Meeting of Alumni Association Thursday evening, June 27.

REPORT OF THE EXAMINING COMMITTEE.

Hon. Samuel Fallows,

Superintendent of Public Instruction:

Sin: The committee appointed as visitors and examiners of the Platteville Normal School, would respectfully report, that on the 5th and 6th days of July, they carefully attended to the work assigned them.

This school is divided into three departments: normal, academic and model. Each of these received our careful and impartial attention. In the normal department we heard several recitations, conducted by the different teachers, and were gratified with both their quality and method. Thoroughness and independence of thought were generally evinced, but these were far more noticeable than careful and accurate analysis. Breadth and independence of thought, guided by definite classification and clear analysis, should be prominent in all schools, but especially in all normal schools. For as pupils are taught, so they will, to a very great extent, subsequently teach.

The classes in Geometry, Algebra and Astronomy showed careful teaching. The most of these classes defined clearly, analyzed properly, and were prompt and accurate in their work.

The classes in written Arithmetic were ordinary. Many, however, performed their examples readily, and gave, in general, satisfactory explanations, but some showed that they had not had a thorough drill in the fundamental principles. The methods of instruction seemed excellent, but the results, on the whole, were far from what should be expected. We would urge more care in examining and grading pupils in this study, and repeated and thorough reviews of fundamental principles until they are well acquainted with them. Geography, in all its branches, was well taught. The pupils were quite ready in their answers, and showed a good knowledge of topography and map-drawing.

Classes in Botany and Science of Government showed special drill. They evinced a good knowledge of the subjects assigned them. They recited topically, but after their recitations, judicious questioning showed that they understood well what they recited.

Classes in rhetoric, criticism and grammar showed but a comparative knowledge of these subjects. The pupils seemed to be in that peculiar state of mind which lies between knowing and not knowing. Some did well, but many showed clearly that they had not been taught to rely entirely on themselves during recitations.

In a normal school it is of vital importance that pupils be so taught that they can accurately and clearly teach what they know to others. Would suggest that pupils in this department be taught more self-reliance in their work.

Classes in Latin, and English literature, appeared well. The pupils in the latter class gave clear and well defined views of the different periods in literature, with their representative wr ters. They showed great research in their work.

We do most heartily commend the especial attention that has been given to reading. It is of primary importance that those who are to be teachers should themselves become good readers. The classes we heard had been well drilled.

With the work of this department, as a whole, we were highly pleased. Both the teaching and governing reflected great credit upon the teachers.

The Academic Department gave evidence of good government and of more than ordinary scholarship. With its general appearance, order and methods of teaching we were quite well pleased. The great object of this department is to prepare pupils for the Normal, and hence as soon as they are thus fitted, they are promoted. This leaves the more crude and immature portion to be worked up, and therefore this may very properly be called the great drill department.

The classes we heard in this department evinced commendable care and thoroughness in their teaching. The pupils in grammar gave definitions well, and, for the most part showed, by their illustrations, that they understood quite well what they recited.

The pupils in arithmetic were able to perform most of the examples assigned them, and some analyzed and explained very well.

The Principal of this department is doing a good work. He has had under his care during a part of the year more than one hundred pupils. There is in this department great room for improvement, and we would express the hope that its present teacher may be able to make it, just what it should be, in all respects.

The Model Department is truly in good hands. The classes in reading, arithmetic, geography and composition writing were well conducted. The mode of teaching reading was by the word-method, and conducted so as to break up most of the bad habits into which beginners are apt to fall. The pupils in arithmetic and geography appeared well and showed a very good elementary knowledge of these subjects. The system of composition writing is plain and practical, and is worthy a place in every primary school in the State.

The deportment was good, but not what it should be for a model school.

We would recommend that the Academic and Model Departments be more carefully graded, and that a course of study be introduced, as in the Normal Department. Thus these departments will become fair representatives of well-managed schools, Then the pupils from the Normal, teaching in these departments, will obtain correct ideas of model schools. They will not only become good teachers in theory, but will also have much experience in teaching and governing first-class schools. The pupils should spend more of their time in teaching in these departments under the eye of some experienced teacher.

We would also recommend that the distinctive normal element be brought out more fully in the school. Each department and grade should so feel it, and practice it, that a teacher who ca spend only time enough to prepare himself for a third grade certificate, may find the normal school better than the best high school or academy, because he is thus taught how to teach what he learns.

We do most heartily commend the introduction of drawing. We are pleased with the progress that has been made in teaching this important branch.

We urge that plain and perspective drawing and music be taught in every department.

We also urge that an accomplished elocutionist be employed in the school.

The discipline of this school is most excellent. It aims to teach every pupil to govern himself and thereby secure that self-control, without which no teacher can succeed. We regard the school in a very flourishing condition. We believe that President Charlton and his invaluable corps of assistants are all working assiduously and faithfully, and that this institution, as the educator of so many good teachers, is deserving the full and cordial support of the people of the state.

D. E. HOLMES, Mrs. I. N. STEWART, W. F. YOCUM.

PLATTEVILLE, August 12, 1871.

IV.—REPORT OF THE PRESIDENT OF THE WHITE-WATER NORMAL SCHOOL.

Hon. Samuel Fallows,

Superintendent of Public Instruction:

Since the date of my last report this Institution has passed through a year of prosperity unprecedented in its history. During the first term, the energies of the school found constant employment, but since the commencement of the present term the powers of the faculty have been taxed to their utmost. The instructors have scarcely been able to secure for themselves a leisure hour even in the quiet of their homes, and it gives me great pleasure to state that all have labored cheerfully and unremittingly, and have faithfully discharged the duties devolved upon them. Another year of such severe work must tell upon the health of each and permanently injure their future usefulness. The necessity of additional help on the corps of instruction is, in my opinion, thoroughly demonstrated if, the highest good of the school is the end sought. An instructor in elecution and another in physical culture are greatly needed. An assistant in mathematics would give greater efficiency both in this department and the general work of the school by affording a more complete division of labor, without which the best results cannot be obtained.

The following statements will set forth the present work of the classes of 1870 and 1871:

Class of 1870.

- MARY L. McCutchon—Assistant in the High School at Horicon, Wisconsin. Salary, ——
- J.W. Congdon—Principal Public School at Juneau, Wisconsin. Salary-\$600.

- CHARLES L. BROCKWAY—Principal Public School in Orange, Orange Co. Texas. Salary unknown.
- George M. Bowen—Professor of Mathematics in Liberal Institute, at Jefferson, Wisconsin. Salary, \$800.
- SAMUEL R. ALDEN—Assistant in Private School, Buffalo, N. Y. Salary, \$1,000, with a fair prospect of \$1,500 another year.
- ANDREW J. STEELE—Principal Colored Normal School, Tougoloo, Mississippi. Salary, \$1,500.

Class of 1871.

- MINNIE COLE—Principal of Primary Department in a Ward School at Madison. Salary \$450.
- MAGGIE E. McIntyre—Teacher in Soldiers' Orphans' Home, Mrdison. Salary \$300 and board.
- EVA KINNEY—Assistant in Public School at Elkhorn, Wisconsin. Salary, \$400.
- SARAH E. EDWARDS—Principal District School in Wauwatosa, Wisconsin. Salary \$500.
- HANNAH STACKPOLE-Married.
- MARY W. COLTON—Unable to teach at present, on account of ill health.
- ANTONI CAJORI—Principal German School, Whitewater, Wisconsin. Salary \$600.
- WILLIAM E. ANDERSON—Principal District School at Brookfield, Wisonsin. Salary \$600.
- DORA L. O'CONNOR—Assistant in Public School at Sheboygan Falls, Wisconsin. Salary \$400.
- JENNIE E. FOWLER-Principal Public School at Darien, Wisconsin. Salary \$550.

UNDERGRADUATES.

One hundred and ten of the under-graduates are now teaching in the common, district and graded schools of the State. Besides these, ninety-five others have taught since they entered upon their course of study in this Institution. It cannot be definitely stated how many of these, last named, are in charge of schools, but doubtless a large proportion of them. There are many others, about whose present duties I have no means of knowing, but it is safe to assert that there are at least two hundred undergraduates laboring in the Public Schools of Wisconsin, at this writing. Others, still, are in neighboring States at work returning to the inhabitants of those States, aid that the teachers of our own

have received from them. Knowing these facts, is it just to assert that the Normal Schools do not extend their influence to the Common Schools?

INSTITUTES.

In accordance with the wishes of the Board, the present term opened with an Institute course of six weeks. Thirty-seven students presented themselves for instruction in this department, many of them being from the best class of district school teachers in this, and the neighboring counties. All remained until four weeks of the term had expired.

At that time a portion were obliged to leave to attend their several county examinations. The remainder continued through the course—a goodly number of them joining the regular classes of the school when this time had expired. As the interruption here alluded to is likely to occur again, and as the work of the Normal School Institutes must of necessity be much crippled by it, it is recommended that the power to grant certificates equally with the several County Superintendents be conferred upon the Presidents of the Normal Schools.

In addition to drill in the ordinary branches, the Institute course comprised a series of carefully digested lessons on theory and practice, a brief course in civil government, and lessons in linear and perspective drawing, giving principles by which the active teacher can introduce this very important branch into the district schools. Another year will afford better opportunities to those who attend this course, as both the programme and the corps of instructors will be more completely organized.

The crowd of pupils who came in at the commencement of the present term was unexpected; an institute teacher who had been engaged failed to present himself, and the regular faculty found themselves hardly equal to the work demanded of them.

ACADEMIC INSTRUCTION.

It is asserted that academic instruction ought not to be given in the normal school course; that it is the proper business of the

colleges, academies and other schools of the state to do this work; that the peculiar field of influence of the normal school is to be found in imparting methods of instruction; that the normal school is not needed for other purposes. If these statements are correct, then follows the pertinent enquiry, why have not these institutions done their work? Candidates for the normal course are frequently found completely deficient in a thorough knowledge of almost all the branches taught in the common schools. is it indeed that any teacher presents himself with a competent knowledge of the ordinary branches when he asks admission to the normal school. With perhaps two or three exceptions, only, all find it necessary to pass through a severe drill in the common branches, before they have them sufficiently in hand to teach them in a manner to arouse the sluggish mind with which they have to deal. Is it possible, I would ask, for any one to give methods by which teachers can impart knowledge which they themselves have never possessed?

In the oldest states, these facts exist, and to meet the exigencies of the teachers of these States we find the courses of study extended. Massachusetts, within the year, has added in some of the normal schools, two years of academic study, making the ull course four years. Many of the New York schools offer to the teachers of that state four years of academic study, and as the normal work defines itself, time and academic instruction gain prominence in these institutions.

Why is not the normal school the proper place for the teacher to receive his complete education? How is it in the other af fairs of men? Does the watch-maker gain his necessary knowledge of mechanics in the common machine-shop? Does the mason acquire his knowledge of his work in the brick-yard or the quarry? Does the carpenter learn any part of his trade in the saw-mill, or does he, by working himself, and by observing others, acquire a knowledge of his business, and his skill in handling his tools? Does not the lawyer possess himself of the principles of law at the same time he familiarizes himself with the practice in the courts? And is not the same idea carried out in the schools of medicine, divinity, mining and engineering?

Moreover academic instruction should be given in the schools of method, because it can be and is better done there, and it is given with reference to a definite end—the future work of the teacher. Besides, the drill is more emphatic and exhaustive. This gives time for the mind to do its unconscious work of defining and eliminating the ideas inculcated. The necessity for time to do this unconscious work is imperative, for that mind works most effectually which has secured for its acquirements the highest state of unconsciousness. Every one knows that he is greatest master in any department who works with the least effort, and he who works with the least effort produces the most accurate and lasting results. Every one knows that the most unconscious musician is he whom all delight to hear, (so is every one familiar with the fact that instinct is a better guide than reason, because its action lies wholly in unconsciousness).

Again, no one can accomplish a master's work until he has formed for that work a deep and abiding susceptibility—a love that shall shape all energies and give to his profession a purpose that the jostlings of life cannot turn aside. All know how forbiddingly a new purpose in life presents itself, and with misgivings we enter upon the prosecution of it, and how often we are inclined to turn back, upon old habits and old thoughts. looking back must continue and must hinder us until the new field has been thoroughly explored, and the mind has discovered for itself the new relations of thought there, and harmonized them with the knowledge it has already acquired. A susceptibility, such as shall keep one to his purpose, is not formed in a day, nor in the time set apart in a partial normal course. This love for one's work too, is most perfectly formed before the mind is disturbed by other thoughts, and, as the teacher's work should be a life work, if it is to be disenthralled from the lumber of the other professions, should not the state, if she seeks the highest good for her children, do more for them, rather than less?

FACULTY.

OLIVER AREY, A. M.,
President and Professor of Mental and Moral Philosophy.

J. T. LOVEWELL, A. B.,
Professor of Mathematics and Latin Language.

T. C. CHAMBERLAIN, A. M.,
Professor of Natural Sciences and Theory and Art of Teaching.

MRS. H. E. G. AREY, A. M., Preceptress and Teacher of English Literature, French and Drawing.

MISS SARAH A. STEWART,
Teacher of Geography and History and Gymnastics.

MISS CATHARINE LILLY,
Teacher of Grammar and Composition.

S. R. ROCKWOOD,
Principal Academic Department.

HARVEY H. GREENMAN, D. D. S., Professor of Vocal Music.

MISS MARY A. BRAYMAN,
Teacher and Critic in Primary Department.

MISS VIRGINIA DEICHMAN, Teacher of Instrumental Music.

WILLIAM J. SHOWERS, Librarian.

CIRCULAR.

Location.—This school is located at Whitewater, Walworth county, a village containing from three to four thousand inhabitants, and situated on the line of the Milwaukee and Prairie du Chien Railway. It is only a few miles from the junction of the Chicago and Northwestern with the Milwaukee and Prairie du Chien road, and about one hundred miles northwest of Chicago. It is thus easy of access, and located in the most densely populated portion of Wisconsin.

The ground on which the Normal School building stands is found, by recent survey, to be the highest point between Lake

Michigan and the Mississippi, and the wide extent of rolling prairie, oak openings and small lakes which it overlooks, renders its position one of great beauty.

Building and Grounds.—The edifice is new, built of cream colored brick, and is of the modern style of architecture. It is one hundred and eight feet long by fifty-seven wide, and three stories high above the basement. The whole building is heated by steam, thoroughly ventilated, and no necessary labor or expense has been spared to adapt it to the purposes for which it has been designed.

The grounds embrace an area of ten acres, which have been handsomely graded and ornamented with walks, lawns, evergreens, shrubs and flowers, the whole designed to illustrate to the students the necessary surroundings of the school-house—to cultivate the æsthetic, as well as reasoning powers, and to awaken in the students a love of nature which shall find practical expression wherever they may be called to labor.

Terms of Admission.—The Board of Regents of Normal Schools has adopted the following regulations for the admission of students to any State Normal School:

- 1. Each assembly district in the State shall be entitled to six representatives in the Normal Schools, and in case vacancies exist in the representation to which any assembly district is entitled, such vacancies may be filled by the president and secretary of the Board of Regents.
- 2. Candidates for admission shall be nominated by the county superintendent of the county (or if the county superintendent has not jurisdiction, then the nomination shall be made by the city superintendent of the city,) in which such candidates may reside, and they shall be at least sixteen years of age, of sound bodily health and of good moral character. Each person so nominated shall receive a certificate setting forth his name, age, health and character, and a duplicate of such certificate shall be immediately sent by mail, by the superintendent, to the secretary of the board.

- 3. Upon presentation of such certificate to the Principal of a State Normal Sch ol, the candidate shall be examined, under the direction of said Principal, in the branches required by law for a third grade certificate, except history, and theory and practice of teaching, and if found qualified to enter the Normal School in respect to learning, he may be admitted, after furnishing such evidence as the Principal may require, of good health and good moral character, and after subscribing to the following declaration:
- I, ————, do hereby declare that my purpose in entering this State Normal School is to fit myself for the profession of teaching, and that it is my intention to engage in teaching in the public schools of this State.
- 4. No person shall be entitled to a diploma, who has not been a member of the school in which such diploma is granted, at least one year, nor who is less than nineteen years of age; but a certificate of attendance may be granted by the Principal of a Normal School to any person who shall have been a member of such school for one term, provided that in his judgment such certificate is deserved.

Design and Organization.—The design of the School is to furnish teachers for the public schools of the State, thoroughly trained for their profession.

In its organization it consists of a Normal and a Training Department. The Normal Department is to provide thorough instruction in all the studies pursued, conducted in accordance with the most approved methods in teaching. The students will thus be familiarized with the best methods of instruction at the same time that they are acquiring the knowledge necessary for the profession. As first impressions are the most enduring, it is thought that drill in studies and methods of teaching should run parallel with each other.

The Training Department consists of three sub-departments—the Primary, Intermediate and Academic. Its object it to test the pupils' power of self-control, their capacity to govern others, and to afford them an opportunity to practice modes of teaching

with which they have been made familiar in the Normal Department. This practice will be had under the supervision of experienced instructors, who will point out their errors, commend their excellencies, suggest to them means of improvement, and thus enable students to determine for themselves whether they are qualified to undertake the arduous work of teaching.

During this period of work in the Training department the pupils are called forward with their classes, in the assembly room, and their method of management subjected to the close but kindly criticism of teachers and fellow students. They are thus enabled to overcome any natural diffidence, and to correct such errors of manner and method as would otherwise be liable to form pernicious habits highly detrimental to their future work. Other criticism lessons are, also, interspersed with the daily work of the school, testing and strengthing the power of management in the pupil, as well as the perception of a necessity of thorough drill at the hands of the teacher.

Privileges of the Pupils.—All Normal pupils will receive their tuition free. A well selected reference library has been obtained, to which all students have access. All necessary books will be furnished for the slight charge of one dollar and fifty cents per term. If students own books on the subjects of the courses of study, they will do well to bring them, together with such books of reference as they may possess.

Apparatus.—A well assorted apparatus for the purpose of illustrating the principles of Chemistry, Natural Philosophy, Physiology, Astronomy, etc., is in possession of the institution, affording superior advantages for the prosecution of these branches. One thousand dollars will be expended in this department before the opening of the next term.

Physical Exercise.—A teacher of light gymnastics is connected with the school. A sufficient apparatus for the pupils now in attendance has been secured, and the classes brought into successful training. We believe that such exercise, wisely managed, gives vigor to the body and activity to the brain, and that it is thus time and strength saved to the pupil.

As a result of the brief introduction of these exercises between the hours of study and class work, it is found that the health of the pupils during the past year has been maintained at a higher average than is common.

Board.—Board can be obtained in Whitewater at from \$3.00 to 3.50 per week. Facilities will be afforded for club board or self board to such as may desire it. Those adopting this method of board may bring their expenses within two dollars per week, though a different plan is perhaps more favorable for study.

Admission to Training School.—Application for admission to the Training Department should be made either in person, or by letter to the Principal, or to the Hon. T. D. Weeks, Whitewater.

The rates of tuition in this department are as follows:

Primary	30	cent	e per	week.
Academic	50	cent	s per	week.
Lessons on piano		• • • •		\$12 00
Linear drawing				
Water-color drawing				
Oil painting				12 0 0
-				

Literary Societies.—An active literary society has already sprung up among the gentlemen, and another among the ladies, of the school. Their public sessions are held at the close of the spring term.

COURSES OF STUDY.

Three courses of study are established—

- 1st. An institute course of six weeks.
- 2d. An elementary course of one year.
- 3d. An advanced course of three years.

The institute course is designed to meet the wants of those teachers who desire to familiarize themselves with the most approved methods of teaching the subjects mentioned in the course.

The elementary and advanced courses will have for their object thorough drill in the bran hes pursued, accompanied with instruction in the best methods of teaching them.

SENIOR YEAR.								

SUPERVISION.

All necessary supervision will be held over the habits and deportment of the pupils in their boarding houses. They will be held to a strict account for the keeping of study hours, and no calls will be allowed during the time set apart for this purpose. No ladies of the Normal School will be allowed to receive calls from gentlemen after 6 o'clock in the evening. or to ride or walk with them without permission from the Principal.

Such rules of upright lady-like and gentlemanly deportment will be given to the pupils as will tend to their growth in moral excellence and in that cultivation of manners which may place them as models before their pupils when they are called to teach. All pupils are expected to yield ready obedience to the regulations of the school, as it is self-evident that no others are suitable candidates for the work of teaching.

ACKNOWLEDGMENT.

The Institution is indebted to the following members of the Botany Class for donations to its Herbarium. The number of plants each has analyzed is also given, as indicating the work they have done in this department:

Name of Donors.	No. of specimens dona- ted.	No. of plants Analyzed
Miss Maggie E. Corklin	32	115
Miss Jennie Church	·	161
Miss Addie H. Langley	-	183
Miss Nellie O'Connor	30	165
Miss Lillie Redington		187
Miss Elmine Rice	60	120
Miss Celia A. Taylor	. 50	110
Mr. C. B. Clark	. 75	80
Mr. F. H. King	. 75	83
Mr. James Larkin	. 30	78

The Institution is also indebted to numerous friends for miscellaneous donations to its collection:

TERMS.

The scholastic year will consist of two terms: The first will commence in the first Tuesday in September and continue twenty weeks; the second on the first Tuesday in February and continue twenty weeks.

THE STUDENTS' DAY.

One day in each term the Faculty retire, and give the care of the Institution into the hands of the students. From among their number a temporary Principal, Preceptress and Professors are chosen, who take entire charge of the school and conduct its exercises.

The object of thus putting the Institution under the care of the students is to test their moral culture, their executive ability and their devotion to their work. Thus far this day's work has been most successfully performed, the best results obtained, and the day is held to be the most profitable one of the term.

In closing allow me to tender to you our thanks for your kind appreciation of our work, both in your official capacity and as a friend of each member of the Institution.

Respectfully submitted,

OLIVER AREY.

REPORT OF EXAMINING COMMITTEE.

Hon. Samuel Fallows,

Superintendent of Public Instruction:

DEAR SIR—According to instructions, the committee of visitors arrived at Whitewater in the afternoon of June 26th; but they immediately ascertained that the regular Normal exercises of the present school year were already closed.

They are, therefore, unable to report concerning the condition and progress of the Normal work.

Yours very respectfully,

SAMUEL SHAW,
J. Q. EMERY,
G. M. GUERNSEY,

Committee.

WHITEWATER, Wis., Aug. 31, 1871.

V7—REPORT OF THE PRESIDENT OF THE OSHKOSH NORMAL SCHOOL.

HON: SAMUEL FALLOWS,

Superintendent of Public Instruction:

DEAR SIR:—In accordance with your request, I submit the following report of the school under my charge:

Owing to delay in furnishing the building, the school did not open until September 12, and the building was formally dedicated on the 19th of the same month.

Notwithstanding the delay and uncertainty of commencement, forty-six pupils were enrolled in the Normal department upon the first morning, and the number in every department has steadily increased to the present time.

The numerous communications received, especially from the central and northern portions of the state, expressing the desire and determination to avail themselves of the privileges here furnished, is sufficient comment upon the wisdom of increasing the facilities for Normal instruction.

The Faculty is organized as follows:

GEORGE S. ALBEE, President,
Teacher of Moral and Mental Science, and Theory and Art of Teaching.

ROBERT GRAHAM,
Teacher of Reading and Music, and Director of Training School.

D. E. HOLMES, Teacher of Natural Science.

ANNA W. MOODY, Teacher of Rhetoric and Mathematics.

MRS. D. E. HOLMES,

Teacher of Geography and History.

MARTHA E. HAZARD, Teacher of English Grammar and Physical Culture.

MARIA S. HILL,

Teacher in Grammar Department of Training School.

ROSE C. SWART,
Teacher in Primary Department of Training School.

A careful oversight of all matters pertaining to the pupil's welfare is maintained by the faculty, and measures taken to make his connection with the school a source of moral as well as mental growth.

The library of text books is ample; but works for general reference are much needed and will doubtless be supplied at an early date.

A liberal appropriation for philosophical and chemical apparatus has been made, and the Institution will soon be well provided with the necessary means of illustration in these departments.

The following table gives the enrollment during this term:

Department.	Male.	Female	Total.
Normal Department		65 24 17	97 46 46
Total in school	83	106	189

Calendar for 1872.

Winter term opens Tuesday, January 9. Spring term opens Tuesday, April 9. Fall term opens Tuesday, August 27.

In every vocation skilled labor is rare, and, therefore, at a premium. The teacher's calling follows the general law, and trained teachers are sought for eagerly, while the untrained and inexperienced must be content with the pittance they earn.

It may well be asked what does best train the teacher for his work. The Normal Schools are earnestly striving to answer this question; how fully and satisfactorily, can be determined by fruits alone.

Since so large a number of Normal School pupils can devote but a very limited time to the needed training, the first year's work of this school is especially arranged for a thorough drill and culture in the branches taught in the common school.

Feeling that the frequent repetition of the terms "higher" and "lower branches" of education begets in the mind of the young a lack of respect, if not contempt for the noble foundation branches of school work, (and that this sentiment is wide spread is evidenced by unequal remuneration and a continual strife of teachers for advanced positions,) it shall be the aim of this school to imbue the pupil with an earnest respect for the culture to be gained by an accurate discriminating acquaintance with the elements of knowledge and thought.

The hearty efforts of the pupils to realize this endeavor, gives firm assurance that the time thus spent and labor earnestly expended will not be without fruit in due time.

Very respectfully,

Your obedient servant,

G. S. ALBEE,

President.

STATE PRINCIPALS' ASSOCIATION.

Madison, December 27, 1870.

Pursuant to notice, the following Principals of Public Schools in the State assembled in the Senate Chamber:

- G. S. Albee, Racine.
- J. C. Pickard, Milwaukee.
- E. E. Ashley, Portage.
- A. Kerr, Beloit.
- J. B. Thayer, Menomonie.
- D. E. Holmes, Berlin.
- J. K. Purdy, Fort Atkinson.
- F. S. Beede, Prairie du Sac.
- J. L. Wallace, La Crosse.
- W. Elden, Palmyra.
- A. T. Stearns, Oconto.
- J. H. Terry, Spring Green.
- A. Lebourveau, Watertown.
- G. M. Bowen, Jefferson.
- C. M. Boyles, Richland Centre.
- R. W. Seaman, Clinton.
- I. N. Stewart, Waukesha.
- W. D. Parker, Janesville.
- J. E. Burton, Geneva.
- W. J. Taylor, Sun Prairie.
- S. S. Rockwood, Milton.
- B. M. Reynolds, Madison.
 - S. Shaw, Omro.
 - A. Earthman, Reedsburg.
 - G. Brousseau, Black Earth.

W. D. Parker, of Janesville, was called to the chair, and A. Earthman, of Reedsburg, appointed Secretary.

The President stated briefly the objects of the meeting, pointing out the different topics to be discussed.

On motion of Wm. Elden, the subject of compulsory education was taken up.

Remarks were made by many present, manifesting plainly that different views upon the subject are entertained by our teachers. While all agreed that the State has the right to compel attendance upon our public schools, the speakers could not agree upon the manner in which non-attendance, truancy and vagrancy are to be overcome. No conclusion as to the legislation necessary being arrived at, the following committee was appointed to report upon the subject to-morrow: S. Shaw, B. M. Reynolds and E. E. Ashley.

On motion, the following committee was appointed to draft a constitution for the government of the Association: J. Q. Emery, J. C. Pickard, D. E. Holmes, G. S. Albee, B. M. Reynolds.

WEDNESDAY, Dec. 28, 9 A. M.

The following subject was taken up for discussion: "What course of instruction best disciplines the child for good citizen-izenship?" Remarks were made by Messrs. Stewart, Ashley, Pickard, Kerr, Albee, Holmes, Rockwood, Burton, Shaw, Purdy and others. The subject was referred to the following committee: D. E. Holmes, G. S. Albee, S. S. Rockwood; the report to be made at the next meeting of the Association.

On motion of J. K. Purdy, the following subject was referred to the same committee: "How far may the State wisely prescribe matter and method of instruction in the schools it supports?"

2 o'clock P. M.

The topic, "How can teachers best gain Normal Instruction?" caused a spirited debate, in which Mr. and Mrs. Holmes, Messrs. Brown, Shaw, Reynolds, Stewart, Fallows, Emery, Albee and Purdy participated. The subject was referred to a committee

consisting of S. Fallows, J. B. Pradt, O. Arey, E. A. Charlton and R. Graham.

- J. K. Purdy offered the following resolution, which was adopted:
- "Resolved, That the management of our Normal Schools has thus far deserved the hearty approval of the teachers of this State, and that they should extend to said schools their sympathy and encouragement."

The following resolution, offered by B. M. Reynolds, was adopted:

"Resolved, That the thanks of this Association are due to the Hon. Samuel Fallows, State Superintendent, and to the Rev. J. B. Pradt, Assistant Superintendent, for the prompt and able manner in which they have revived the Wisconsin Journal of Education, and that we will use our best endeavors to extend its circulation."

A constitution was presented by J. Q. Emery, which was adopted. Under it the following officers were elected for the ensuing year;

President—G. S. Albee, of Racine.

Vice President—S. S. Rockwood, of Milton.

Secretary—A. Earthman, of Reedsburg.

Treasurer—W. D. Parker, of Janesville.

D. E. Holmes offered a resolution requesting the Legislature so to amend the school law as to include drawing among the branches in which third grade teachers are examined. A. Earthman offered an amendment so as to include physiology. The resolution and amendment, after some debate, were lost.

Gov. Fairchild extended a cordial invitation to the teachers present to meet at his residence to-morrow, Thursday, evening, and spend a few hours in social intercourse, which invitation was accepted.

1

Adjourned.

THURSDAY, Dec. 29, 9 A. M.

The reports of committees being called for, B. M. Reynolds, of the Committee on Compulsory Education, offered the following, which was adopted:

"We to whom was referred the subject of Compulsory Attendance, would recommend the appointment of a committee, consisting of W. D. Parker, G. S. Albee and J. Q. Emery, to prepare a report on that subject, which shall be presented at the next annual session of the State Teachers Association.

"S. SHAW,
"B. M. REYNOLDS,
"E. E. ASHLEY,
"Committee."

J. K. Purdy offered the following, which was adopted:

"Resolved, That in the opinion of this convention, it is both the right and the duty of the State to enforce the elementary education of all its children, in order that its citizens may be qualified to discharge the political and social duties devolving upon them."

I. N. Stewart, of the Committee on Normal Instruction, offered the following resolution, which was adopted:

"Resolved, That it is the sense of this Association that the Legislature should appropriate not less than two thousand dollars a year for the maintenance of a more complete system of Normal Institutes for the better training of teachers of our common schools."

G. S Albee presented the following, which was also adopted:

"Whereas, Adequate provision has generously been made by our Legislature for the special training of various classes of children who, by reason of infirmities, are unqualified to participate in the privileges of the public schools, while feeble-minded children receive no care from the state; therefore,

"Resolved, That this Association most earnestly and respect-

fully ask our Legislature to make this much needed provision for that most unfortunate class."

- J. E. Burton offered the following resolution:
- "Resolved, That we urge the coming Legislature so to amend our school law as to allow no pupil to enter the public school until he has attained the age of six years."

Adopted, reconsidered and laid on the table.

- G. S. Albee spoke at some length upon the self-reporting and marking systems, and answered many questions proposed by members present.
 - R. Graham offered the following resolution:
- "Resolved, That we recommend to the Legislature of Wiconsin that the Wisconsin Journal of Education be sent to every school district in the State."

After discussion by Messrs. Reynolds, North, Earthman, Graham, Albee, Rockwood and Pickard, the subject was referred to a committee consisting of S. Fallows, R. Graham and W. D. Parker.

A Kerr offered the following, which was adopted:

"Resolved, That we tender our sincere thanks to His Excellency, Governor Fairchild, for his courtesy in granting to this Association the use of the Senate Chamber, and for the interest which he has shown in furthering the ends which our Convention has advocated."

Adjourned.

2 o'clock, P. M.

G. S. Albee in the chair.

The resolution offered by J. K. Purdy in the morning, was taken up, as follows:

"Resolved, That in the opinion of this Convention, the moral and social interests of the state demand the immediate passage of a vagrancy law, compelling the attendance at school of all

children between the ages of seven and sixteen years not having constant and useful employment."

A spirited discussion arose, in which Mrs. Holmes, and Messrs. Reynolds, Stewart, North, Holmes, Graham, Carpenter, Purdy, Earthman, Elden, De La Matyr and Albee participated, after which the resolution was laid on the table.

R. Graham offered the following, which was adopted:

"Whereas, The present compilation of the school census does not show the number of children attending school, between the ages of eight and sixteen years, therefore,

"Resolved, That we recommend to the State Superintendent that three columns be hereafter appropriated to returns of the number of children of school age, attending school in the district, these columns to show: 1. Those between the ages of four and eight; 2. Those between eight and and sixteen; 3. Those between sixteen and twenty."

The subject of school organization being taken up, Messrs. Kerr, Pickard and Holmes gave some interesting school statistics, stating their methods of making out reports, averaging attendance, etc., A. Earthman offered the following resolution, which was adopted:

"Resolved, That a committee three be appointed to prepare a blank, giving the school statistics of our graded schools on a common basis, said committee to report at the annual session of the State Teachers' Association."

The chairman appointed as such committee, A. Earthman, J. C. Pickard and J. K. Purdy.

J. K. Purdy made remarks upon his method of conducting spelling, excuses for various reasons, punctuality, and other topics, and D. E. Holmes spoke upon the same subjects.

Adjourned.

W. D. PARKER, President.

Albert Earthman, Secretary.

CONVENTION OF SUPERINTENDENTS.

Madison, December 28, 1870,

The convention was called to order in the Senate Chamber, at 71 P. M.

State Superintendent Fallows was elected President, and Samuel Shaw, of Omro, Secretary.

Principals of public schools were invited to participate.

The President stated the objects of the meeting, after which, upon roll call, the following Superintendents reported themselves present:

T. D. Kanouse, Dane, 1st district.

S. C. Coolidge, Dane, 2d district.

Carroll Lucas, Dunn.

D. B. Lyon, Fond du Lac.

Samuel Parks, Iowa.

Amos Squires, Jefferson.

Hosea Barns, Kenosha.

J. L. Foley, Milwaukee, 2d district.

G. W. Putnam, Richland.

J. W. Harris, Rock, 1st district.

C. M. Treat, Rock, 2d district.

C. F. Viebahn, Sauk.

Amos Whiting Trempealeau.

M. Montague, Walworth.

Wm. S. Green, Waukesha.

T. S. Chipman, Waushara.

Samuel Shaw, Winnebago.

J. Q. Emery, Wood.

- W. D. Parker, City Superintendent, Janesville.
- G. S. Albee, City Superintendent, Racine.
- B. M. Reynolds, City Superintendent, Madison.
- A. H. Ellsworth, City Superintendent, Green Bay.

Superintendent Barns introduced the following resolution, and moved its adoption:

"Resolved, That this convention recommend to the Legislature an act requiring the division of counties into superintendent districts, so that the number of schools in each district shall not exceed one hundred."

This resolution was referred to the committee on Additional Supervision.

Superintendent Lucas offered a resolution in favor of amending the School Law, so as to fix the school month at four weeks, of five days each. Carried.

A warm discussion ensued upon the question: "How many months of school should the districts be required to maintain, in order to entitle them to public money?"

The president announced the following committees:

Additional Supervision..—T. D. Kanouse, G. W. Putnam, H. Barns, M. Montague, J. Q. Emery.

Requiring Teachers to attend Institutes and Districts Boards to allow Time.—J. Q. Emery, M. Montague, S. Parks, G. S. Albee, B. M. Reynolds.

Making Township System Obligatory.—H. Barns, A. Squires, J. S. Foley.

Compensation of District Officers.—C. M. Treat, G. W. Putnam, J. W. Harris.

To allow County Superintendents to License each other.—S. C. Coolidge, W. S. Green, A. H. Ellsworth, M. Montague, C. F. Viebahn.

Teachers' Certificates.—A. Whiting, C. F. Viebahn, T. S. Chipman, D. B. Lyon, A. Squires.

Charging Fee for Private Examination.—M. Montague, W. S. Green, J. W. Harris.

Course of Study for Mixed Schools.—S. Shaw, C. Lucas, G. S. Albee, T. S. Chipman, A. H. Ellsworth.

Normal Instruction.—C. Lucas, J. Q. Emery, C. M. Treat, S. Parks, A. Whiting.

School Facilities.—T. S. Chipman, W. S. Green, S. C. Coolidge.

Adjourned.

DECEMBER 29-10 o'clock A. M.

Minutes of the evening session read and approved.

The Committee on Additional School Supervision reported against the adoption of the resolution of Mr. Barnes, limiting the number of Schools in a Superintendent district to 100, which was agreed to.

A resolution was adopted for allowing counties of more than 10,000 inhabitants to appropriate \$200 for an Assistant Superintendent of Schools, if deemed necessary.

The Committee on Township System reported against making it obligatory, and after discussion the report was adopted.

A report against compelling teachers to attend Institutes was adopted.

The Committee on Normal Institutes reported in favor of memorializing the Legislature to appropriate \$2,000 to aid in the work of Normal Institutes for periods of not less than four weeks, and requesting the Normal School Regents to appropriate \$5,000 for Institute work the present year, which was adopted.

A resolution recognizing the Journal of Education as a powerful auxi'iary to the educational work, and recommending the legislature to authorize the sending of one copy to each school district, was adopted.

A resolution was also adopted recognizing in Superintendent Fallows an able, efficient and faithful laborer, and pledging him a hearty co-operation.

The report of a committee in favor of making third grade teachers' certificates good for one year, second for two years, and first for three years, was adopted.

12-(App.)-SUP. PUB. INS.

(Doc. 12)

Several other resolutions of minor importance were adopted, and there was a general consultation upon school-law points, and pithy speeches by those presest.

SAMUEL SHAW,

Secretary.

WISCONSIN STATE TEACHERS' ASSOCIATION.

NINETEENTH ANNUAL SESSION.

ASSEMBLY CHAMBER,
Madison, July 11, 1871—P. M.

The Association convened, pursuant to notice, at the above time and place, and was called to order by President Robert Graham.

After being welcomed by his Excellency, Governor Fairchild, in a neat and fitting address, to which the President responded, Prof. S H. Peabody of the Chicago High School was introduced, and entertained the Association by delivering a highly interestin lecture on "The Sun."

WEDNESDAY, July 12, 2871-9 A. M.

The exercises being opened by prayer and the singing of the Doxology, Vice President D. E. Holmes took the chair, and President Graham delivered the following:

ANNUAL ADDRESS.

Fellow Teachers of Wisconsin, and Friends of Education:—
To-day brings again our annual reunion. A kind Providence has watched over and preserved us another year. Gladly we greet each other—warm is the grasp and hearty the welcome, for the teachers' ranks scarcely admit of cold, calculating sorrows, or green-eyed jealousy. Sympathetic hearts are here; mutual joys and sorrows; mutual successes and failures. Happiness on the whole has outweighted the sorrow. This is my experience and yours, for often, very often, the darkest cloud of sorrow and sadness

brings brightest joy. And so we meet with hearty greetings, because they speak of heart work.

I am agreeably surprised to find so many present. Our wise Executive Committee decreed, after mature deliberation, that we must each and all pay our own bills. There were two or three reasons for this action;

- 1. The number of towns in the state inviting us to come were somewhat less than a score. And this is not the first experience we have had in finding it difficult to secure a place where the inhabitants were willing to entertain ladies free.
- 2. This Executive Committee are all "women's rights" men, and hence were in conscience bound to allow the ladies the right to pay—no distinction in regard to sex, race, color, or previous condition of servitude.
 - 3. The ladies, at the last association, expressed such desire.

We come as representatives of the educational interests of this commonwealth. Mighty responsibilities hang over us. We come to answer the query, "Watchman, what of the night?" From the general to the private, what report? What aggressive movements—what defensive? Have ignorance, prejudice and superstition, with their mighty hosts and bright array of banners, armed with the latest and most approved weapons, been successfully repulsed in any quarter? Has any dislodgement been made? What report from the skirmish-line of mixed schools? What from the inner posts of graded schools? What from the officers of the line—the principals of high schools? What from the staff of Generals, Brigadier and Major, of our normal schools and university? What from the General-in-Chief—the State Superintendent?

Are our free schools a success; do they accomplish what is desired? Are the people becoming more intelligent, industrious and happy? Are there mutterings of ill-feeling from any quarter towards our free schools? If so, what and when? What has been done for mixed schools? Have they a grade of study? If not, why? Are the teachers of mixed schools retained in any one school sufficient time to accomplish any well defined results? If not, what remedy? Have teachers of graded schools definite,

well-digested plans of what they desire to accomplish in any given time? Have they the proper views of the Philosophy of Education, what it is, and how attained? Is Normal training necessary to inspire a teacher with proper views concerning his work? If so, what has been done to secure it? Is Academic and higher instruction detracting from the true work of the Normal Schools?

Can methods of teaching be given in the Normal Schools unless Academic precedes? How shall a wide range of Normal training be secured? Is there in any of the High schools a course of study pointing to the University? If not, is it desirable that there should be such a course? How shall an influence be created favorable to higher education, with the University in view?

Are all the children of the State, between the ages of six and fourteen, regularly attending school? If not, what remedy? Is the Educational Journal what it should be—are we subscribers—are we contributors to its columns? If not, why?

Prof. Graham then proceeded to show what a true education is, quoting from Milton, Ruskin and Carlyle. He also discussed the subject of Normal schools, closing as follows: "Poor schools and poor teachers are in the majority. Multitudes of schools are so poor that I had almost said they were better closed. They add but little to the intellectual or moral power of any community. They afford the sad spectacle of ignorance engaged in the stupendous fraud of self-perpetuation at the public expense."

It is apparent that the wants of the country demand the establishment of a system of Normal schools, which shall embrace in their course of study only those branches taught in our district schools, with special training in methods and school management. In Massachusetts, with two years' course, only one-half of the students complete the course. In Illinois three-fourths remain only one year or less. In Kansas four-fifths leave by the expiration of the first year. If then, from one-half to four-fifths entering a school leave so soon, why should there not be an elementary course specially adapted to their wants?

I sincerely hope it may come within the province of this As-

sociation to co-operate in counsel and action with the Board of Regents of Normal Schools, now in session in the direction indicated.

The Normal Schools now in operation are doing a goood work. Their graduates are alike honoring themselves and the schools. May the fruits of their labor become more and more apparent.

In regard to compulsory education, Prof. G. quoted the States of Michigan and Texas in favor of the law; also, the opinions of Gov. Fairchild, Gen. Eaton, head of the National Bureau of Education, Superintendent Craig, State Superintendent of Pennsylvania, and several others, in favor of the law.

In regard to the inadequate salaries of county superintendents Prof. G. says;

"Superintendents are necessitated in many instances to resign their positions in consequence of inability to support their families. This ought not so to be. From personal acquaintance with a large number of county superintendents of this State, I know them to be faithful, discerning, honest, self-denying men, who are endeavoring with earnest purpose to combat ignorance and prejudice in whatever form they present themselves. They are doing a good work; and as no attempt was made the past winter to repeal the law creating the office, it is fair to conclude that the people are in a good degree satisfied with their work."

Of Teachers' Institutes, Prof. G., who has been in the employ of the Board of Normal Regents, engaged in holding institutes during the past year, says:

"Forty-four institutes have been held in this state during the last year, as per superintendent's report. Probably not less than fifty have been held this year, with an average attendance of sixty members, making in all 3,000 reached through this agency. Of the kind and amount of work done it behooves not me to speak. of one thing I am assured—it has done me good. I feel toned to a higher ideal of the teacher's work. With all its labor, toil and difficulty, some of the pleasantest memories of my life cluster around this institute work.

"This kind of work seems to be growing in favor with the people. The Legislature, last winter, made a special appropriation of \$2,000 to carry out this plan of Normal Institutes. These are to be held for not less than four weeks, and are under the direction of the State Superintendent and Board of Normal School Regents. Should these prove as successful as we believe they will, our teachers will find less excuse for work carelessly done; and superintendents who are possessed of vertebrae, can find relief from the sting of accusing conscience by relieving incompetent teachers of responsibility in connection with school work, without being obliged to close the school houses."

Teachers should be compelled to attend these institutes, without losing time, if their schools are in session, or furnish evidence of having attended a more extended course of training of a similar character.

Prof. Graham takes strong ground in favor of introducing music and drawing into all our schoools, upon which subject he is eminently sound, as our experience in the public schools of this city fully shows.

The speaker alluded as follows to the death of F. C. Pome-10y, late city superintendent of Milwaukee:

Since our last meeting we have been called upon to mourn the loss of an earnest educator in the person of F. C. Pomeroy, superintendent of the schools of Milwaukee. In the death of Mr. Pomeroy, the cause of public education has lost an able advocate, who devoted the best years of his life to the work he had undertaken. He brought to that work a mind mature in judgment and of high scholastic attainments. He sacrificed every other ambition, and to the last was found at the post of duty, with his armor on.

Prof. G. concluded as follows:—"But I must close, as I have already taxed your patience. In the review of the work done during the past year, there is much to cheer and encourage.

"To-day we have a Journal of Education worthy of the name, issued from the Department of Public Instruction. Its visits are hailed with delight—its pages perused with eagerness—a wel-

come visitor, diffusing not only the power of thought and geniality of soul of its able editors, but affording a medium of communication for the rich experience of practical educators, the methods of teaching, detail of organization, the proper development of the pupil in all that tends to make him healthy, intelligent and good. No teacher can afford to be without it.

"This association which has grown from the small number of half a score to as many hundred, is a power known and felt in the state. Earnest, strong minds brought it into existence, and such minds are still at work. The friends of free schools are neither loud nor boastful; they show no flaunting banner, but if necessity demands, the whole nation, including all tongues and nationalities, will rally around the flag of liberty and intelligence.

"Let your deliberations evince careful thought. We are here as workers—not as lookers-on. It is to be hoped that this meeting will not be obnoxious to the change of having done little or no good. If each one will feel that he has a personal interest in what is said and done, then good will be accomplished. If you have words to say worth saying and hearing, say them. Compare experiences; unite practice with theory.

"I have said no word of your responsibility; others will undoubtedly do this. You feel it. The schools centres on the teacher. The state has done much, and will do more to aid you to a better preparation.

"Ignorance and vice are the foes to be conquered. Their name is Legion; their sting is deadly; their power is almost omnipotent. Yet it is yours to meet such a foe. If faithful you will prevail; you shall conquer.

"Clearness of thought, purity of heart, earnestness of purpose, with a believing confidence in a kind and loving Father—sitting at the feet of our Great Teacher, our Elder Brother, leaning on Him and learning from Him—these will assuredly make you faithful and triumphant, and you shall in no wise lose your reward, which shall be two immortalities—one you shall carry with you when you go hence; the other shall remain impressing and reimpressing your life and character on mind and heart while time shall last."

On motion of Samuel Shaw, the address was referred for distribution to a committee consisting of W. D. Parker, D. E. Holmes and J. B. Thayer.

The following announcements were made by the President:

Committee on Enrollment—A. J. Cheney, D. McGregor, G. M. Bowen.

Assistant Treasurer-M. T. Park.

Professor Oliver Arey, of Whitewater Normal School, read a paper, entitled "Suggestions on the Economy of Mind Power," after which a recess of fifteen minutes was indulged in.

Business being resumed, Prof. S. S. Rockwood, of Milton, recited Whittier's "In School Days;" and Supt. Amos Whiting, of Trempealeau county, read an interesting paper on "Meutal Vision."

W. D. Parker, of the committee to whom was referred the President's Address, reported the following sub-committees:

On Normal Schools—O. Arey, S. S. Rockwood, George Beck. On Compulsory Education—W. D. Parker, G. S. Albee, J. Q. Emery.

On School Supervision—J. K. Purdy, T. D. Kanouse, D. G. Purman.

On Institute Work—S. Fallows, J. B. Pradt, O. Arey, R. Graham.

On Music and Drawing—D. E. Gardner, Mrs. M. E. Holmes, J. E. Burton.

On Necessity for Special Training—C. H. Allen, Alex. Kerr, W. C. Whitford,

On Obituary Notices—J. B. Pradt, J. K. Purdy, Marion V. Churchill.

Adjourned to 2 o'clock P. M.

AFTERNOON SESSION.

2 o'clock.

The Association being called to order, A. H. Hinman, of Chicago, presented the subject of Penmanship, giving the teachers

present some valuable hints with regard to conducting exercises in this much neglected branch of study.

Miss Mary E. Wadsworth, of Beaver Dam, read a paper on "The Education of Our Girls," which was listened to with great interest, and for which the authoress was highly commended by those who were fortunate enough to hear her.

After a recess of fifteen minutes, Miss Eliza Graves, of Kentucky, read a paper entitled "A Plea for Culture."

W. D. Parker, of the Committee on Compulsory Education, offered the following:

"The committee to whom was referred the matter of Compulsory Attendance of Children at School, have had the same under consideration, and beg leave to report; that

"Whereas, The efficiency of law being entirely dependent upon the co-operation of the people whose interests are to be served; and

WHEREAS, The people are not in sympathy with laws which permanently remove the children from their custody; therefore

"Resolved, That, in the opinion of the Wisconsin Teachers' Association, no law of compulsory attendance should be enacted."

This report was not considered as expressing the sense of the Association, its adoption was not agreed to, and

On motion of A. Earthman, the subject was referred back to the committee, who are to offer a more complete report at the next session of the Wisconsin Principals' Association.

After some discussion on "the Resources of the Association," by Messrs. Reynolds, Parker, Gaylord, Salisbury, Whitford and Purman, the Association adjourned to 8 o'clock P. M.

EVENING SESSION.

The exercises of the evening were introduced by a solo, sung by Prof. Brand, of Madison.

Prof. W. T. Phelps, of Winona Normal School, was then introduced, and delivered an able and exhaustive address on "The Problem of Universal Education and the Conditions of its Solution in our Country."

The Madison Brass Band then favored the Association with some choice music, after which the President announced the programme for the following day, and the Association adjourned till Thursday morning.

THURSDAY, JULY, 13, 1871—9 o'clock.

President Graham in the chair.

After the usual devotional exercises, and a solo by Prof. Brand, Alex. Kerr, of the committee on Course of Study, appointed last winter, made the following report:

COURSE OF STUDY FOR GRADED SCHOOLS.

First Year—First Term.—1, Counting from 1 to 20; 2, Special Drill Exercises to cultivate quickness and accuracy of perception preparatory to Reading; reading from charts, blackboard and slates, and to aid in teaching it; instruction and questions upon common things, consisting of domestic animals, articles of food, clothing, furniture, objects used in sport, labor, etc.; 3, Printing and Drawing; 4, Behavior and Habits of Order; 5, Singing and Physical Exercises.

Second Term.—1, Counting from 1 to 100; 2, Reading from Primer and Printing; 3, Oral Instruction on plants, illustrated by drawings of specimens to impress correct ideas of form, color and size; 4, Behavior and Habits of Order; 5, Singing and Physical Exercises.

Third Term.—1, Naming the figures used in the Reader; 2, First Reader begun, Printing; 3, Oral lessons on native animals, illustrated by pictures of the same; 4, Behavior and Habits of Order; 5, Singing and Physical Exercises.

SECOND YEAR—First Term.—1, Estimation of Distances; 2, First Reader completed; 3, Oral Spelling from Reader; 4, Writing by Principles; the small letters begun; 5, Oral Lessons on Flowers; pictures of specimens drawn with colored crayons; 6, Behavior and Habits of Order; 7, Singing and Physical Exercises.

Second Term.—1, Estimation of Weight; 2, Second Reader be-

gun; 3, Oral Spelling from Reader; 4, Writing by Principles; the small letters completed; 5, Oral Lessons on vegetable products; 6, Behavior and Habits of Good Order; 7, Singing and Physical Exercises.

Third Term.—1, Estimation of Time; 2, Second Reader continued; lessons written; 3, Oral Speaking from the Reader; 4, Writing by Principles; the capital letters begun; 5, Oral Lessons on the Human Body, and Draw ng in connection therewith; 6, Behavior and Habits of Order; 7, Singing and Physical Exercises.

Third Year—First Term.—1, Second reader completed, lessons written; 2, Oral spelling from reader, with simple rules for the use of the capital letters and punctuation marks found in the lesson; 3, Writing by principles, the capital letters completed and the figures; 4, Oral instruction on insects, drawings of specimens; 5, Morals and manners; 6, Singing and calisthenics.

Second Term.—1, Third reader begun, lessons written; 2, Oral spelling from reader; 3, Oral Geography, points of compass, school-house, grounds and surrounding, soils and rocks, map drawing by scales; 4, Arithmetic, addition and subtraction, oral and written work, taught with objects; 5, Morals and manners; 6, Singing and calisthenics.

Third Term.—1, Third reader continued, lessons written; 2, Oral spelling from reader; 3, Oral geography, the section, the town, its natural divisions, minerals, vegetable and animal productions, occupations of the people, and history, map by sections; 4, Arithmetic, multiplication and dvision, oral and written work, taught with objects; 5, Morals and manners; 6, Singing and calisthenics.

Fourth Year—First Term.—1, Third reader continued; 2, Written spelling from reader; 3, Oral geography, the county, its natural divisions, productions, occupations of the people, cities and villages, traveling facilities, history, map by sections and townships; 4, Primary arithmetic begun, oral instruction in notation and numeration; 5, Impromptu composition; 6, Morals and manners; 7, Singing and calisthenics.

Second Term.—1, Third reader continued; 2, Written spelling from reader; 3, Oral geography, the state, its important natural and artificial divisions, description of lands, productions, occupations of the people, cities, traveling facilities, history, map by townships and counties; 4, Primary arithmetic completed, oral instruction in notation and numeration; 5, Impromptu composition; 6, Morals and manners; 7, Singing and calisthenics.

Third Term.—1, Third reader completed: 2, Written spelling from reader; 3, Geography of United States begun; map drawing by construction lines; 4, Intellectual and written arithmetic, addition and subtraction; 5, Impromptu composition; 6, Morals and manners; 7, Singing and calisthenics.

FIFTH YEAR—First Term.—1, Fourth reader begun; 2, Written spelling from reader; 3, Writing copies with pen and ink; 1, Geography of United States completed; map drawing by construction lines; 5, Intellectual and written arithmetic; multiplication and division begun; 6; Impromptu composition; 7, Morals and manners: 8, Singing and calisthenics.

Second Term.—1, Fourth reader continued; 2, Written spelling from reader; 3, Writing copies with pen and ink; 4, United States history begun; 5, Intellectual and written arithmetic; division completed; greatest common divisor; least common multiple; 6, Impromptu composition; 7, Morals and manners; 8, Singing and calisthenics.

Third Term.—1, Fourth reader continued; 2, Written spelling from reader; 3, Writing copies with pen and ink; 4, United States history continued; 5, Intellectual and written arithmetic; reduction, addition and subtraction of fractions; 6, Impromptu composition; 7, Morals and manners; 8, Singing and calisthenics.

Sixth Year—First Term.—1, Fourth reader continued; oral grammar; 2, written spelling from reader; 3, Writing copies with pen and ink; 4, United States history completed; 5, Intellectual and written arithmetic; multiplication of fractions; division begun, 6, Impromptu composition; 7, Morals and manners; 8, Singing and calisthenics.

Second Term.—1, Fourth reader continued; oral grammar; 2, Written spelling from reader; rules for spelling; 3, Writing copies with pen and ink; 4, Geography; mathematical; forms of government; North America; map drawing by construction lines; 5, Intellectual and written arithmetic; division of fractions completed; decimals; 6, Impromptu composition; 7, Morals and manners; 8, Singing and calisthenics.

Third Term.—1, Fourth reader continued; oral grammar; 2, Written spelling from reader; abbreviations; 3, Writing copies with pen and ink; 4, Geography; South America and Africa; map drawing by construction lines; 5, Intellectual and written arithmetic; decimal currency; compound numbers begun; 6, Impromptu composition, with special reference to habits of speech; 7, Morals and manners; 8, Singing and Calisthenics.

SEVENTH YEAR—First Term.—1, Fifth reader begun; oral grammar; 2, Written spelling from reader; 3, Writing copies with pen and ink: 4, Geography; Europe; map drawing by construction lines; 5, Intellectual and written arithmetic; compound numbers completed; 6, Impromptu composition; with special attention to habits of speech; 7, Morals and manners; 8, Singing and calisthenics.

Second Term.—1, Fifth reader continued; 2, Written spelling from reader; 3, Writing copies with pen and ink; 4, Geography; Asia and Oceanica; map drawing by construction lines; 5, Intellectual and written arithmetic; percentage begun; 6, Grammar; etymology begun; impromptu composition; parsing; 7, Morals and manners; 8, Singing and calisthenics.

Third Term.—1, Fifth reader continued; 2. Writing spelling from reader; 3, Writing copies with pen and ink; pencil drawing; 4, General history begun; ancient geography; 5, Intellectual and written arithmetic; percentage continued; oral instruction in business forms; 6, Grammar; etymology continued; impromptu composition; parsing; 7, Morals and manners; 8, Singing and calisthenics.

Eighth Year—First Term.—1, Fifth reader continued; 2, Written spelling from reader; 3, Book keeping; single entry;

pencil drawing; 4, General history continued; mediæval geography; 5, Intellectual and written arithmetic; percentage completed; ed; equation of payments; 6, Grammar; etymology completed; impromptu composition; parsing; 7, Morals and manners; 8, Singing and calisthenics.

Second Term.—1, Fifth reader continued; 2, Written spelling from reader; 3, Writing copies with pen and ink; pencil drawing, 4, General history completed; 5, Intellectual and written arithmetic; ratio and proportion; partnership; alligation; 6, Grammar; syntax begun; composition writing; analysis; 7, Morals and manners; 8, Singing and calisthenics.

Third Term.—1, Fifth reader completed, special drill exercises in the elementary sounds; 2, Written spelling from reader; 3, Writing copies with pen and ink; 4, Geography reviewed; 5, Intellectual and written arithmetic completed; 6, Grammar; syntax completed; composition writing; analysis; 7, Morals and manners; 8, Singing and calisthenics.

COURSE OF STUDY FOR PUBLIC HIGH SCHOOLS.

FIRST YEAR—First Term.—1, Language, Latin, French or German; 2, Mathematics, arithmetic reviewed; 3, Natural science, physical geography; 4, English, reading and spelling; 5, Rhetoric, essays, declamations, discussions, recitations, impromptu compositions, oral exercises in narration and description.

Second Term.—1, Language, Latin, French, or German; 2, Mathematics, algebra; 3, Natural science, physical geography; 4, English, reading and spelling; 5, Rhetoric, as in No. 5, above.

Third Term.—1, Language, Latin, French or German; 2, Mathematics, algebra; 3, Natural history, natural history of animals; 4, English, reading and spelling; 5, Rhetoric, as in No. 5, first term.

SECOND YEAR—First Term.—1, Language, Latin, French or German; 2, Mathematics, geometry; 3, Natural science, physiology; 4, English, reading and spelling; 5, Rhetoric, essays, declamations, discussions, recitations, impromptu compositions, oral exercises in narration and description.

Second Term.—1, Language, Latin, French or German; 2, Mathematics, geometry; 3, Natural science, natural philosophy; 4, English, reading and spelling; 5, Rhetoric, as in first term.

Third Term.—1, Language, Latin, French or German; 2, Mathematics, trigonometry; 3, Natural science, natural philosophy continued; 4, English, reading and spelling; 5, Rhetoric, as in first term.

THIRD YEAR—First Term.—1, Language, Latin, French or German; 2, Politics, civil government; 3, Natural science, chemical physics; 4, English literature; 5, Rhetoric, as in first and second years.

Second Term.—1, Language, Latin, French or German; 2, Commercial science, book-keeping; 3, Natural science, chemistry; 4, English, philosophy of rhetoric; 5, English literature; 6, Rhetoric, as above.

Third Term.—1, Language, Latin, French or German; 2, Natural science, botany; 3, Politics, political economy; 4, English literature; 5, Rhetoric, as above.

FOURTH YEAR—First Term.—1, Language, Latin, French or German; 2, History, universal history reviewed; 3, Metaphysics, mental philosophy; 4, English literature; 5, Rhetoric, exercises continued as before.

Second Term-1, Language, Latin, French, or German; 2, Physics, astronomy; 3, Metaphysics, mental philosophy; 4, English literature; 5. Rhetoric, as above.

Third Term.—1, Language, Latin, French, or German; 2, Natural science, geology; 3, Metaphysics, moral philosophy; 4, Rhetoric, preparation and rehearsal of graduating essays and orations.

Lessons in drawing throughout the four years.

This report was accepted, and the discussion upon it postponed till the session of the Wisconsin Principals' Association.

Gov. Fairchild here made his appearance in the Assembly Chamber, and invited the members of the Association to be present at a reception to be held at his house at 7 o'clock P. M.

Professor S. H. Carpenter, of the State University, then read an able paper on "What and How to Read."

Singing—"All Hail the Power of Jesus' Name," by all present.

A Poem, composed for the occasion, entitled "Cui Bono," was read by its authoress, Mrs. H. E. G. Arey, of the Whitewater Normal School.

Recess of fifteen minutes; after which

S. R. Alden, of Whitewater Normal School, read the two poems: "Darius Green and his Flying Machine," and "The Bugle Song."

The committee on Finance was announced by the chair as follows: T. D. Kanouse, J. J. Lloyd, Hosea Barns.

Professor M. P. Cavert delivered an address upon "Music; its Extent and Influence."

The time for the election of officers having arrived, on motion a formal ballot was taken for President, with the following result:

Whole number of votes cast, 138; necessary to a choice, 70. Of this number Samuel Shaw received 93; Duncan McGregor received 24; Mrs. M. E. Holmes received 12; B. M. Reynolds received 9.

Samuel Shaw having received a majority of all the votes cast, was declared elected President of the Wisconsin Teachers' Association for the ensuing year.

In order to expedite business, the Chair announced the following:

Committee on Nominations—J. Q. Emery, T. D. Kanouse, T. C. Chamberlain.

Adjourned to 2 P. M.

AFTERNOON SESSION.

2 o'clock.

The chair appointed the following

Committee on Resolutions—S. Shaw, S. S. Rockwood, W. D. Parker.

J. K. Purdy, of the Committee on School Supervision, made - the following report, which was adopted:

13—(App.) STP. Pub. Ins.

(Doc. 12)

- "Your committee to whom was referred that part of the president's address relating to school supervision, recommend the adoption of the following resolution as the sense of this association:
- "Resolved, That we heartily indorse the present system of supervision by county superintendents;
- "That its inefficiency in certain localities is due to the fact that the salaries paid are insufficient to secure the necessary talent; or, that when capable men are obtained, they are frequently compelled to devote a part of their energies to other employments in order to support themselves and families; and thus our schools are deprived in a greater or less degree, of that thorough supervision which they demand.

"J. K PURDY,

"T. D. KANOUSE,

"D. G. PURMAN,

"Committee."

Judge Knapp, of Madison, read a somewhat lengthy paper upon "The Isotherms of Wisconsin."

J. L. Pickard, superintendent of the Chicago schools, delivered an address on "The Hindrances to the Success of the Teacher," after which he made some extempore remarks, paying a fitting tribute to our lamented chief, the late A. J. Craig.

After a recess President Whitford, of Milton College, read a paper, entitled "Conditions of Success in the School Room."

This address, being full of practical hints, was attentively listened to; as was also the essay by Mrs. M. E. Holmes, of Berlin, on "Sculptors."

During the business session which then followed, the several committees made reports as follows:

- "J. Q. Emery, of the Committee on Nominations offered the following:
- "For Vice Presidents.—D. McGregor, Platteville; C. F. Viebahn, Sauk City; Mrs. H. E. G. Arey, Whitewater.
 - " For Secretary.—A. Earthman, Reedsburg.
 - " For Treasurer.—C. M. Treat, Clinton.
 - "For Executive Committee .- W. D. Parker, Janesville; A.

Everett, Oshkosh; W. A. De La Matyr, Elkhorn; W. C. Whitford, Milton; Alex. Kerr, Madison.

"J. Q. EMERY,
"T. C. CHAMBERLIN,
"T. D. KANOUSE,
"Committee."

Accepted, and the secretary instructed to cast the ballot for the association. The above nominees were then declared elected for the ensuing year.

- T. D. Kanouse, of the committee on finance, offered the following report, which was adopted:
- "Your committee have received and audited the several bills presented, and find the aggregate amount to be \$128.65, which includes not only the expenses attending the the present session, but also a balance of \$4.00, unpaid for session of 1870.
 - "The treasurer's account shows:

"Balance on hand at close of last session	\$87 9	07 50
"Total" "Expenses of present session	\$171 128	57 65
"Balance on hand	\$ 42	92
"T. D. KANOUSE, "HOSEA BARNS, "J. J. LLOYD, "Commi	ittee '	

J. Q. Emery, of the committee on Honorary Membership, recommended the following persons as honorary members of the Association:

President W. T. Phelps, Winona.

Judge J. G. Knapp, Madison.

Prof. S. H. Peabody, Chicago.

Miss M. E. Simmons, Oswego.

Miss Eliza Graves, Kentucky.

Prof. M. P. Cavert, Illinois.

Gov. Lucius Fairchild and lady, Madison.

Dr. A. H. Peabody, Cambridge.

Prof. J. L. Pickard, Chicago.

Gen. David Atwood, Madison.

Adopted.

A. Earthman offered the following substitute for Article 2 of the Constitution:

"This Association shall consist of school officers, friends of education, and persons engaged in teaching in this State, who shall pay annually as follows: Male members one dollar, and female members fifty cents each."

Laid over for action at the next annual meeting.

- O. Arey, of the Committee on Normal Schools, presented the following report, which was adopted:
- "Your committee beg leave to report that it has been recommended by them, and accepted by the Board of Normal Regents, to attach to each of the Normal Schools of the State an elementary course of study comprising one year; that this course shall commence each year with an Institute course of six or eight weeks; that it shall have in view the better preparation of teachers for our district schools; and that those who pass successfully this one year's course, shall receive a certificate of attendance.

"O. AREY,
"S. S. ROCKWOOD,
"GEO. BECK,
Committee."

- J. B. Pradt, of the committee on Obituaries, offered the following:
- "Your committee, as well as most of the members of the Association, cannot but remember that when we assembled a year ago, we were in sorrow and sadness at the recent loss of one who had long been identified with the educational work of the state. Little did we anticipate that a few days later another prominent worker in the field would be stricken down.
- "Fennimore Cooper Pomeroy was born November 4, 1813, in Cooperstown, N. Y. He was the son of Dr. George Pomeroy of that place. Mr. Pomeroy, it is understood, was for three years student in Darmouth. Of his early life, other than this, your committee are not informed; but he came to Milwaukee while yet a young man, and was for some time engaged in the business of druggist. He was married in 1840, to Miss Stella A. Woolsen, of Ciaremont, N. H.

"After a brief residence in Milwaukee, he spent some ten years in the county of Green Lake, engaged in the quiet pursuits of country life. When prosperity had in some measure crowned his efforts, his earthly goods were in a single hour swept away by the devouring element of fire. With dauntless energy, he at once set about repairing his shattered fortunes, when severe and protracted illness laid its hand heavily upon him; and when at length permitted to return to active life, he had, as it were, to begin life anew.

"Returning to Milwaukee, he became principal of the Third Ward School. After several years of faithful and zealous work as a teacher, he was appointed City Superintendent in 1865. In this difficult position, it is great praise to say, that he not only well sustained himself, but gave general satisfaction. The schools of the city, in spite of many adverse circumstances, prospered under his supervision, and it was the general feeling, that in his sudden and unexpected removal, the cause of public edudation sustained a severe loss.

"Mr. Pomeroy died after three weeks illness, on the 25th of August last, leaving a wife and three children to mourn his departure.

"Mr. Pomeroy gave you the impression of a man of modesty and courtesy, but of firmness, and devoured by no insatiate ambitions. He was unobtrusive in the expression of his opinions, but accustomed to think for himself. He was faithful and conscientious as a teacher and superintendent, upright and hononorable as a citizen, tender and true as a man.

"That this is a just portraiture of his character, is sufficiently evident from the resolutions adopted by the School Board of Milwaukee immediately after his decease.

"Your committee feel that it is wise for us all to cherish the memory of those who have gone; and that the best tribute we can pay to their memory, is so to live and act ourselves, as to show that we are influenced and elevated by good examples.

[&]quot;J. B. PRADT,

"J. K. PURDY,

"M. V. CHURCHILL,

"Committee."

- D. E. Gardner, of the committee on music and drawing, presented the following which was adopted:
- "Resolved, That instruction in the elements of vocal music should have a place upon the daily programme of each department of every graded school; and that, as preparatory to its introduction into the mixed schools, we recommend that special instruction be given teachers in the elements of this branch at teachers' associations and institutes.
- "Drawing.—Inasmuch as we consider the subject of Drawing of primary importance, and believe that a knowlege of its principles will great aid in penmanship, and may be profitably applied to many branches taught in our schools, and that it has a strong influence in forming an exact and systematic mind;
- And furthermore, knowing that some of the most progressive States of our Union have already adopted it as a requisition for teachers' certificates; therefore,

Resolved, That in our judgment drawing should be introduced in every school in our state—graded and mixed—and that we recommend an appropriate place for it upon the programmes of our institutes and associations.

"D. E. GARDNER,
"Mrs. M. E. HOLMES,
"J. E. BURTON,
"Committee."

- C. H. Allen, of the Committee on the Necessity for Special Training, offered the following:
- "Your committee to whom was referred so much of the Presidents address, as pertained to the necessity for special training as a preparation for the work of teaching, beg leave to submit the following report:
- "We find in the address the following questions upon this subject:
- "'Is normal training necessary to inspire a teacher with proper views concerning his work? If so what has been done to secure it? Is academic and higher instruction detracting from the true work of normal schools? Can methods of teaching be given in the normal schools unless academic precedes? How shall a wide range of normal training be secured.'

"To the first of these: 'Is normal training necessary to inspire a teacher with proper views concerning his work?' We reply, that in the opinion of your committee, such training is not absolutely necessary for the purpose specified; but it is extremely desirable.

"To the second: 'If so, what has been done to secure it?' Normal schools have been established; Institutes are held; many normal classes are kept open in the state during a part or the whole of the year.

"To the third: 'Is Academic and higher instruction' (supposed to mean in the Normal schools) 'detracting from the true work of Normal schools?' We fear that is the tendency.

"To the fourth: 'Can methods of teaching be given in the Normal school, unless Academic (training) precedes it?' Teachers must know what they are to teach before they can know how to teach it. The Academic instruction need not necessarily be received in a Normal school, though, if circumstances are favorable, it may be profitably given there. Theory and Practice, like some gasses, combine best in their nascent state.

"To the fifth: 'How shall a wide range of normal training be secured?' By using faithfully those means which the State has already provided, and by obtaining more as fast as possible; by putting into the Normal schools men who believe in the necessity and practicability of such work; and by so conducting the Institutes as to awaken a desire for a wider course of training, and by recognizing in its fullest extent that there is such a thing as a science of Instruction and a profession of Teaching.

"C. H. ALLEN,
"ALEX. KERR,
"W. C. WHITFORD,
"Committee."

Adopted.

Adjourned to 8 P. M.

EVENING SESSION.

8 o'clock.

The exercises were introduced by the singing of Doxology.

Rev. S. Fallows, State Superintendent of Public Instruction, delivered a brief address upon "The Relation of the College to the Common School," showing that there should be, and there is, no antagonism between the two; that they are parts of one harmonious whole; and that both aim at the same result.

After the close of this address, Prof. A. H. Peahody, of Harvard University, was introduced, and delivered a lecture upon "Words and their Uses." The distinguished lecturer started out with the statement that words are not made; they grow; traced the history of many words commonly used; instanced many words to show how much christianity has changed their original meaning; alluded to the poetry contained in some of the most common words; and closed by an earnest appeal in behalf of the study of the Latin language.

Sam. Shaw offered the following resolutions, which were adopted:

- "Resolved, That to the proprietors of hotels and other places of entertainment in Madison, we return our thanks for reduced rates of accommodation.
- "Resolved, That the members of this association tender their united thanks to Gov. Fairchild, the teacher's friend, for the use of the Assembly Chamber; and that they shall long remember the pleasant hour spent in the company of himself and his estimable lady.
- "Resolved, That the thanks of this association are hereby tendered to Prof. S. H. Carpenter, Dr. A. P. Peabody, Prof. W. F. Phelps, Prof. J. L. Pickard, and Prof. M. P. Cavert, for their able and profitable lectures during the present session.
- "Resolved, That we thank the band, and all other musicians whose sweet tones have cheered us and lightened our labors.
 - "Resolved, That our thanks are due to the several railway and

steamboat companies, for the commutation of fares upon their respective lines.

"S. SHAW,
"S. S. ROCKWOOD,
"W. D. PARKER,
"Committee."

At the close of the reading of the resolutions, Pres. Graham declared the Nineteenth Annual Session of the Wisconsin State Teachers' Association adjourned sine die.

ROBERT GRAHAM,

President.

Albert Earthman, Secretary.

# QUARTERMASTER GENERAL'S REPORT.

. • • • .

## ANNUAL REPORT

OF THE

# QUARTERMASTER GENERAL

OF THE

STATE OF WISCONSIN,

For the Fiscal Year ending September 30, 1871.

To His Excellency, Lucius Fairchild,

Governor of the State of Wisconsin:

GOVERNOR:—I have the honor to transmit herewith the report of this Department for the year ending September 30, 1871.

Very respectfully,

ROBERT MONTEITH,

Quartermaster General.

## REPORT.

Head Quarters, State of Wisconsin,

Office of Quartermaster General,

Madison October 1, 1871.

#### Governor:-

The transactions of this department for the year ending September 30, 1871, have consisted merely of the issue of arms and accountrements necessary for the equipment of the several militial companies organized during the year.

The number of arms and accoutrements, ordnance and ordnance stores on hand, the number received and issued, from what source received and to whom issued, and the amount received from the sales of unserviceable arms is shown in an appendix hereto annexed, and marked from "A." to "H."

The case for the preservation of the regimental battle flags, authorized by chapter 83, general laws of 1870, has been placed in the Historical rooms, with the flags of each regiment properly labeled and placed therein.

In carrying out the details of this department, I have received very valuable assistance from Capt. A. R. Macdonald, State Armorer.

I am, Governor, very respectfully,

Your obedient servant,

ROBERT MONTEITH,

Quartermaster General.

## **APPENDIX**

## APPENDIX "A."

## Showing the number of Arms on hand September 30, 1871.

English carbines	
Garibaldi	2,017
Belgian	607
Austrian	267
Dresden	228
Yager rifles	190
Old muskets altered to Percussion (caliber 59)	291
Harper's Ferry rifles, with bayonets	40
Old smooth bore muskets	<b>600</b>
Springfield and Enfield rifles	<b>595</b>
Springfield B. L. R	290
Total	5, 165

## APPENDIX "B."

Showing receipts of Arms from different Militia Companies and citizens in the State during 1871.

Waupaca Reserve Guard, Waupaca county— Sixty Garibaldi rifle muskets, with accourrements complete.

## From citizens—

From Mr. Cotzhausen, of Milwaukee—forty English carbines and accourrements.

## APPENDIX "C.',

Showing Arms and Accountrements issued to citizens during the year 1871.

Feb. 25th, 1871—Issued to the president of the St. Croix Collegiate Institute, River Falls, Wis.:

40 Austrian rifle muskets, with accoutrements complete.

5 English art'y carbines,

March 15th, 1871—Issued to the State Prison Commissioner: 10 B. L. R. muskets.

Sept. 22d, 1871—Issued to Mr. D. G. Purman, at State Normal School, Platteville, Wis.:

75 Belgian rifle muskets, with accoutrements complete.

## APPENDIX "D,"

Showing Arms, Accountements, etc., issued by the Governor, to the following Companies:

Oct. 20, 1870.—Issued to Capt. James M. Bull, commanding "Middleton Guards," Dane Co.:

65 Springfield Rifle Muskets, with accoutrements complete.

Oct. 28, 1870.—Issued to Capt John P. Strack, commanding "Milwaukee Black Yagers," Milwaukee:

65 Springfield Rifle Muskets, with accoutrements complete.

June 17, 1871.—Issued to Capt. Thos. G. Chapman, commanding "Washington Guards," Milwaukee:

65 Springfield Rifle Muskets, with accoutrements complete.

June 17, 1871.—Issued to Capt. Robt. Bell, commanding "Bell City Guards," Racine Co.:

80 Springfield Rifle Muskets, with accoutrements complete.

Sept. 22, 1871.—Issued to Capt. C. R. Barrager, commanding "City Guards," Waupun:

67 Belgian Rifle Muskets, with accoutrements complete.

Sept. 22, 1871.—Issued to Capt. C. R. Wertz, commanding "Watertown Guards:"

75 Belgian Rifle Muskets, with accoutrements complete.

#### APPENDIX "E."

Showing amount of Ordnance and Ordnance Stores, issue during 1871.

Dec. 30, 1870.—Issued to Capt. Richard Rooney, "Sheridan Guards:"

3 boxes Metatic Cartridges.

June 18, 1871.—Issued to the commanding officer "Milwaukee Light Artillery:"

2 Caissons.

## APPENDIX "F."

Showing number of cannon owned by the state and in whose possession.

- 2 light 12 pounders with field carriages and appendages complete, in possession of Capt. A. O. Babcock, "Trojan Volunteer Battery," Walworth Co., and Capt. John Fitzgerald, "Richland Center Light Artillery," Richland Co.
- 2 6-pounders in possession of Capt. Charles May, "Milwaukee Light Artillery."
- 1 6-pounder in possession of citizens of Dodgeville, Iowa Co. (No bond.)
- 1 6-pounder in possession of Col. John Hancock, Oshkosh, Winnebago Co.
- 1 6-pounder in possession of G. N. West, Brandon, Fond du Lac Co.
- 1 6-pounder in possession of Capt. John Grindell, Platteville, Grant Co.
- 1 6-pounder (trophy) in possession of Hon. J. M. Taylor, Mayo of Fond du Lac, Fond du Lac Co.
- 1 6-pounder in possession of Edward Hodges, Elkhorn, Walworth Co.
- 1 12-pounder Howitzer in possession of Capt. Washington Ashton, "Douglas County Guards," Superior, Douglas Co.
- 2 12-pounders on hand at state armory, one being unserviceable. Total 13.

## AEDENDIX "G."

Showing Ammunition on hand in 1870, and amount issue the year.	d dur	ing
Canister and round shot for 6-pounderround Round shot and shell for 2-pounderrounder	nas	59 14
Elongated ball cartridges on hand 1870.

## FIRST ANNUAL REPORT

OF THE

# COMMISSIONER OF IMMIGRATION

OF THE

STATE OF WISCONSIN,

For the Year 1871.

To. His Excellency, the Governor of the State of Wisconsin:

I was appointed to the office of Commissioner of Immigration for this state, under chapter 155 of the general laws of 1871, and entered upon the discharge of my duties as such on the 12th day of March last. I immediately commenced maturing plans for carrying out the intention as well as the letter of the law. The short time that I have been acting has as yet scarcely been sufficient to lay the foundation for future operations, much less to show any material results to the state. Another drawback has been that the season of immigration commenced almost immediately upon my accession to office, and as I am required under the law to act as local agent in Milwaukee, it took all my time to perform that duty, and I had to neglect, for the time being, the duties of Commissioner proper.

As soon as it was possible for me to do so, I appointed three men in each county, as directed by law, to serve as a committee for the purpose of gathering and forwarding to me information as to the inducements offered by their county to immigrants. The following were the committees:

#### COMMITTEES.

Name.	County.	Post Office Address.
C. A. Capron David N. Bacon A. O. Holm	Adams	Friendship.
John W. Bell	Ashland	La Pointe.
W. J. Smith	Barron	Barron.
J. D. Cruttenden	Bayfield	Bayfield.
G. W. Watson	Brown	Green Bay.
Peter Schnug	Buffalo	Alma.
W. H. Peck	Burnett	Grantsburg.
Arthur Connally	Calument	Chilton.
Michael Hall Fred. C. Dahl Levi Martin	Chippewa	Chippewa Falls.
W. T. Hutchinson F. D. Lindsay R. Dewhurst	Clark	Neilsville.
Thos. Yule	Columbia	Portage City.
Nicholas Smith	Crawford	Prairie du Chien
J. H. Clark	Dane	Madison.
Wm. Œstriach	Dodge	Juneau.

Name.	County,	Post Office Address.
Peter Zenner  J. P. Simon  C. A. Masse	Door	Sturgeon Bay.
D. G. Morrison	Douglas	Superior.
John Kelly, Jr	Dunn	Menomonee.
Samuel C. Putnam	Eau Claire	Eau Claire.

Name.	County.	Post Office Address.
Edwin Sellick	Waupaca	Waupaca.
B. S. Williams F. B. Coggswell Geo. Sexton	Waushara	Wautoma.
R. J. Judd	Winnebago	Oshkosh.
Lemuel Kremmer H. H. Crampton L. P. Powers	Wood	Grand Rapids.

I sent the following circular, together with the printed questions therein mentioned, to each member of the committees:

"Office of Commissioner of Immigration,

"Milwaukee, Wis., ———, 187.

"		<del></del> ,	<del></del> ,	W	is.	:
---	--	---------------	---------------	---	-----	---

- "'SECTION 9. The commissioner shall have authority to appoint in each county a committee, consisting of three members, to assist him in the performance of his duties, and may remove any of the members of such committee and appoint others up their stead.
- "SECTION 13. It shall be the duty of the county committee to make duplicate lists of the names and post office address of such friends and relatives of the inhabitants of their respective localities as are living in the eastern states and in Europe, and to retain one list and send the other list to the commissioner.
  - "'Section 11. The commissioner shall forward to the county

committees a sufficient amount of pamphlets to supply all the persons named in the foregoing lists, with postage sufficient to carry them to their final destination, and the county committee shall forward the pamphlets by mail to the persons named in their lists, or use other means to distribute said pamphlets, if deemed best.

- "'SECTION 12. The county committee shall act under the instruction of the commissioner, and shall report to him such information in regard to their respective counties as he may desire, to enable him to perform his duties under this act.
- "'SECTION 13. Each county committee shall have the right, when so ordered by the board of supervisors of their county, to cause to be printed, information setting forth the advantages of their county and localities therein, and to have such printed information attached to, and forwarded by mail with the pamphlets sent to their county, the expense of which shall be chargeable against said county.
- "'SECTION 14. The county committees shall be entitled to receive no compensation from the state for their service, but their expenses for postage shall be allowed by the commissioner and included in his account therefor.'
- "I hope that you will earnestly co operate with me, that the objects of the law may be faithfully carried out. It is essential that we gather into a compact form accurate information concerning the resources of the State. I have printed on the enclosed blanks some questions, which I trust you will answer and return to me at your earliest convenience. Should there be too small space for answering some of them, you can write on a separate sheet, merely noting the number of the question. Please add also any information you may have touching matters of importance not mentioned in the questions.
- "I believe this State offers unusual inducements to capital and labor. She is excelled by none of her sister States in natural advantages, and if proper efforts are made, her resources will be greatly developed and her wealth and prosperity vastly increased.
  - "If you prefer to do so, you may simply send to me the l

of names of those to whom you wish pamphlets sent, and I will take upon myself the work of mailing them to the proper persons. This will save some delay in forwarding.

"Hoping that you will give this subject attention at once, by advising me fully of the resources, with the general and special advantages of your county,

"I remain, yours respectfully,

"O. C. JOHNSON,

"Commissioner of Immigration for the State of Wisconsin."

Many of these committees have responded in a full and satisfactory manner, whilst others have made no returns whatever. The reports of the committees are given herewith, and as to those counties from which I have no reports, I have availed myself of other sources of information, principally from the report of Prof. J. W. Hoyt, Secretary of the State Agricultural Society, for 1870. I have also by personal enquiries and by writing to parties outside of the committees, obtained much valuable information. I have found, however, that the surest and most satisfactory method of getting information, is by personal observation and personal inquiry of parties who have themselves been over the country, such as surveyors, who have taken notes and are thus able to state from positive knowledge. I have visited in this way several of the northern counties of the state, and have obtained fuller and more reliable information than it would otherwise be possible to do. I hope during the coming year to be able to visit all the newer parts of the state, even the most inaccessible, and thus get thoroughly informed as to the many and varied advantages that our state offers, and consequently be able to present them to the outside world in their true light.

One principle I have laid down for my guidance, viz.: to give the facts just as they exist, unvarnished and uncolored. I have noticed the pernicious practice indulged in by many railroad and land companies, and even those who represent states, of giving glowing accounts of their lands or states, that do not exist even in the imagination of the writers. This has become so common that many put little or no faith in documents gotten up for the

purpose of inducing immigration. Consequently the practice is poor policy, as well as wrong in principle, and I have made special efforts that all information sent forth from my office shall be of the most reliable and trustworthy character.

When I entered upon the duties of my office, I received from the out-going Board of Immigration about 3,000 pamphlets in the English language, 4,000 in German, 2,000 in Norwegian and a few each in French and Holland. These are now nearly all distributed.

I have come to the conclusion that efforts to obtain settlers for this state should be directed to the European countries rather than to the Eastern states of our own country. Our state is heavily timbered, and not so easily brought under cultivation as the prairies of our neighboring states, and it needs the industrious, hard-working yeomanry of the old world, men who are able and willing to fell the huge trees and perform other hard labor necessary in clearing the land. Though the land requires more labor at first, the timbered regions hold forth other advantages that a prairie country cannot offer, to more than counterbalance this drawback, chief among which is constant employment for the laborer at high wages, which is never wanting, and this is a very important item to the immigrant without means.

Having come to the conclusion above mentioned, my efforts have been directed principally toward the dissemination of correct information concerning our state in Europe. The Board of Immigration had already had under consideration the plan of getting the pamphlets in the foreign languages printed in Europe, and I have decided to follow out that plan. Its advantages are various and important. In the first place is its saving of expense; for printing can be obtained there for about one-third the price that has been paid here. Then there is perhaps a still greater advantage in distributing the pamphlets. It is quite impossible to distribute from here through the mails in foreign countries, for it is not practicable to obtain the names of parties to whom to send, nor could such be obtained as it would be proper or profitable to send to. To print here and ship there in bulk, would also give the additional charge of freights, which is no inconsid-

erable item. Better arrangements for distributing can also be made by getting the printing done there, for the publisher then becomes to a considerable extent an interested party.

Five thousand pamphlets, with a map of the state, have been published in Belgium, in the French language, under the supervision of the Hon. A. S. Chettain, U. S. Consul at Brussels, all of which have been thoroughly distributed. Accompanying this report, I give extracts of a letter from Mr. Chettain, wherein he gives it as his opinion that the work will prove of great advantage to the state.

Ten thousand pamphlets have also been printed in Germany, under the direct supervision of Mr. J. A. Becher, of Milwaukee, a former member of the Board, who is now in that country, and who will make arrangements for the thorough distribution of the same, and of all others that may be printed in the future. I have also corresponded with parties in other countries, but have as yet made no definite contracts.

I have had many letters of enquiry, as well from the eastern states as from different countries in Europe, all of which have been promptly answered. This kind of work is greatly increasing, and will serve in no small degree, if properly attended to and fostered, to unfold the advantages of the state.

Below is a statement of the expenses incurred by me up to December 1:

Printing one thousand pamphlets in Germany in the German		
language	<b>\$</b> 310	00
Printing five thousand pamphlets, including maps, in Belgium,	_	
in the French language	299	00
Advertising	64	51
Freight and express charges paid on pamphlets shipped	63	40
Postage on pamphlets sent by mail	123	74
Twenty-five thousand maps for pamphlets	<b>500</b>	00
Salary to agent at Chicago (4 months)	300	00
Printing	75	44
One badge	2	<b>50</b>
Boxing pamphlets	6	25
Wrapping paper and twine	4	30
Total	\$1,749	14

The following is the report of the number of immigrants that arrived at Milwaukee from May 1st to December 1st:

NATIONALITY.	For Wisconsin.	For other States.	Total.
Norwegians. Germans. Swedes. Danes English Irish	1,817 173 176 65	5, 249 869 627 80 26 12	7, 860 1, 686 800 256 91 71
Welsh French (Belgians) Russians Finlanders Hollanders	18 435 7 14 106	23	18 485 7 37 106
Total	5,097	6,386	11,489

The following is the report for Chicago from May 1st to September 1st:

NATIONALITY.	For Wiscon-	For other States.	Total.
Norwegians. Germans. Swedes. Danes English Bernese	1,400 841 241 90	3, 380 2, 406 1,198 61 423	4,272 3,806 1,589 302 513 10
Total	3,024	7, 418	10, 442

Taking Milwaukee and Chicago together, the report is as follows:

Nationality.	For Wisconsin.	For other States.	Total.
Norwegians	3,553	8, 579	12, 133
Germans		2,775	5, 492
Swedes		1,825	2,339
Danes		141	558
English		449	604
Irish	59	12	71
Welsh	18		18
French (Belgians)			435
Russians	7		7
Finlanders	14	23	37
Hollanders	106		106
Bohemians			116
Bernese			10
Totals	8, 121	13,864	21, 925

Taking into account that arrivals are reported only for four months of the time in Chicago, and seven in Milwaukee, and counting also those that arrive at other ports, it is safe to calculate that at least 10,000 immigrants have settled in this state the past year, and probably considerably over that number. Counting the average money value of these at \$100 each, which is a very low estimate, we have the sum of one million dollars added to the wealth of the state from this source alone.

I appointed Mr. P. Langland as agent at Chicago for four months, viz: from May 1 to September 1, to attend to immigrants arriving in that port, the arduous and often unpleasant duties of which he attended to with industry and fidelity, and discharged to my entire satisfaction. He received the amount stipulated by law, \$75 per month, for his services. Mr. A. Fermann acted as agent for the state in Quebec, without compensation, and did valuable service in giving information to immigrants, distributing documents, etc. Mr. William Abell, of Milwaukee, has for some time been acting as assistant commissioner, without compensation from the state, and many thanks are due to him for the faithful and efficient manner in which he discharged his duties.

I would recommend for the consideration of the legislature the propriety and advisability of increasing the appropriation for immigration purposes to at least \$10,000. This amount can be expended to advantage, and will return many fold to the state. We have as yet done very little to induce immigration as compared with our sister states, when in fact we need to do much more than they. The broad prairies of Minnesota, Iowa, Kansas and Nebraska are open and known to everybody, easily travelled over and explored, whilst many portions of our own state are yet a sealed book. The density of the timber in certain portions, and consequent difficulty of making roads, makes unsettled portions difficult of access, hence their advantages are not as easily learned and made known. There are in certain portions of the state large sandy, pine barrans, almost worthless. People in travelling over these, are too apt to imagine that all the country is like them, and give that impression to their friends or perhaps to the public. To overcome or refute such statements, we must be able to state just where the poor land is, and just where the good may be found, the quantities in which it exists, and what special advantages it affords. It is an easy matter to see that this is a task of no small magnitude. Then there are our mining and manufacturing interests, both of which are destined to play an important part in the development of the state must be properly made known, and a few thousand dollars spent yearly by the state in making known its resources will prove a good investment.

Under the present law the Commissioner is required to act as local immigrant agent in Milwaukee. This imposes upon him a very severe duty during the summer months, a duty that it has heretofore been considered necessary to have two men to perform. This necessarily interferes with the discharge of his proper duties as Commissioner, and I think the legislature will see the necessity of authorizing the appointment of a local agent at Milwaukee, the same as in Chicago. Under the present law, also, the Commissioner is required to pay his own office rent, furnish his own stationery, fuel, etc. It seems to me it would be but right to place him in these respects on a footing with the other state officers.

The Commissioner should have authority to allow compensation in certain cases for labor performed in the distribution of pamphlets and other information or documents. As a general rule emigrant agents can be found who will perform this labor gratuitously, but in places, especially where there has been but little immigration—and these are the best fields to work in—it is impossible to get men who will attend to it properly without some compensation. It is cheaper for the state to pay something for getting the work done well and thoroughly, than to have it poorly done for nothing.

There is considerable trouble with runners and swindlers who entice immigrants to boarding houses, and sometimes by giving false information as to the departure of trains or boats, detain them for the purpose of obtaining their money. This is practiced less perhaps in Milwaukee than in any other city where so many immigrants arrive, and yet I think matters even there might be very much improved. The commissioner should be empowered to issue rules and regulations for the government of all "runners," or expressmen who have anything to do with immigrants, and he or any agent appointed by him should be given the authority of a policeman to enforce the same. This would place these unprincipled men under control, and with proper vigilence on the part of the commissioner, the many impositions practiced upon immigrants would be put to an end, as far as the state is concerned.

I append to this report a communication from Professor Murrish, Commissioner for the survey of the lead mines, wherein it will be seen that important discoveries have been made in that department. A few communications, not regular reports, but conveying valuable information, are also appended.

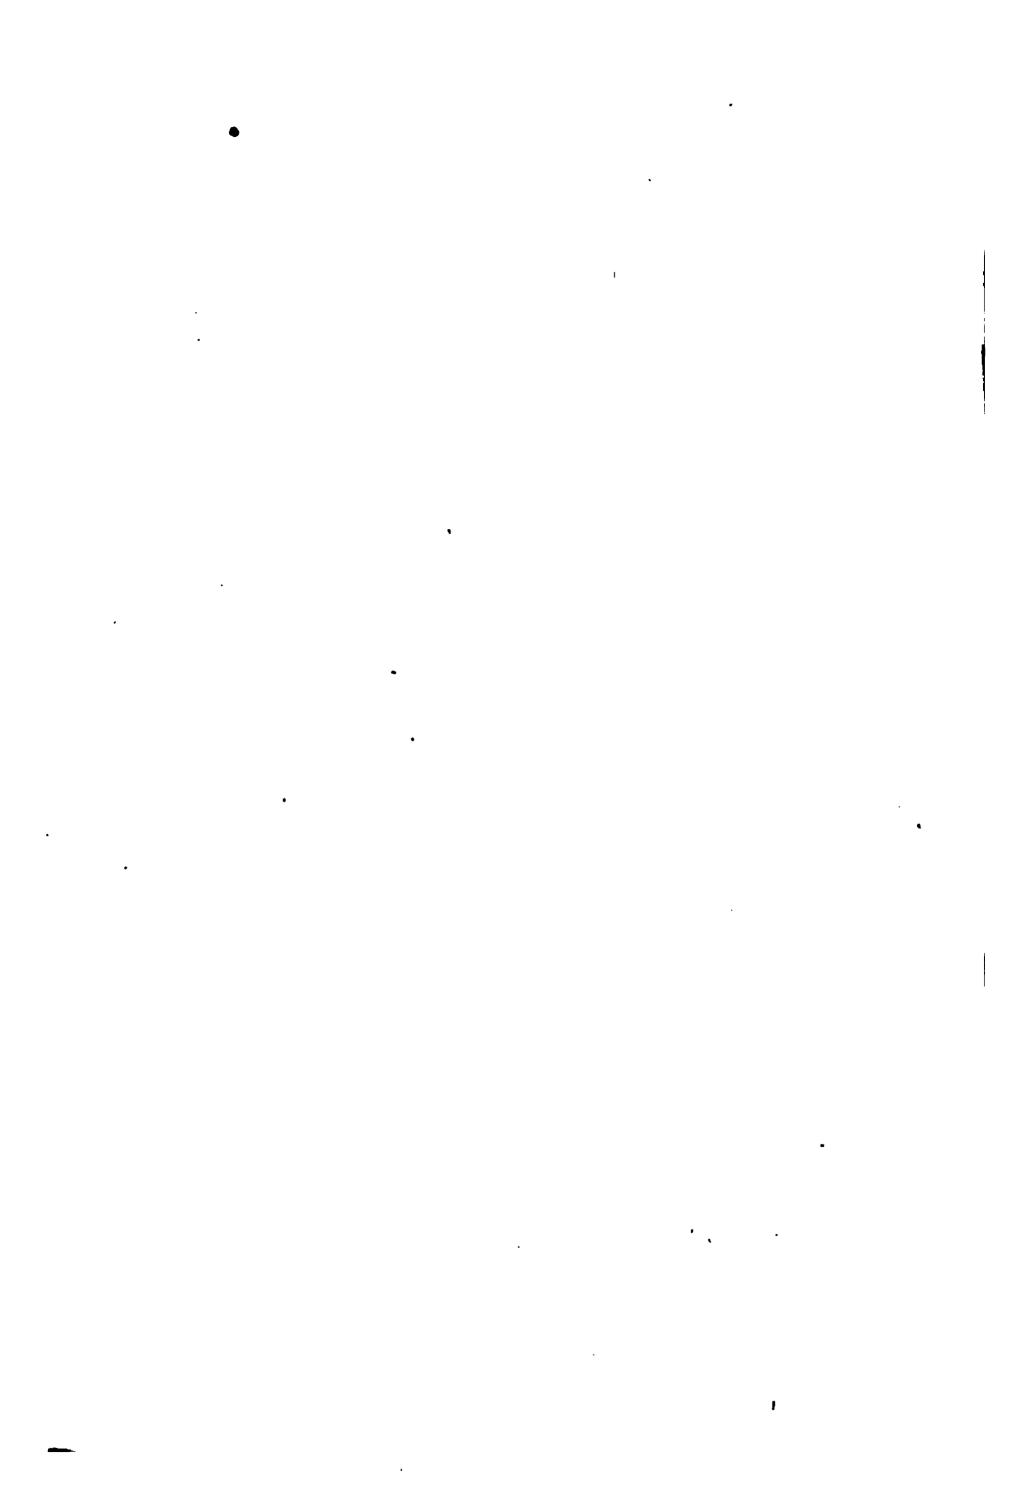

This report would not be complete without a favorable mention of the humane and liberal treatment that immigrants receive at the hands of the Milwaukee and St. Paul Railroad Company. No old or infirm person, or women and children have been left in Milwaukee for want of means to get further, the company always passing such over their roads free of charge. Much credit is due to Mr. Carpenter, general passenger agent, and Mr. Christie, chief baggage master.

In the preparation of my report on the general physical characteristics and industries of counties, I have endeavored to confine myself to the most salient points, and given only such information as I deemed of special interest to the immigrant and all in search of important statistics—showing the general topography of the country; contents and area of counties; the amount of land owned by the state; by other corporations, and the number of acres, and where located; the amount of land subject to entry under the homestead law; varieties of timber; the kind and quality of land; the facilities for water-power, etc., with some suggestive statements relative to agriculture.

The reports are brief, and contain a condensed synopsis of communications from parties in nearly all the counties in the state. Of those not received, I have thought proper to condense from the immigration pamphlet of 1870 and the agricultural report of 1871, such a part of the reports found therein as I considered of special import to a report of this kind. While the statements partake more or less of sameness, they differ essentially in subject matter, and I believe will be acceptable, at least, to that class of readers in search of permanent and comfortable homes.

All of which is respectfully submitted.

OLE C. JOHNSON, Commissioner of Immigration.

## REPORTS OF COUNTY COMMITTEES.

#### ADAMS COUNTY.

BY A. O. HOLM.

Adams county is situated on the east side of the Wisconsin river; is bounded on the north by Wood county, Sauk on the south, and Juneau on the east, and contains seventeen townships, with a population of 6,713. Much of the county is yet undeveloped. The soil is sandy, mixed with a clay loam, which makes it adapted to the cultivation of all kinds of farm products. The topography of the county is a rising grade of about five feet per mile from south to north. It contains 682 square miles, and according to the census of 1870, 42,913 acres of land were under cultivation. The natural adaptation of the low lands for the cultivation of crauberries, must in time be recognized as an important feature in enhancing the growth and industries of the county.

Land held by actual settlers for disposal, ranges from \$1.25 to \$25.00 per acre. A large proportion, however, is held by the state, equal to about 56,000 acres. This land is now offered by the state for fifty cents per acre.

The general government also owns between 40,000 and 50,000 acres, located principally north of town line No. 17 and east of range 5 east, subject to entry under the homestead law. The Milwaukee and La Crosse Railroad have in their name nearly -4,000 acres, located in townships No. 14, 15, 16 and 17, north of range 5 and 6 east, and for some reason have never seen fit to put it into market. Comparatively little manufacturing is carried on in the county, except in flour. There are a number of

2—Ім. Сом.

(Doc. 14.(

excellent water powers yet unimproved. The county is well watered—springs and small creeks abound.

The principal timber is oak and pine, to be found along the banks of the rivers; basswood and ash growing on the uplands. Of the streams that traverse the county, none but the Wisconsin is navigable. Game is abundant, consisting of deer, prairie chickens, partridges, quails, etc. The climate is dry and healthy. Agriculture is the principal source of industry. A majority of the inhabitants are Americans, coming hither from New York, Pennsylvania and Ohio. The foreign element is about evenly divided as to Germans, Irish and Norwegians. At present we have no railroad facilities, only prospective. A road from Portage City to Grand Rapids is among the probabilities, forty-two miles of it will run through this county; and it is hoped that the Sheboygan and Fond du Lac railroad will extend its line into this county from the east.

## ASHLAND COUNTY.

[From the State Immigration Pamphlet, 1870, with corrections and additions by S. S. Fifield.]

Ashland county contains an area of about 1,200,000 acres, of which 166,000 are state lands, and a large amount government lands—many of them being among the most valuable lands in the state. The Penoke iron range lies in this county, and only awaits development to show that it is one of the best and most extensive in the United States. Being only twenty-three miles from Lake Superior, this valuable deposit cannot long remain unimproved, and the time must soon come when a large number of laborers will find employment upon this valuable iron deposit.

La Pointe, its county seat, is one of the oldest settlements in the state, it formerly being a Catholic Mission, established by the Jesuits, soon after the settlement at Green Bay.

The county is heavily timbered with pine and hard wood; well watered, and has many fine water-powers upon its numerous streams. There are many large tracts of hard wood, agri-

cultural lands that produce abundant crops of spring and winter wheat, oats, rye, barley, potatoes and vegetables. Grass, however, is the best crop, and in a few years, when railroads have pierced the wilderness, stock-raising will be one of the chief sources of wealth. Apples, pears and plums, as well as nearly all varieties of small cultivated and wild fruits do well, and there is no doubt but what in years to come, fruit will be raised in abundance. As yet, however, the settlers have paid but little attention to farming, being chiefly engaged in the fisheries, and in the lumber business.

The Central Wisconsin railroad is now being constructed from Stevens Point northward, and its terminus is located on Ashland Bay, in this county.

The building of railroads to our Lake Superior harbors is attracting quite general attention, and there is probably no part of the state that holds out better inducements to the emigrant than this portion of our commonwealth.

#### BARRON COUNTY.

#### BY ORVILLE BRAYTON.

Barron county contains twenty-five townships, from township 32 to 36 north inclusive, and from range (10) to range (14) west surface is gently rolling, although inclusive. The hilly swampy, and the northern part is and central portion of the county has a soil of dark clay loam, while the northeast part which is prairie, is lighter and mostly sand. There are about 516,000 acres in the county, 15,000 cf which is under cultivation, and about nine-tenths of the balance is capable being worked, of the whole amount nearly 20,000 acres owned by actual settlers, are held at an average price ef seven dollars per acre. In the neighborhood of 11,000 acres is state lands, located throughout the county, and for sale at from thirty-five to forty dollars per acre. Subject to entry under the homestead law, and owned by the general government is 192,000 acres

mostly covered by heavy timber. The larger proportion of this land is not yet in market.

The facilities for water powers are excellent. Streams traverse the county that are capable of indefinite improvement. White pine, white and red oak, maple, ash, lind, balsam and aspen are the principal timber. In sections of the eastern part of the county there are valuable quarries of pipe stone, a deep brown stone, susceptible of high polish; soft when first quarried, but becomes hard after a few days' exposure to the air. Valuable buildings in Milwaukee are now being erected from this material. This county has numerous lakes, being from two to ten miles in length, and from one and a half to two miles in width. Game and fish are extensively found. The principal sources of industry are agriculture and lumbering, the latter being operated quite extensively. Water and climate in all respects like those of the most favored and well known portions of northern Wisconsin.

#### BUFFALO COUNTY.

#### BY JOHN DE GRAFF.

Buffalo county is embraced between the Trempealeau and Chippewa rivers, extending north an average of thirty miles, from the Mississippi river to Pepin and Eau Claire counties. The general topography of the county is hilly with rich valleys between. The soil is remarkably varied, especially in the northeast part. It is for the most part a light dark loam, common to black oak openings, but it changes to the richest black soil, then to worthless sand, and again to clay. The perceptible causes are worthy careful observation. There is about 460,000 acres in the county, and 220,300 acres entered—estimated 100,000 improved; of the remainder 200,000 could be cultivated. Nearly 200,000 acres are owned by actual settlers, and are worth on an average eight dollars per acre.

The land owned by Government, amounting to 200,000 acres,

is not very good in quality, being too bluffy to till. The few sections owned by railroad corporations will doubtless in a few years be returned to the general government.

Water power is good, though but little improved, and offers encouraging opportunities for the manufacturer, especially in the erection of woolen mills. Timber of all kinds prevail. Beds of clay for the manufacture of brick are found in many parts of the county, and several parties are successfully engaged in making brick. Lime stone for lime and building purposes are of the choicest. Chippewa river is the only navigable stream in the county. Trout are abundant in the large streams. A railroad from Eau Claire through the county is among the glowing anticipations of the people. The raising of all the principal cereals and stock are the most extensive products. Our undeveloped condition call for capital to turn our water power into untold wealth.

#### BAYFIELD COUNTY.

#### BY J. D. CRITTENDON.

Bayfield county joins Ashland on the east and north. It has an area of 921,000 acres. The county is somewhat broken in its character, is heavily timbered with hard wood and pine—has a soil of superior quality for all kinds of cereals. Only 5,000 acres are under improvement, being owned by actual settlers held at an average price of five dollars per acre. Seven-eighths of the balance, is capable of the highest cultivation, Six thousand acres is owned by the state, located in different parts of the county, and held at the nominal price of \$1.25 per acre. Owned by the general government, and subject to entry under the homestead law, is about 458,000 acres, distributed throughout the county. Owned and controlled by the St. Croix and Lake Superior, Wisconsin Central and Northern Pacific railroads, is a like amount not yet in market. Superior water-power is to

be found on nearly every stream, but partially improved, though capable of unlimited capacity.

No mines are yet worked, though iron and copper is known to exist, with indications of large quantities. The prevailing timber is Norway or white pine, oak, maple, birch, spruce, tamarack, poplar and cedar. Valuable slate and brown stone quarries and clay of the finest quality, suitable for brick, are found, which must of necessity enrich the resources of the county, making it both attractive to the capitalist and laborers. Nine streams traverse the county, none, however, of sufficient size to be navigable. Fish and game of most every kind are found in the streams and forests. Railroads are prospective only, but it is safe to predict that the Wisconsin Central will extend its line through the county before the next succeeding year, by the way of Menasha and Portage to Milwaukee and Chicago. The exportation of fish, and manufacturing of lumber are the principal source of in-Climate excellent for health. The county has an extensive lake front, locked, so to speak, by the Apostle Island, making it one of the best harbors in the world, capable of sheltering and affording protection to the naval and merchant ships of the Fine opportunity is offered for the settlement of colonies. The fish business of Bayfield is estimated for the past year at \$400,000.

#### BURNETT COUNTY.

[From the State Immigration Pamphlet for 1870. with additions by S. S. Fifield.]

Burnett is located upon the St. Croix river and tributaries; is timbered with pine and hard wood; has an area of about 1,000,000 acres, of which 73,000 acres are state lands and a large proportion government lands, which are rapidly being taken up for the valuable timber upon them. There are grants of land by the United States government to aid in building several lines of rail-roads that pass through this county, which when completed will,

with the St. Croix and its tributaries, give its settlers ample facilities for getting their lumber and agricultural products to market. It is settled mostly by Norwegians, and by their known industry, they will make it one of the best agricultural counties in the State.

Homesteads are still quite plenty. The proposed St. Croix and Superior Railroad is located through the center of the county and will, when built, open up a large and valuable tract of agricultural, mineral and timbered lands.

#### CALUMET COUNTY.

#### BY THEO. KUSTIO.

Calumet county contains nine townships with an area of about 200,000 acres, and is one of the smallest counties in the state. The population of the county according to the census of 1870, is 12,334. There are 66,000 acres of improved land, the average price of which is about twenty-five dollars per acre; the unimproved land consisting of 140,000 acres ranges from three to twelve dollars per acre. Nearly the whole lands are capable of cultivation. The south half of the county is gently rolling, the nort's being more level, and in places swampy. The swamp-lands are generally owned by commissioners and have no appreciable value. We believe the general government does not own an acre of land. The Fox River Improvement company owns a small tract of land in the western part of the county.

The facilities for water power are about average; timber is principally of hard wood. Marble is found in the southeast part of the county, in town twenty, range twenty; also valuable stone-quarries and brick yards in number on the west side. Several small streams run through the county, the largest being the Manitowoo, none navigable. Nevertheless, Lake Winnebago lying on the east shore gives ample facilities for shipping and market privileges. Our railroad prospects are most flattering. The

Wisconsin Central Railroad survey passing through the county. The industry of the county is mainly confined to agricultural pursuits.

#### CHIPPEWA COUNTY.

BY WM. RICHARDSON, CHIFPEWA FALLS.

Twenty years ago, when the pioneers of this county came here for the sole purpose of lumbering, they supposed that pine lands would only produce pine trees, and consequently they brought their flour, pork, corn, beans, potatoes, and in fact all the necessaries of life, up the Mississippi in keel boats from Prairie du Times are changed; now we produce both winter and spring wheat, 20 bushels per acre, which sells in Milwaukce for Our oats are No. 1; average crop 40 bushels to the acre. Barley and rye grow equally as well. Hay grows wild in great abundance, and yields two tons to the acre. We also raise first quality of timothy hay, two tons to the ac:e. As for potatocs, the world cannot surpass us in quantity or quality; the average crop is 200 bushels per acre. We have almost all kinds of wild fruits in abundance. Quite a large number of apple trees and fruits have been set out the past season, and as apples do well fifteen miles south, we hope soon to raise fruit in abundance.

The stock of the county is of a good average quality, but is mostly brought from Southern Wisconsin, Illinois and Iowa. The pineries make a great demand for horses and working cattle. Three hundred breaking teams were employed last summer in turning over the prairie sod. Wild land can be bought for from three to ten dollars per acre. Twenty miles from the county seat, or from the West Wisconsin Railroad, good land can be bought at government price. Improved lands are held at \$25 per acre. The soil of the heavy, hard-wood timber land is what is termed clay soil; that of the prairies is a rich, black, sandy loam. The people settled in this county are from every nation, and the door stands open to all.

In the northern part of the county, copper, silver and lead ores have been found, but not in paying quantities. We have plenty of sandstone and granite for building purposes.

Lumbering is the specialty of the county in the way of manufactures. According to the lumber inspector's report, 43,316,419 feet of lumber, 20,000,000 feet of lath and 18,000,000 shingles were manufactured in 1870. There are 1,580,480 acres of pine lands in the county, which at the present rate of consumption, 200,000,000 feet per year, will last fifty years. A large portion of our pine lands have oak, maple and ash timber scattered through it. Chippewa Falls, situated at the head of steamboat navigation on the Chippewa river, is the base of operations in the lumber region. It has the best water power in the world, and one of the largest saw mills in the United States run by water; capacity 35,000,000 fest per season. For twenty miles up the river saw mills, of a capacity of from one to fifteen million feet occur frequently. Over 200,000,000 feet of saw logs are cut and put into the river each season. This requires 2,000 men, and horses and cattle in proportion. To supply this force furnishes our farmers a good market for all they can raise. Above Chippewa Falls is a reservoir large enough to stop and hold all the logs that are cut in the winter season. The logs are held secure until the ice melts, then they are assorted and turned out as fast as required. Each owner, having his own mark, can get his own logs. The logs are run over the falls and into the several booms along the river, and as far as the mouth of the Chippewa, where they are rafted and sold down the Mississippi.

When the lumber is sawed at our mills it is rafted in cribs 16 by 32 feet, coupled up to make rafts containing 100,000 feet. It is then run down the river by skilled pilots and hardy raftsman to Read's Landing on the Mississippi river, there coupled up in rafts from 300,000 feet to 2,700,000 feet; it is then sold to go down the river, at an average price of fourteen dollars per thousand, by the raft; a clear gain to mill-men of four dollars per thousand feet. The process is repeated every year and the result has been that most of the lumberman have accumulated large wealth.

For a new county our roads and public buildings are good. We

have plenty of good school houses, and the schools are well attended. What Chippews county needs most is capital, and skill to develop her great resources: and all are cordially invited to come and help in in this great and profitable work.

#### CLARK COUNTY.

BY HON. G. W. KING, HUMBIRD.

Clark is one of the largest counties in the state, being thirty miles wide from east to west, and fifty-four miles long from north to south. It is well watered by the Black and Eau Claire rivers and their tributaries, and by some of the tributaries of the Chippewa river. Lumbering has been the principal business of the people in this county until within the last five years; now quite a large number are engaged in farming. There is a large amount of excellent farming land in the southern and eastern portions of the county, mostly heavily timbered with sugar maple, basswood, black and white oak, elm, black and white ash, butternut, birch and iron wood. The surface of the country in the hard timber is gently rolling, with a soil of rich, clay loam; there are very few swamps. The land is admirably adapted for the raising of winter wheat, oats, grass and vegetables. It is the best grass land I ever saw, and will in a few years be one of the best dairy counties in the state. The county is but thinly settled, but is rapidly filling up with an industrious class of men, who are not afraid of the hard work that is inevitable, where farms are cleared up in a heavily timbered country. The greater portion of the settlers are from the eastern and middle states, with a few Germans, English, Scotch and Canadians. The poplation of the county in 1860 was 789; at the present time it is about 4,000, the greater portion of whom have settled here in the last four or five years. There is a vast amoun! of good land in this county still unsettled; part of it government land, and some belongs to the state; some is owned by the Fox River Improvement Company, and some by non-residents, all of which can be bought on reasonable terms, most of it on time.

Very few counties in the west offer greater inducements to settlers than this; the climate is healthy, bilious diseases are comparatively unknown; the water is good and abundant; and the soil is unsurpassed for the production of all kinds of grain, especially winter wheat; for sixteen years I have not known a failure in the crop of winter wheat where the crop was put in, in anything like good order. We generally have good crops of corn, oats, rye and most kinds of vegetables. For a time it was thought that apple trees would not thrive here, but within the last three years, many young trees have come into bearing, and thousands more have been set out and are doing well.

The lumbermen consume all the produce of this and the adjoining counties, which makes a good home market for all we have to sell. They also give employment to every man who is able and willing to work, which is a great help to settlers who have but a small amount of capital to begin with, as it gives them plenty of work for themselves and teams in the winter, at good wages. On an average, from one hundred and fifty to two hundred and fifty million feet of logs a year have been put into the different streams in this county, for a number of years past, and there still remains a large amount of pine to cut. There are quite a number of saw and grist mills located in the different parts of the county that are doing a prosperous business. Lumber is very cheap, and it costs comparatively but little to build here, to what it does in most of the other counties.

Many improvements have been made within the past five years. Roads have been opened in every direction, school houses have been built, villages laid out and settled. A railroad has been built, running through the southwestern part of the county, with a station at Humbird, sixteen miles from Neillsville, the county seat. Other roads and improvements are in contemplation, which promise to add much to our prosperity.

# COLUMBIA COUNTY.

BY THOMAS YULE, P. POOL AND O. A. SUTHMAYD.

Columbia county is one of the inland counties of the state. The general surface of the county is level, yet not flat, but sufficiently rolling to afford ample drainage. The general quality of the soil is good. The county contains 492,500 acres of land, about two-thirds under cultivation, including improved swamp Nearly one third of the balance is capable of being lands. worked. In the possession of actual settlers is 485,580 acres, average price as assessed, \$12.83. About 2,400 acres are owned by the state, mostly marsh, in the northern part of the county. The government holds subject to entry under the homestead law about 600 acres, this too, is nearly all marsh. Owned by the Railroad Farm Mortgage Land Company is 3,920 acres located in the northern part of the county. The facilities for water power are good but only partially improved Lead is supposed to exist; two or three companies are sinking shafts for the purpose of mining; a fair sized vein has been discovered. The principal timber is oak, maple, basswood and elm. Stone quarries, lime and sand stone are found, but only worked for local use. A cream brick is manufactured at Portage, which commands the highest price of any put into market. Wisconsin and Fox rivers are the only navigable streams running through the county. This county has several lakes of which lake George and Wissahicon are the largest except Swamp lake which covers about 700 acres. Fish are found in these lakes in considerable quantity. There is not an abundance of game, prairie chicken and duck are about all that now remains.

Our railroad communications are good, no point in the county more than twelve miles from a line of road, and more roads are in prospect. Agriculture is the active pursuit and the growing interest taken by farmers leads us to believe that it is in a prosperous condition.

Manufacturing is not carried on to that extent that it might be, with the usurpassed facilities of water power it should rank among the first in manufactured goods in the state.

## CRAWFORD COUNTY.

BY WALDO BROWN, PRAIRIE DU CHIEN.

This county, which originally embraced a large portion of western Wisconsin, is now composed of about five hundred and sixty square miles, near the southwest corner of the state, and north of the junction of the Wisconsin and Mississippi rivers, the former being the southern, and the latter the western boundary. The population of the county by the census of 1870 was 13,177.

Among the striking features of its topography, are the towering bluffs, which often rise to the height of from four to six hundred feet, and which present their bold, rocky fronts on the whole line of river boundary as well as along either bank of the principal streams. The bottom lands lying at the foot of these bluffs are very fertile, and the soil, which is a light, sandy loam, is of great value for the production of garden vegetables of every description, which come to maturity much sooner than on the high lands in the same localities.

Through this county, near its center, runs a divide, which separates the valley of the Mississippi from those of the Wisconsin and Kickapoo rivers, and from this, at right angles with it, are alternations of ridge and valley, the former generally wooded, while in the vales are fertile lands, valuable forests, prairie meadows, and good water-powers on never-failing streams.

This peculiar formation gives the county the appearance of being rough and broken; and so it is, yet its soil, not only on the bottom lands but on the ridges, is rich and productive to such an extent that the husbandman reaps here as rich rewards for his labor as do those who have sought homes on distant prairies.

The soil of the high lands is a light, sandy clay, easy of tillage, and is celebrated for producing the finest qualities of wheat, while the yield is about the same as on the prairies. It is equally well adapted to corn, oats, grass, barley and buckwheat, while for potatoes and other root crops it is of superior quality. These natural advantages were overlooked by immigrants for many years,

but the fact that during the last decade our farming population has almost doubled, proves that our lands and agricultural facilities are appreciated, and that in the future they will be sought more and more, not only by our own countrymen, but by immigrants from foreign lands.

There is no county in the state better adapted to fruit-growing than is this, the soil seeming to possess the requisite elements in the right proportions for healthy growth and prolific fruitage. Fruit is rarely killed by frosts, and trees and shrubbery are less affected by disease, climatic changes and vermin than in other less favored localities.

The practicability of apple culture is fully demonstrated, careful and observant nurserymen having discovered after years of experiment the varieties best suited to this soil and climate. Thousands of acres of the hills of this county should at once be planted with apple orchards and vineyards, whose products in a few years would far exceed those of all its grain fields. Besides the apple, there is an abundance of wild fruits, and currants, gooseberries, raspberries, blackberries, strawberries, grapes, etc., have a rapid growth, and rarely fail to produce well.

Lead and copper ores have been discovered, and there are indications of the existence of heavy bodies of those minerals, but none have yet been found which would pay for working. Extensive quarries of excellent building stone are found in every town in the county, and from the bluffs on the Wisconsin river large quantities are taken each year and shipped to the east. The best stone in the beautiful capitol building at Madison are from this quarry.

Agriculture and trade have hitherto been the pursuits of the people to the almost entire neglect of manufactures, the census of 1870 showing an aggregate of farm production of \$823,000, while the product of our manufactures was but \$240,000. But during the past year the people have awakened to the importance of manufactures to all other branches of industry, and henceforth the hammer, loom and anvil are to have their devotees as well as the plow. In the line of public improvements, are excellent

roads and good school houses, so numerous that every child enjoys the privilege of a good common school education.

The Milwaukee and St. Paul railway extends along the southern line of the county for a distance of twenty miles. Bridge-port is one of the principal shipping points on the road for grain and live stock, while at Prairie du Chien the company have one of the largest freight depots in the state, a grain elevator with a capacity of 250,000 bushels, and from which 275 cars have been loaded with wheat in a single day. The company have here large car works, a good passenger depot, and near this one of the finest hotels in the west. The business of the company has increased so rapidly under its excellent management, that it has been compelled to erect a temporary bridge over the Mississippi for the transfer of trains during the winter, while in the season of navigation, in 1870, three steamers were constantly engaged in the transfer of cars from one shore to the other.

Second to no other enterprise affecting the welfare of this county, is the scheme for the improvement of the Fox and Wisconsin rivers, over which Marquette and his little company sailed nearly two hundred years ago on a voyage in search of the "Father of Rivers," and whose success was a prophecy of this future Erie canal of the west. Cheaper transportation for western produce to the seaboard has become a necessity, and while the completion of the work will add millions to the wealth of the west, it will make within the limits of this county a city which shall bear to another upon the lakes, the same relations that Buffalo does to New York. That city will be Prairie du Chien. With the dawning of that day will come to Crawford county an increase in wealth, population and the value of its lands of which her people have hardly dreamed as yet.

The commerce of the county at this time, has an extent and importance which few would imagine who have not examined the figures which show it; and this is not conducted by rail alone, but three organized lines of elegant steamers touch at our river towns, and do not only a large freight but passenger business also.

We submit a few items of the shipments by rail from Prairie

du Chien during 1869, not as indicating the production of the county, but rather its commercial transactions:

Wheat, bushels 4,851,875
Barley, bushels
Oats, bushels
Flour, barrels
Dressed hogs, number
Live cattle, number
Live hogs, number
Wool, pounds
Butter, pounds
Hides, pounds

And the aggregate of shipments in pounds for that year amounted to 416,687,720 pounds. Heavy shipments of grain were also made from other stations and from river towns.

The county is remarkably healthy, is well watered, has neavy forests in every town; in her markets, lumber and all descriptions of building material are plenty and cheap. Improved lands may be purchased at from fifteen to thirty dollars per acre, and unimproved from five to ten dollars.

The public schools are under the charge of good teachers and an efficient county superintendent, and are accessible to nearly every child. In Prairie du Chien is a large German school, with an accomplished native teacher, while the Catholics have a large "Sisters'" school, and will soon open another of a higher grade in a large and beautiful building, which was erected at a cost of \$50,000.

The people of Crawford county are intelligent, industrious, wide awake to their interests, and hence are good patrons of schools, churches and their press, and taken all in all, the county possesses the natural and other advantages which in future will per.nit her to take a front rank among those which make up the noble commonwealth of Wisconsin.

# DANE COUNTY.

## [From the State Immigration pamphlet for 1870.]

Dane county is situated midway between Lake Michigan and the Mississippi river; its southern boundary being twenty-four miles north of the south line of the state. It is bounded on the north by Columbia and Sauk counties, on the east by Dodge and Jefferson, on the south by Rock and Green, and on the west and northwest by Icwa and the Wisconsin river. Its extent is forty-two miles from east to west and thirty-five miles from north to south, containing thirty-five townships, or one thousand two hundred and thirty-five miles, or 790,400 acres of land.

Madison city, the county seat and the capital of the state, has one of the most beautiful locations in the world, in the midst of charming lakes. Here is the new capitol building, which, surrounded by a commodious and elegant park, presents an impressive appearance of taste and beauty; and among the other substantial buildings are the United States postoffice, city hall and the court house. The state university buildings and university farm occupy an elevated and pleasant site about one mile west of the capitol. There are thirty-five towns and fourteen villages in the county. Six of the towns are largely settled with Norwegians, and six by Germans, and the American and European nationalities are more or less represented in all of the towns.

The county throughout is well watered by lakes and streams, and the soil is generally fertile; in some parts extensive prairies prevailing, and in others undulating and hilly land. Timber is plentifully interspersed throughout the county.

The public land in the county is all taken up, and the wild land remaining can only be got from speculators and others.

It has a larger area of cultivated land (395,703 acres) than any other county, and produces the largest crop (2,730,130 bushels in 1869) of Wisconsin's staple wheat, as well as large crops of other kinds.

Stock raising receives much attention, and pure-blooded animals are being introduced.

Doc. 14.)

Fruits of nearly every sort grown in this latitude are produced in abundance.

Manufactures have increased in number and variety since 1860. There are numerous churches of all denominations throughout the county, also public and private schools.

The Milwaukee and St. Paul, the Chicago and Northwestern, and Madison and Portage railroads have brought it into direct connection with all parts of the state and country.

# DODGE COUNTY.

#### BY IMMIGRATION COMMITTEE OF COUNTY.

The county is located in the south east part of the state, being the third county from lake Michigan, as also from the south line of the state. It embraces twenty-five congressional townships from which three pretty large lakes must be ed, to give the area of arable land. The eastern part of the county east of Rock river, which runs through range 17 is heavily timbered, and is somewhat hilly, the northern part west of Rock river, is prairie interspersed with burr oak openings and gently undulating. In the south the quality of land is not so good, being what is called ridge land and marsh. The soil of the openings is of rich black loam with a clay subsoil, as a whole excellent for agricultural purposes. According to official survey, the county contains 576,000 acres of land of which 380,000 acres are under cultivation, and about 100,000 acres capable of improvement. All lands are owned by actual settlers except the marsh lands, and are held at an average price of \$40 per acre. Of the marsh land of which we have just spoken there is 6,300 acres, held at 75 cents per acre. Several roads own the right of way through the county in the interests of their respective companies. The Sheboygan and Fond du Lac railroad company being the only land owners and they to a very limited amount. There are three lakes of considerable size in the county, the largest being

lake Horicon, the next largest is Beaver lake. These lakes furnish an abundance of fresh fish of the first quality, and affording refuge for millions of wild game such as ducks and geese. The principal streams are the Rock river and Beaver Dam river, the former could be made navigable, and its utility for mill privileges could be greatly improved.

The only mineral prevailing is iron, and its mines are inex-They lie on the east side of Rock river, and are owned and worked by the Milwaukee Iron Company, the North Rolling Mill Company and the Wyandotte Rolling Mill Company. At Waupun is located one of the best limestone quarries in the There is also a valuable quarry of the same at Juneau, the county seat, and one at Lowell. There are four brick yards in the county, making excellent brick. The Chicago and Northwestern railway passes through the center of the county from north to south. The La Crosse division of the Milwaukee and St. Paul railway passes through the southwest part of the county. The northern division passes through the county from east to west, crossing the Chicago and Northwestern road. Another branch of the same road starts from Horicon and passes through the towns of Burnett and Chester. The fifth road is soon to be finished, starts from Iron Ridge, where it connects with the Milwaukee and St. Paul road and connects at Fond du Lac with two other roads. The inhabitan's are industrious, intelligent and frugal, following, principally, agriculture and mining. The climate is exceedingly healthy; doctors are at a discount. The water is called hard, as in all counties where the substratum is lime rock.

# DOOR COUNTY.

BY C. A. MASSE, PETER ZEMMERS AND J. A. SIMMONS.

Door county is situated in the northeast part of the state of Wisconsin, and between Lake Michigan and Green Bay, is seventy miles in length, with an average width of about ten miles.

The general topography of the county is undulating. The soil is generally of a clay loam, interspersed occasionally with soils more or less mixed with sand. In nearly every portion of the county is bottom lands of alluvial deposits, with an average depth of six feet of the richest black loam. On the uplands a clay soil predominates, at an average depth of twelve feet. county contains about 300,000 acres of land, of which 90,000 is under cultivation; of the balance, 200,000 is only capable and adapted to agricultural pursuits. Owned by actual settlers is 230,000 acres, held at an average price of \$15 per acre; 38,000 acres is owned by the state, located in all parts of the county, at an average price of eight shillings per acre; owned by the United States there are about 2,000 acres of fair quality, that can be entered under the homestead law, which gives to any man for ten dollars, 160 acres of land, providing he will agree to live on and improve it; canal companies own about 1,200 acres, average price \$3.50 per acre, located throughout the county; the principal owners being the Green Bay and Mississippi caual company.

Lake Michigan canal company. Water power good, and susceptible of improvement. The land in the county is timbered with oak, maple, beach, elm, ironwood, birch, basswood, pine, hemlock, tamarack, cedar, spruce, balsam and other varieties of timber, common to this part of North America. Very valuable marble and stone quarries exist and are found in very large quantities. Sturgeon Bay extends far into the county, and several streams traverse it, all well stocked with fish. All kinds of game are abundant.

Should government push the canal to completion, a railroad will undoubtedly be constructed from Green Bay to Milwaukee. farming, lumbering, the manufacture of shingle, stavebolts, cedar posts, railroad ties and many other lucrative sources of industry are the pursuits followed. Excellent opportunity is offered for the investment of capital. Blast furnaces might be run to great advantage, every thing necessary being near at hand except the ore. Climate temperate and pleasant, water pure and excellent, no epidemics, no contagious diseases, in fact, for health-

fullness, it cannot be surpassed. The prospects for the building of a ship canal are flattering; with such a highway for commerce all kinds of produce must prove remunerative. Nearly all kinds of fruit raising are attended with the best results.

### DOUGLAS COUNTY.

#### BY D. G. MORRISON.

Douglas county is situated in the northwest part of the state, at the head of lake Superior. The general surface is rolling, and contains within its limits every variety of soil, with a marly subsoil of clay. The county is 40 miles square and has 1,000 acres under cultivation; of the balance nearly seven-eights is capable of improvement and cultivation; one-eighth is owned by actual freeholders, held for disposal at fair prices. owns about 1,500 acres; the general government 300,000 acres. No railroad lands yet in market. The county is traversed with four streams, with ample facilities for water power. mens of copper have been found, of the richest quality; also large deposits of iron, though unavailable at present, owing to the want of railroad facilities. Both granite and red sand-stone, and a good quality of brick have been manufactured from the clay. The Northern and St. Paul Road is now in operation, with every prospect of passing through the county. Lumbering, and fishing are the principal sources of industry. Water good. The average days without frost from one hundred to one hundred and twenty. Potatoes, oats, barley, wheat, and all kinds of cereals and grain, except corn, yield abundantly.

## DUNN COUNTY.

### BY S. B. FRENCH.

The population of this county at the time of taking the census of 1870 was 9,491. Its progress and settlement, and rapid development of its agricultural resources is almost magical. The

county is almost equally divided between open prairie, in the eastern half, having a fertile, sandy loam for soil, and heavy timbered land in the western half, with a soil of rich clay loam. The surface of the country is generally rolling. The county contains 550,000 acres of land, one fourth of which is under cultivation, and two-thirds of all remaining lands are suitable for cultivation. Actual settlers are in possession of about one-half of the land in the county, being worth from five to ten dollars per acre. Nearly all of the state land is now sold. About six townships of good land, situated in the northern part, is owned by the general government. Nearly six townships are owned by the Fox and Wisconsin Improvement Company. The West Wis-Company owns two or three townships, consin Railroad situated in the central part of the county. The Red Cedar river traverses the entire county, on which are excellent facilities for water power. Iron ore is known to exist, but it is not worked. The prevailing timbers are maple, oak and pine. Good quarry stone, suitable for building purposes, is found in all parts of the county. Speckled trout are found in all the small streams. The West Wisconsin Railroad runs across the county east and west, nearly through the center. Lumbering, farming and the manufacture of furniture are the most prominent sources of industry. The climate and water are good. The county offers inducements for people of all nationalities, who are willing to work, to come and get land cheap in a growing country, to be soon surrounded by comfortable and happy homes.

### EAU CLAIRE COUNTY.

### BY MARTIN DANIELS.

Compiled from reliable sources, we have the following statistics in relation to the general topography and resources of the county. The county is generally undulating, and contains within its boundaries all qualities of soil, from a rich clay loam to a mixture of worthless sand. It contains eighteen town-

ships, one-eighth of which are under cultivation, of the balance, probably one-third is capable of improvement. In the possession of actual settlers, there are about 50,000 acres, worth from ten to twelve dollars per acre. Owned by the state, is nearly 6,600 acres, of a poor quality, and held at a very low figure. Held by the general government, and subject to entry under the homestead law, 120,000 acres, mostly in the east and south part of the county; 75,000 or 80,000 acres are owned by the Wisconsin Central Railroad Company, and over 7,000 acres belong to the Fox and Wisconsin Improvement Company, held at a price from five to ten dollars per acre for the best quality of land. The best facilities for water power are at Eau Claire, and will be improved as soon as the state legislature passes a bill for that purpose, which the public interests demand, and in consequence of such legislation the whole northwest must receive an impetus which will greatly enhance its growth and wealth.

Pine is the principal timber, and is the great staple manufacture of the county. The vast pineries of Chippewa and Eau Claire yield annually, for manufacturing purposes, in this county alone, from seventy-five to eighty-five million feet, and when it is remembered that at least one-sixth of the pine in the United States is embraced in the two pineries named, the importance of this product can be readily seen. The manufacture of brick is now being worked on a small scale. Eau Claire river runs almost the entire length of the county, from east to west. The Chippewa river runs through one corner. Both are navigable for boats and rafts. The railroad passes through the county, from the southeast to the northwest. The climate is pleasant for this latitude; much of the winter is without storm. All kinds of cereals command higher prices than in Chicago or Milwaukee.

# FOND DU LAC COUNTY.

BY G. DE NEVEU, FOND DU LAC.

The county of Fond du Lac includes within its limits twentyone towns, which, deducting the area covered by the southern end of Lake Winnebago and other lakes, are equivalent to twenty townships of thirty-six sections of solid land. In its natural state it was very equally divided into three parts of prairie, oakopenings or light timber, having from three to fifteen trees to the acre, and heavily timbered land covered with oak, basswood, elm, ash, iron-wood, etc.; the whole so admirably intermixed that hardly any place within the limits of the county is more than two or three miles distant from timber. Generally speaking, the western portion of the county includes the prairie, and the eastern the timber land; the central portion being a sort of compromise between the two, viz: small prairies dotted over by fine groves of oak and other timber. The soil is eminently fertile, as, indeed, is that of our state generally, with, perhaps, the exception of the pine country of the north.

The surface of the county in the western and central portions is gently undulating, seldom rising higher than one hundred feet above the level of Lake Winnebago, with a general average of about seventy feet. Along the eastern shore of that lake, about three quarters of a mile distant, and running parallel to that shore, exists an abrupt ledge of lime-stone running in a general north and south direction, through the towns of Calumet, Taycheedah and Empire, where it ends, to begin again in a southwesterly direction through the towns of Eden, Byron and Oakfield, where it passes into Dodge county. That ledge appears to have been, in ancient times, the eastern and southern boundary of a vast lake, of which lakes Winnebago, Butte des Morts, Pawegan, Green, Rush and other lakes are now the remnants; consequently the soil of that basin is of a rich alluvial character. The narrow belt included between Lake Winnebago and the ledge is superior to any other portion of the county for the production of fruit, cwing to the modifying influence of the water against early and late frosts, and excessive drought in summer.

This limestone ledge is a striking feature in the scenery of this section, which, though lovely, would appear rather tame and monotonous without it; it relieves the landscape by its bold, perpendicular cliffs, that in places rise to the height of a hundred feet and affords prospects from its summit which it

would be hard to match, for loveliness and extent, in the western states or, indeed, anywhere. When wealth accumulates, as it is sure to do, and, indeed, is fast doing, in this favored section, these beautiful uplands will be eagerly sought for the residences of the wealthy men doing business in the city of Fond du Lac, the average distances from the top of the ridge being not more than four miles.

ŧ

f

This ledge deserves more than a passing notice on several accounts: It not only supplies the county with materials for superior lime and building stone; but it also furnishes the most beautiful and true flag-stones, of any desired thickness, from one-half inch up to five or six inches; so true, indeed, that a carpenter's rule will bear on its entire length in any direction. The supply of these is absolutely unlimited. There is enough to supply a continent at low rates. About twenty quarries are worked along the ledge, and the business in stone and lime is not less than \$20,000 per year. Eventually the city of Fond du Lac will mainly be built of stone, as it is the cheapest and safest, as well as the most durable material. The fronts of the finest stores and business blocks are built of bricks imported from Milwaukee or Sheboygan, as those made here are much inferior on account of the lime which pervades the clay. But the greatest value of the ledge, in our estimation, lies in the fact that along its whole extent in the county, that is to say, for a length of about twenty-five miles, innumerable springs of pure and unfailing water gush out at intervals of from a quarter of a mile to not more than one mile, so cool that the thermometer plunged into them never marks more than from forty-six to fortyeight degrees, and entirely does away with the necessity of iced water during the hottest months; they never freeze.

A better watered section than the county of Fond du Lac could hardly be imagined. Almost every quarter section has a living stream of water, large or small, running through it; a circumstance of no small value to the agriculturist, and especially to the dairy man or grazier; for it is well known that all animals, even sheep, thrive best where they can have access to water at all times, and drink when they wish, especially towards the middle

of the day, instead of being watered only mornings and evenings as is the usual practice where they have to be driven to water, or watered from wells. Besides, running water is always more acceptable to animals than well-water.

The stock raised in the county is generally fair, and will hold its own as compared with other sections. It would be difficult to produce finer horses, Devons and Durhams than are found with several farmers in this county, especially about Ripon.

No mineral of any sort, within the limits of the county, has come to the knowledge of the writer, except a bed of iron under the stone ledge in Taycheedah, owned by Mr. Belt. Whether it will prove worth working, is still in doubt. Indications of lead have also been discovered, but nothing certain. It is highly probable that both lead and iron exist in paying quantities, but it is as yet, mere speculation. Erratic blocks of copper are occasionally found.

The climate is very fair, rather dry; at times very hot in summer, and pretty sharp in winter. The winters are generally of an even character, the thermometer mostly ranging above zero; thaws not very common. But some winters are very severe, say once in eight or ten years, when the thermometer will go down as low as 20 degs., and even lower for two or three days at a time. It is extremely salubrious; chills and ague fevers are entirely unknown; those persons who bring them here from other sections are very soon free from them. Snows rarely exceed six inches in depth.

We can state with truth and confidence that to the emigrant, the agriculturist, mechanic or capitalist, the city and county of Fond du Lac offer inducements unsurpassed by any section of Wisconsin, or of the whole west.

## GRANT COUNTY.

Grant county is one of the largest of the settled counties of the state, embracing thirty-six townships and fractions of townships. It is situated in the southwestern corner of the state, and is bounded on the north by the Wisconsin river, on the east by Iowa and La Fayette counties, on the south by the state of Illinois, and on the west by the Mississippi river.

The surface rock throughout almost the entire county is the Trenton limestone. Along the Wisconsin river, however, there is a narrow strip along which appear lines of upper sandstone, magnesian limestone and Potsdam sandstone. The surface is undulating; in some portions hilly. Although usually regarded as a prairie and "opening" county, there are considerable bodies of hardwood forest timber in the southern and northwestern portions. Grant is well watered by numerous small streams, emptying into the Wisconsin and Mississippi rivers, and has a fertile soil, well adapted to the various crops common to this latitude.

Although its development has been much retarded by the want of railroad improvements, it has steadily grown in wealth and population, as will appear by the following figures:

	1860.	1870.
Population Acres of land in farms.  Estimated value of farm products (census 1870)  Value of manufactures.	163, 478	<b>\$</b> 3, 515, 049

The farm cultivation compares favorably with that of other counties. Stock-growing, though slower in making that progress which has distinguished other portions of the state, is now advancing at a commendable rate. While favorable to stock-raising generally, it is especially adapted to sheep-husbandry, which must accordingly receive more and more attention. Fruit-growing has also received considerable attention, and has been quite successful.

The most important products of manufacturing industry are flour, pig lead and woolen goods; the total value of which in 1870, as per United States census of that year, were respectively, as follows:

	A WITTO
Flour	. \$397, 898
Lead	
Woolens	

Value

The business of mining, which, in the early history of the county, was the leading interest, has, of late years, somewhat declined in activity here, as essewhere, in the lead district-Nevertheless, there are immense deposits of both lead and zinc still undeveloped. The mines hitherto most productive, are found in the regions about Hazel Green, Platteville, Potosi and Beetown.

The chief towns are Lancaster, the county seat, and Platte-ville, now distinguished as being the seat of the first State Normal School, and also as being the only town, excepting Boscobel and Muscoda, on the Wisconsin river and the Milwaukee and St. Paul Railroad, which have railroad connection with the rest of the world. It is worthy of remark, however, that measures are now on foot which promise to secure the early extension of the southern branch of the Milwaukee and St. Paul Railroad from Monroe to Calamine, and of the Calamine and Platteville road directly across the county to the Mississippi river.

The population of Grant compares favorably with the best in any portion of the state for industry and intelligence, and the county is accordingly characterized by all those educational and other like improvements which indicate the social progress of a people.

## GREEN COUNTY.

#### BY J. J. TSCHUDY.

Green county is one of the southern tier of counties in the state, lying midway between Lake Michigan and the Mississippi. It contains a square of sixteen townships and a population of 28,609.

#### PHYSICAL CHARACTERISTICS.

While there are a considerable number of acres of level lands in the eastern and southern portions of the county, the surface for the most part is gently rolling—rising, however, in the northern and western sections of the county into high and bluffy hills. In the southern and eastern sections of the county the soil is of a rich, black loam, with a large admixture of vegetable mould, however, on the extreme eastern border a narrow belt of land is found where the soil is a light, sandy loam. The soil of the timbered lands in the west is of a deep clay loam, and produces abundantly, when cultivated, all varieties of crops. The county contains 367,723 acres of land, with at least one-third under cultivation. There is but little land at present in the hands of speculators, the greater part is owned by bona fide settlers, divided into large and small farms; average price per acre, according to assessment, fifteen dollars. Only a small amount is held by the state, being school lands. Facilities for water-power are almost unlimited. Two rivers traverse the county, besides untold numbers of creeks and small streams, most of which furnish valuable hydraulic power, utilized for grist-mills, saw-mills, carding-mills, etc. Lead is found in several parts of the county. The Sugar river diggings, in the northeast part, were once quite celebrated, and yielded a rich return for capital and labor invested, but are ncw deserted on account of no water. One of the great advantages of Green county is the extent and remarkable distribution of timber, timber and prairie, prairie and timber everywhere. largest tracts are in the southern part, where is to be found maple, hickory, walnut, basswood, ash and many varieties of oak. are found in nearly all streams.

Railroad facilities are good, and it has several prospective roads surveyed. Agriculture is, and will probably remain, the leading industrial interest of the county; yet its manufacturing interests are neither few nor unimportant. The climate is excellent, as the former statements will indicate; the land being rolling, and the whole county almost without marshes; when cool and fresh springs and brooks abound throughout the county, it would be safe to predict the general healthfulness of the county. In the matter of school buildings, there is a marked advance on many sections and counties of the state.

# GREEN LAKE COUNTY.

### BY M. H. POWERS, DARTFORD.

Green Lake county is one of the smallest counties of Wisconsin, being four townships in length by three in breadth in the southern part, and two in the northern; ten townships in all.

It is situated near the geographical center of the state. The Fox river traverses it from near the southwest corner to the northeast, passing through, or forming a portion of the borders of five of the towns, and affording transportation facilities, in a greater or less degree, for the entire county.

The Milwaukee and St. Paul railroad passes near its eastern boundary and enters the county in the town of Berlin. Several projected lines of railroad are before the public, some of which, if they are consummated, cannot fail to pass through its territory either in its northern or central portions, or both; and surveys of the Milwaukee and St. Paul Railroad have been made looking to an extension towards Stevens Point, Lake Superior, and a connection with the Northern Pacific.

The Fox and Wisconsin rivers ship canal has many warm advocates in this county. Its early completion, it is believed, would greatly promote every material interest, not only of this county, but the adjoining counties, as well as of the whole northwest.

By the census of 1860 the population of the county was 12,663; in 1870 it is 13,287. Berlin, Princeton and Markesan are the incorporated towns in the county, of which Berlin is the most important, having a population in 1870, of 2,778. It is situated on the Fox river, at the point where the Milwaukee and St. Paul railroad connects with it, giving it the advantage of both railroad and water communication. It is the seat of a very extensive trade, especially with the country north and west of it. Several branches of manufactures are established here, which are growing into very respectable proportions. Among which may be specified mills for the manufacture of lumber, from one to three of which have been running since the settlement of the town, and have added not a little to its development and wealth. Some three or four wagon and carriage shops have given em-

ployment to a large number of hands, while the usual complement of workers in wood and iron in the finer, as well as coarser, varieties of the arts are not wanting. 'There are also three steam flouring mills, and one steam woolen mill of some half dozen looms, that furnish employment for a number of hands, and convert the produce of the country into marketable commodities.

Princeton also is situated on the Fox river, a few miles above Berlin. It has an extensive trade and is a thriving village. It has an iron foundary, a flouring mill, wagon and other shops. Marquette is a river town of considerable trade, especially in lumber and grain. Markesan is an inland village surrounded by a very rich and fertile country; has a good water power, a prosperous trade with the surrounding country, and only needs railroad facilities to make it one of the finest points in this part of the state. Dartford the county seat, is situated on the outlet of the lake, from which the county derives its name. It has a beautiful location, overlooking the lake, and, besides, the court house, jail and county offices, has two flouring mills and the usual variety of mechanic's shops. Kingston and Manchester are inland villages with each a flouring mill, and they are, each of them, the center of some trade.

The lake, from which the county takes its name, is considered one of the most beautiful sheets of water in the country. It is twelve miles in length and from two to three in width. The waters are very deep and pure, and of a very beautiful light green color—so clear that the bottom can often be seen at a depth of twenty or thirty feet. The shores nearly always high and dry—though not as wild as those of Lake George, or as tame as those about most western lakes—are strikingly beautiful.

There are within the county 96,094 acres of improved lands, producing in 1870, 536,185 bushels of wheat, 15,057 bushels	
producing in 1010, 000,100 business of wheat, 10,001 business	
of rye, 252,916 bushels of corn, 297,611 bushels of oats, 16,731 bushels of barley, 89,659 bushels of potatoes, 119,423 pounds of wool, besides butter, cheese, hay, hops, etc., amounting to

of wool, besides butter, cheese, hay, hops, etc., amounting to	
an estimated value of	
Value of manufactured articles	65
Total \$2,204,8	97

The surface of the county is undulating, no part of it can be called hilly, neither is but a small portion of it level. Brooks and creeks, and small lakes abound in every portion, and, except along the Fox river, water powers are found in nearly every town.

Should the county progress in the future as it has in the past, though it may not rise to the position of first in the state, yet it will be one of which its citizens need not be ashamed, and one which will bring no discredit to the state of Wisconsin.

### IOWA COUNTY.

Iowa county is located in the southwestern portion of the state, in what is commonly known as the lead region. The Wisconsin river forms its northern boundary, Grant county lies on the west, La Fayette on the south, and Dane on the east. In common with the neighboring counties, where lead is found, the development of its agricultural resources, and a system of general industry, was retarded by the almost exclusive attention paid by the early settlers to mining; but within the past few years great advancement has been made in this respect, and now the county ranks as the thirteenth county in the state for the aggregate value of her agricultural productions. There are 170,147 acres of land under cultivation; from these were raised, according to the census of 1870, of wheat, 767,875 bushels; oats, 829,470; corn, 689,211; butter made, 555,181 pounds; with the usual variety of other crops in proportion. The population of the county is 24,555. There are neither state or government lands unsold in the county.

The railroad facilities are good. There is a road running to Chicago from Mineral Point, and the Milwaukee and Prairie du Chien running the whole length of the county on the north. There are quite a number of lead ore furnaces in the county, and one zinc ore furnace, making as good a quality of zinc as can be found in the world. It is made from black jack and dry bone, two kinds of ores that were useless rubbish until the above

named furnace was built. A large amount of zinc ore is shipped to La Salle, Illinois, St. Louis and other places. The central and western portions of the county contain agricultural lands of the very best quality; and where the land is broken and hilly, the Welsh and Norwegians, interspersed with Americans and other nationalities, in their search for good water and pasturage, have made it a very garden.

## JACKSON COUNTY.

#### BY 8. W. BOWMAN.

The population of the county, as given by the last census, is 7,712. The surface of the country is generally good; in the western and northern portions it is high, rolling land, with oak timber on the ridges. Some swamp lands are to be found in the eastern part of the county. The east half is a sandy loam, while the west half is of a black loam. The county contains 640,000 acres of land, 80,000 of which is under cultivation. Of the balance 200,000 is capable of cultivation. About 160,000 acres are owned by actual settlers at an average price of \$5 per acre. Owned by the United States, and subject to entry under the the homestead law is 120,000 acres, and located in the west part of the county; 150,000 acres is owned by the West Wisconsin Railroad Company, worth from two dollars and twenty-five cents to eight dollars per acre. Black river runs through the county from the northeast to the southwest, also numerous small streams tributary thereto, also the Trempealeau river in the west side. The water-power is somewhat improved, but capable of ten fold more improvement. Above Black River Falls is an extensive deposit of iron of an excellent quality, and in quantity sufficient to supply the north half of North America. There is a great abundance of the ore, which must ultimately be a great source of profit to this section of our state. There are some fine stone quarries and brick yards carried on quite extensively. Black and Trempealeau rivers traverse the county, but are not 4—Ім. Сом. (Doc. 14.)

navigable. Game and fish of all kinds abound. The West Wisconsin railway runs southeast and northwest through the county. Lake Pepin railroad is under construction, and will also pass through the county. Lumbering and farming are the principal vocations of industry. Climate temperate; water not so hard as in many parts of the State.

## JEFFERSON COUNTY.

### BY HENRY COLLINS.

Jefferson county is an interior county in the state, not exactly central as regards territory, but nearly so as to population. Its surface is gently rolling or undulating, interspersed with woodlands, prairies and openings, with no deep valleys or barren hills, but abundantly watered with lakes, rivers, creeks and springs, and thickly covered with heavy forests containing a choice variety of timber fully sufficient not only for fuel but for manufacturing purposes. Soil rich and well adapted for wheat, barley, rye, oats, potatoes, fruit, etc. There are 368,640 acres of land in the county; about two-thirds of all lands are under cultivation, about three fourths of the balance is capable of cultivation. Nearly all lands are owned by actual settlers and held st an average price of thirty dollars per acre. Owned by the state are 4,360 acres, located in the central part of the county. Jefferson county is one of the best counties in the state so far as respects facilities for water power. Brick are manufactured from clay heds of excellent quality and color, comparing favorably with the cream brick of Milwaukee. Several streams and rivers run through the county, none, however, navigable. But little game is to be found. Railroad facilities are good, and future prospects encouraging. Various kinds of manufactures diversify the pursuits of the different classes of society, giving remunerative employment to capital and labor. We may add that there are several mineral springs, possessing medical qualities, located at Waterloo and Watertown.

## JUNEAU COUNTY.

ij

I

ſ

BY C. F. CUTLER, T. J. HINTON AND GEORGE R. NICHOLS.

Owing to the fact that the central and northern sections of the county are for the most part engaged in the manufacture of lumber and other productions of the forest, its agricultural resources have been but partially developed. Still the population is increasing and settlements and villages are dotting the entire county. Its general surface is undulating, and its quality of soil varies from a rich loam to sand. The county contains 550,000 acres, and has 25,000 under cultivation. Bona fide holders own about 15,000 acres, worth ten dollars per acre. The state owns 125,000 acres of land, worth from fifty cents to one dollar per acre, consisting of low meadow lands and cranberry marshes. Several parties are at present engaged in preparing the ground for the cultivation of this fruit. Certainly no county in the state presents equal advantages in the carrying on of this branch of industry. The general government owns, subject to entry under the homestead laws, about 125,000 acres, including railroad lands. power is but little improved, but there are great facilities for extensive improvements. The forests are timbered with pine and hard wood timber. Stone quarries are worked with success in many parts of the county. Several small streams traverse the county, the Wisconsin being the only one navigable. Fish and game are found in large quantities. The Milwaukee and St. Paul Railroad runs through the county from east to west, and the Chicago and Northwestern up the Baraboo valley. From Mineral Point are lines projected, and some of them will pass through the county, without doubt. The lumber interests occupy a very prominent place in the resources of the county. Iron and copper mines are known to exist, but are not worked. The climate is healthy, the water soft, and withal it bids fair to keep pace with its sister counties in population, wealth and intelligence.

## KENOSHA COUNTY.

#### BY F. NEWALL, SALEM.

Kenosha county is strictly an agricultural county. There is little machinery driven by water power, and but five places deserving the name of villages. Kenosha is the only place of trade of any note. Small places perhaps the germ of future villages, may be noticed at the different depots along the line of the Western railroad. In fact, at several of these depots, a large amount of trade has already sprung up, in cattle, sheep and swine, and the various productions of the farm. Warehouses for the storage of grain, superseding the huge buildings on the lake shore, have been built at several stations, and most of the marketing of grain is done at these places, so that little or no grain is shipped at the lake port.

At one of these stations a planing mill, a sash and door factory, a grist mill and a cheese factory are now in operation. Yet at the present time, the principal manufactures, aside from cheese making, are found at Kenosha. The productions of the different departments of labor during the past year, in Kenosha alone, at establishments which may properly be called factories, were valued at \$881,105.

The manufacture of lumber wagons may be considered the leading industrial pursuit. The productions of these establishments at Kenosha, are valued at \$348,855. At Wilmot, 150 wagons are yearly made, valued at \$12,000, one shop employing 150 men.

The two foundaries at Kenosha produce \$200,000 worth of thimble skeins, boilers and repairs. At the tanneries \$163,550 worth of leather and skins was the product of 1870. The malt houses give \$138,000 as their yearly product. Breweries, \$28,000. The fishing interest at Kenosha, or adjacent thereto, are valued at \$12,476 yearly. Match factory about \$30,000.

Pressed hay, to the amount of 1,750 tons, valued at \$26,250, is yearly put up. The lumber interest amounts to 8,000,000 feet of pine and 1,000,000 feet of hard lumber. Two thousand cords

of wood and 3,000,000 shingles. One factory exports yearly 2,000 bales of flax, valued at \$12,000. The several establishments for the manufacture of boots and shoes for home and foreign trade is very considerable. The business at the different shops where harnesses and saddles are manufactured, is quite satisfactory to the manufacturers, and furnishes quite an item of trade in Kenosha.

The valley of the Fox river and the Des Plaines, together with the numerous small lakes and streams, furnish abundant water for grazing purposes; accordingly Kenosha county largely excels in the dairying business. Some 20 different establishments on the factory principle, are engaged in the manufacturing of cheese. Although some are in their infancy, yet about 687,000 lbs., were manufactured last year, valued at \$85,800. Other factories are soon to be started, and the dairy business will lead the agricultural interest of the county. In the above statement we do not include the farm dairying of the county. On very many farms, where several cows are kept a sufficient supply of cheese is made for home consumption. The amount of butter annually sold exceeds in value that of wheat.

The number of acres under the plow falls but little short of for-But there are less acres devoted to wheat. mer years. ing of corn is largely on the increase, not for export but to be fed on the premises. The beef, pork and sheep sent to Chicago last year by railroad, amounted to 150 car loads; in value, \$100,000. In addition to the above, a large number of cattle, sheep and swine were driven to Milwaukee and elsewhere. Stock raising is beginning to attract the attention of the best farmers in the county. The thoroughbred "short-horns" are believed to be the best to cross with our native stock. The low price of wool has materially dimished the demand for sheep, and the number of fine wooled sheep has very much lessened within two or three years past. Yet, the value of the wool crop in Kenosha county amounted to nearly \$60,000 for 1870. It is believed, however, that the demand for wool will be sufficient to induce farmers to continue raising this important staple of our country.

The fruit of Kenosha county begins to attract considerable at-

tention. Apples are yearly becoming more abundant, and as the soil becomes more drained and better tilled, the apple crop will be most certainly ample for the wants of the community. At one mill there were fifty barrels of cider made last year, and 300 barrels in the whole county; a quantity sufficient to give every man, woman and child a bowl of "old orchard," relished perhaps by many next to "old rye."

Numerous attempts have been made to manufacture sorghum, but that branch of labor is nearly abandoned. Every year new branches of trade and manufacture arise, adding another demand for labor, and opening new channels for investment; among these may be found the manufacturing of cheese boxes.

It would exceed the time and space we designed to fill to particularize the trade in fanning mills and pumps, which furnish labor for a number of men, and articles for the surrounding country. Suffice it to say, the genius of the American people will never fail to find new sources of employment, when old ones become overworked or non-productive.

### KEWAUNEE COUNTY.

### BY EDWARD BEACH.

Kewaunee county is situated on the shore of lake Michigan, one hundred and ten miles from Milwaukee. The general topography of the county is rolling. The quality of its farming lands is excellent, though some swampy, yet when drained is susceptible of producing equal to the uplands. In the eastern part of the county the soil is of a clay loam, but as you approach the west line of the county it is mixed with gravel and sand. There is hardly an acre of land in the county but what is capable of cultivation. Actual settlers are in possession of about 150,000 acres of land; the balance is held mostly by speculators. The county is heavily timbered; the varieties are principally oak, beach, maple, basswood, elm, cedar, pine, hemlock and tamarack. Owing to the facilities for water transportation, lumber and tim-

ber find a ready market. Railroad facilities are as yet prospective. About 21,000 acres of land are in the hands of the state. Agriculture and lumbering are the principal sources of industry. Climate, healthy; vegetation, fifteen to twenty days earlier than in many counties of the state. The predominating element is of foreign birth.

# LA CROSSE COUNTY.

### BY P. S. ELWELL WAUHINCIMEZ AND H. N. SOLBERG.

The State of Wisconsin which probably has a larger diversity of interests and embraces a greater variety of elements of wealth than can be found in any other state of the union or in any country or province in the world of similar diminsions, is appropriately represented by the county of La Crosse. About one-third of the county is prairie, and has a very fertile black soil, nearly one third is bluffy, which is remarkably adapted for stock raising, the balance is timber, sand, swamp and poor bluffs; county contains about 300,000 acres of land, 250,000 assessed and 150,000 under cultivation. Nearly seven-eights is in possession of actual settlers, held at an average price of fifteen dollars per acre; state owns 5,000 acres of land, mostly located on the Mississippi river bottoms; owned by general government and subject to entry under homestead law is about 40,000 acres, quality generally being poor, bluffy, swamp and sandy land and located in all parts of the county. We believe no lands are owned by any railroad corporation. Facilities for water powers are good; many of which are improved, and have been made to serve as a valuable item in the commercial interests of the county. The prevailing timber of the forests are black and white oak. Valuable stone quarries are worked, and of good quality. Black and La Crosse rivers traverse the county, though navigable only for logs and Milwaukee and St. Paul railroad runs through the county from east to west, also Winona "cut off" on western boxder. Several roads are in contemplation with encouraging pros-

Ĭ

1

pec:s. Recent discoveries have been made of a considerable quantity of bituminous coal of superior quality, at a depth of about forty-five feet from the surface of the ground. This when developed by capital must prove of incalculable benefit to the resources of the county. Manufacturing, agriculture and lumbering are the principal sources of industry; climate invigorating and healthy, and water pure.

# LA FAYETTE COUNTY.

BY SAM. E. JCHNSON.

This is one of the first settled counties in the State, but its life and prosperity received but little impetus until within the last decade; nearly all of the principal agricultural resources have been developed within this period. The general topography of the country is undulating. The soil is an admixture of black loam and clay. County contains 397,366 acres of land, three-fourths of which is under cultivation. Nearly all, however, is capable of the highest cultivation. All the lands are in possession of bona fide holders, except a few small tracts, which are owned by the state, lo. cated in town ten, range four east, in section sixteen (16.) Water facilities are excellent, but only used in the running of flour mills, no other kinds of machinery of any account being used. Agriculture is the leading industry of our county, yet a large number are engaged in lead mining, which is carried on with perfect sys-Lead is found in all positions, and in every town of the county, the largest mine being at Shullsburg. Lead is principally found in crevices in rocks, mixed with clay and sand. Copper has been worked with but little success. The carbonate of zinc is found in most of our lead shafts, but has never been put to any The prevailing timber is oak, walnut, maple, hickory and ash. Picatonaca, Galena and other branches traverse the county, and are stocked with black bass and pickerel. The Illinois Cen. tral railroad runs through the county north and south, nearly in There is a very favorable prospect that the Monroe its center.

branch of the Milwaukee and St. Paul railroad will be extended to the Mississippi, running through the county east and west. Farming and mining are the principal sources of industry. The county offers but small inducements to immigrants with limited means.

# MANITOWOC COUNTY.

BY JOHN TRANZ.

On the western shore of lake Michigan, about midway between Chicago and Mackinaw, is the county of Manitowoc. The surface of the land is rolling and well watered by creeks, rivers and small lakes. The county contains 379,325 acres of land, of which 128,649 is under cultivation. The population, according to the last census, is 33,369, most of whom are of foreign birth, principally Germans. In possession of actual settlers is 284,400 acres, worth from fifty to seventy-five dollars per acre. Owned by the state is about 3,000 acres, lying in the west and south part of the county, to be had at government price of one dollar and twenty-five cents per acre. Splendid water power with every natural facility for greater improvement, and the cheapness of all raw material for manufacturing purposes, has induced capitalists to invest in manufacturing; which is carried on to considerable extent. This probably was one of the heaviest timbered counties in the state while it remained a virgin forest. Some of the best oak timber in the state has been shipped from Manitowoc county. A marble bed has been discovered about five miles from the city of Manitowoc, on Manitowoc river, and can be easily transported. Manitowoc, Mishicott and Neshota rivers run through the county and empty into lake Michigan, all navigable up eight miles from their mouth. The catching and transportation of fish to eastern and southern markets enters 'largely into the products and industries of the county. Our railroad interests are only prospective, yet of the most encouraging nature. The Appleton and New London road is now finished to Appleton, and

•

a portion of the Lake Shore road from Milwaukee to Green Bay is being rapidly extended. The building of these roads are beyond doubt, and Manitowoo has given liberally to secure these roads, and will soon join hands with the leading railroad corporations of the state. Manufacturing of the most numerous kinds, together with agriculture are the principal sources of industry. The climate is milder in winter and cooler in summer than in the western part of the state.

# MARATHON COUNTY.

BY W. C. SILVERTHORN.

Marathon county is the largest county in the state, it is one hundred and twenty miles in length and fifty-four in width, contains ninety-seven townships and about 4,000,000 acres of land. The soil is very rich and well adapted to agricultural purposes. It is generally of a black loam, resting on clay and covered with vegetable mould. There are not over 50,000 acres under cultivation. Owned by the state is upward 20,000 acres, being mostly school and University lands, and can be purchased for about three dollars per acre. There is probably haif a million of acres still belonging to the general government subject to entry either by purchase at one dollar and twenty-five cents per acre, or to be entered under the homestead law, principally in the northern part of the county.

Water power is abundant, but comparatively few improvements have been made.

Small capital could be invested with remunerative returns. Iron, copper and lead are known to exist, but not developed. The principal varieties of timber are pine, oak, maple, ash, elm, hemlock, etc. Large quantities of granite quartz rock are found but not worked to any great extent. The Wisconsin river runs through the center of the county from north to south, and with its numerous tributaries affords abundant and reliable water power. The county contains within its boundaries innumerable

3

1

F

f

1

ļ

small lakes, filled with all kinds of fish. No railroad passes through the county, but no less than ten lines are surveyed, and our prospective future in this direction is very encouraging. The principal articles of manufacture are lumber and shingles, which also constitute our chief exports. There can be no doubt that this county offers inducement to settlers equal, if not superior, to any in the west. The rush of immigration west of the Mississippi has caused this county to be overlooked to a great extent, but is rapidly being settled. Choice lands can be bought at from ten to three dollars per acre. The pineries afford a good market for all farm products. The climate is remarkably healthy; atmosphere is pure and dry: the water soft, pure and abundant.

# MARQUETTE COUNTY.

BY HON. S. A. PEASE, MONTELLO.

The whole country is openings and timber; the soil is diversified clay and loam, with considerable sand, and extensive marshes furnishing abundance of natural meadows and pasture. The county is well watered with springs, small creeks and large mill streams. There are ten flouring mills, four woolen factories, two sawmills and one iron foundry in the county. Fox river runs through the county from east to west, with two thriving villages upon its banks—having four warehouses for grain and other shipping purposes. There are nine villages in the county, all of them well supplied with business houses, and well patronized.

Montello is the county seat, with a large and commodious court house, built of stone and brick, two churches, stores and mechanics shops, two flouring mills and a woolen factory. Montello is situated upon Fox river, where we have a regular line of steamboats from Berlin down the river. The Montello river, a large mill stream, empties into the Fox at this place, and furnishes power for one-half mile of machinery, which is not one-fourth part improved. The inhabitants are made up of one-third Americans,

one-third Germans, and one-third Irish. A large majority of the settlers came in poor, and are now in good circumstances, some of them getting rich. Land is worth from five to fifteen dollars an acre; and there can yet be found good chances for several hundred families to make good homes, with a very little money. In less than three years we expect to have from one to three raffroads running into or through Marquette county, which with the ship canal along the channel of the Fox river, will give Marquette county transportation and market facilities, not excelled by any county in the state.

The people in this county are healthy and happy, and others who come amongst us to live, will be made to enjoy all the blessings we have enumerated.

## MILWAUKEE COUNTY.

(From the Immigration Pamphlet of 1870.)

This county contains about 152,000 acres of land, of which about 9,000 acres lie within the corporate limits of the city of Milwaukee. Four-fifths of the entire amount of farming lands are under improvement, and together with the unimproved lands, which are mostly timber, and often more valuable than the improved, have an average value of \$75 per acre.

The present population of Milwaukee county (1870) is 89,936, of which the city of Milwaukee contains 71,461.

As there are no public lands in Milwaukee county, its statistics will be chiefly interesting to immigrants, as they set forth the opportunities for procuring a livelihood in the different mechanic arts and the occupations attendant thereon.

To the skilled artisan who intends to emigrate and follow his calling or occupation, the city of Milwaukee affords employment to large numbers in its foundries, machine shops, its furnaces and rolling mills, railway repair shops, in the manufacture of furniture, of barrels and all descriptions of cooperage, of boots and shoes, of clothing, and the numerous other, no less useful but minor handicrafts.

For the common laborer, employments are to be found on the docks, in the lumber yards, breweries, freight warehouses, grain elevators, on its railways, in the stores of the wholesale merchant, and the various labors incident to the building up of a young and flourishing city.

1

The annual report of the Chamber of Commerce for 1869, shows the assessed valuation of real estate and personal property in the city of Milwaukee to be \$43,493,313. In extent of marine commerce it ranks as the fourth city in the United States. The number of entries at the custom house during the year were 4,878, with a total tonnage of 1,974,119 tons, and of clearances 4,877, representing an aggregate tonnage of 1,938,414 tons.

The receipts of grain for the year 1869 were 19,407,054 bushels, of which 17,745,238 bushels were wheat.

The receipts of flour were 807,763 barrels, and the amount manufactured in the city 481,511 barrels; total 1,289,274. The shipments of wheat to eastern and Canadian markets during the year amounted to 14,272,799 bushels, and of flour to 1,220,658 barrels.

The total number of hogs packed in the city during the season just closed was 175,000.

The total receipts of foreign merchandise, exclusive of rail-road iron, pig iron, salt, plaster and coal, received at Milwaukee during the year 1869, were 111,256 tons.

Of railroad iron there was received 31,601 tons, 9,000 tons additional were manufactured there, making a grand total of 43,601 tons, worth \$80 per ton, the sum of \$3,488,080 12,180 tons of pig iron were received during the year, and 4,695 tons of iron ore.

Thus it will be seen, very succinctly stated, the business annually transacted in the commercial emporium of Wisconsin, and which is annually increasing with that marvelous rapidity incident to the rapid settlement of the western world.

Milwaukee contains between fifty and sixty churches, belonging to various denominations, has nine large and elegant public school buildings, where the children of the poor and the rich are alike educated free of expense. For salubrity of climate it is

unsurpassed in location, and the annual death rate per thousand is less than that of either of its neighbors, Chicago cr St. Louis.

Situated as it is, with its great facilities for lake commerce, and the thousands of miles of railways radiating throughout the great northwest, it cannot fail to continue to be, what it now is, the commercial emporium of Wisconsin, and one of the three great business centers of the northwestern United States.

# MONROE COUNTY.

BY O. R. DAHL.

Monroe county was organized as a county in 1854. The last census (1870) shows that there are now twenty-one organized towns in the county, containing a population of 16,552.

The general surface of the country is bluffy in the south and central portions; the eastern and northern portions are covered mostly with pine lands, and the western central portion is a beautiful prairie commencing at the head of the La Crosse river and running southwesterly to the Mississippi river.

The county contains 575,000 acres of land, the appraised value of which, on the assessment roll, is \$1,783,524. About 50,000 acres of land is under cultivation. Actual settlers own about two-thirds of the land, held at an average price of seven dollars per acre.

The state owns 6,299 acres of school lands, and 18,158 acres of swamp land. The swamp lands are, for the most part, located in the northeast portion of the county. Part of the swamp land consists of excellent hay and cranberry marshes. The general government owns about 4,000 acres, subject to entry under the homestead law; quality of the land not being very good; and located in the northern and southern parts of the county. The soil is varied, a large portion being of a sandy character, and the balance loam and clay. The half west of the dividing ridge is composed of ranges of bluffs and valleys, the valleys being exceedingly rich and productive, producing the

best spring and winter wheat in the state. The valleys are well supplied with streams, which are filled with speckled trout and other small fish.

C

The facilities for water are good, and sufficient for the manufacture of all raw material.

The prevailing timber is white or Norway pine, tamarack and spruce, oak, basswood and maple.

The Milwaukee and St. Paul and the West Wisconsin are the two railroads running through the county.

There are two artesian wells at Sparta, the county seat, one of which has strong medical and the other magnetic properties.

The climate is healthy, atmosphere invigorating, and the water pure and soft.

# OCONTO COUNTY.

### BY A. B, WHEELOCK.

Oconto county is bounded on the east by the waters of Green Bay and Menominee river; the first navigable for sail vessels and steamers of the largest size. Oconto county embraces an area of over four thousand square miles. The whole surface of the county is traversed and drained by numerous streams. The northwestern portion of the county is broken and rocky, the southeastern is rolling, while near the shore of Green Bay it is level; the soil is principally of a sandy loam. The largest portion of the county is still owned by government, as the investment of capital has been almost wholly confined to pine lands. The government sells its land at from seventy-five cents to one dollar per acre. The actual settler has the right of preemption to one hundred and sixty acres for one year before he is obliged to pay for his land. Several rivers and small streams traverse the county, used principally as highways over which float the logs and timber for the different mills. They afford unlimited water power, the value of which is fast being appreciated. Fish and game abound of all kinds and varieties. Railroad matters are only prospective. The principal sources of industry are farming and lumbering. The climate is healthful.

# OUTAGAMIE COUNTY.

Agriculture is the prominent interest in this county, for which the configuration of its surface, the fertility of its soil, and its accessibility to market are especially adapted; yet it has equal facilities for manufactures, which will be fully developed at no distant day. The water-power furnished by the lower Fox, which passes through its southeastern corner, and by the Wolf river and its many tributaries, are unexcelled, either in extent or availability. It has also an abundance of material for manufacturing purposes in the heavy timber with which a large portion of the county is covered.

The county has an area of sixteen townships, of which 75,935 acres are improved. The soil is principally a black loam, with a subsoil of stiff clay. There is considerable low, or swamp land in the county, but a large portion of it is susceptible of drainage, and will eventually become the most fertile and productive land of the state. Wheat is largely cultivated; the census returns of 1870 give a total of 353,187 bushels. Next in importance are oats and corn; of oats, 200,000 bushels were raised; of corn, 56,331 bushels; potatoes, 66,725 bushels; wool, 34,799 pounds was grown; butter, 282,704 pounds were made. The sum total of our agricultural productions foot up \$1,788,224. The population of the county is given as 18,400.

Appleton is the leading city of the county, and is the seat of a large manufacturing business. It has a population of about 5,000.

The Fox river in its present condition furnishes a good outlet for the productions of a large portion of the county; but when the proposed ship canal is completed and the railroad connections are made as contemplated, we shall have as good and direct market facilities as any portion of the state. The county presents rare inducements to all who are in search of cheap but fertile farms, for pleasant, comfortable homes; or for opportunities for the investment of capital in manufacturing enterprise.

### OZAUKEE COUNTY.

#### BY GUSTUS GROTZ.

Nearly three-fourths of the inhabitants of this county are of foreign birth. Some of the best land in the state is to be found in Ozaukee county. The general topography of the county is of an even surface, though in portions somewhat rolling, and a small section is swampy. The soil consists of a black sand, with admixture of red and gray clay. The county contains about 180,000 acres of land, more than one-half of which is under cultivation. Of the total number of acres, seven eighths are owned by actual settlers, and is valued at twenty dollars per acre, as an average price. Our quarries consist of white sandstone; seven are in successful operation. The Milwaukee and Northern Railroad runs through the quarries, furnishing excellent facilities for shipping the stone.

The Milwaukee river flows through the entire county, from north to south, on which are many good water powers. Also on Cedar creek, which empties into the Milwaukee river. The principal timber is white and red oak and maple. Agriculture is the main source of industry. Climate, temperate; water, pure.

#### PEPIN COUNTY.

### BY L. D. BAKER AND S. P. CROSBY.

Pepin lies in the northwestern part of the state, its western border being on the Mississippi, at Lake Pepin. The surface is somewhat rolling. The soil is mostly of a sandy loam, though 5—Im. Com. (Doc. 14.)

in some sections mixed with clay. County contains in the vicinity of twenty-five thousand acres of land, about one-third under cultivation; of the balance nearly all is capable of cultivation. Actual settlers are in possession of nearly twelve thousand acres, worth from three to five dollars per acre. The state owns only a few hundred acres in the town of Waterville. Subject to entry under the homestead law, is nearly 8,000 acres, located in the towns of Lima, Albany and Waterville. A few sections of land are owned by the West Wisconsin Railroad Company, for sale at one dollar and and twenty-five cents per acre. Good water privileges are to be found in every town in the county. The forests are heavily timbered with all kinds of hard wood. The Chippewa, Eau Claire and Menominee rivers traverse the county, and are to some extent navigable. The larger kinds of fish are found in the Chippewa, and abundance of trout in the smaller streams. Agriculture is the principal source of industry.

# PIERCE COUNTY.

#### BY A. B. WARNER.

Pierce is the most western county in the State, lying principally in the southern portion of the St. Croix valley. bounded on the north by St. Croix county, east by Dunn, south by Dunn, Lake Pepin and the Mississippi river, and west by the Mississippi and Lake St. Croix. The general surface of the country is undulating though somewhat bluffy along some of the streams. On prairies the soil is of a sandy loam; on timbered lands is generally of a clay loam. County contains 367,000 of land. The estimated number of acres of land in county owned by actual settlers is about 100,000 acres. The State owns 40,000 acres of land located in every part of the county. Quality of land good; worth about \$1.25 per acre. But a small portion of government land is left for entry under the homestead The West Wisconsin Railway Company holds about law.

25,000 acres under land grant; lands not in market. The county is well watered, and divided by seven rapid flowing rivers running the whole length of the county. All of the rivers have good mill sites at short intervals their whole length. There also are numerous creeks and small streams which discharge into the rivers, some of which have sufficient fall for mill sites. The varieties of timber are oak, ash, maple, basswood and elm. No railroads are constructed within our county. On our western and southern boundary are the St. Croix lake and Mississippi river and Lake Pepin, which give us a water front of tifty-seven miles, thus giving us fair facilities for shipping all our surplus products. Lead has been found in limited quantities.

### POLK COUNTY.

BY J. W. DEAN.

Polk county is one of the northern agricultural counties of the state. The soil is principally clay, though in some parts of a sandy loam. County contains 700,000 acres of land, a part of which is rich prairie, and upwards of 100,000 acres is owned by actual settlers. Nearly all lands are owned by government and subject to entry under the homestead law. The northern and eastern townships of the county contains vast quantities of valuable pine timber, and the lumber business is one of the princi-The principal water power is on the St. Croix pal features. river at St. Croix falls, at present it is un-improved. The county is well watered, several small streams traversing the county, filled with brook trout and other fine fish. County abounds in lakes, the largest containing an area of from three to six miles.

Railroads are needed to develop the resources of the county; the future prospects however, are full of encouragement, no section in the state offers better inducements for the investment of capital. Emigrants an fast seeking and settling homes, giving indication that the county is well adapted to agricultural pursuits.

Lumbering in carried on to considerable extent, one of the special advantages offered by Polk county is the natural meadows which are found along on all the streams and many of the lakes from which hundreds of tons of hay are cut annually.

# PORTAGE COUNTY.

#### BY J. PHILLIPS OF STEVENS POINT.

This is the most central county of the state, and although its resources are far from being fully developed, it already holds the first rank on the upper Wisconsin in regard to position, soil, climate and commercial advantages. It is thirty miles in length, north and south, and about thirty in width. The southern and eastern portions of the county contain a majority of the inhabitants, the northwestern part being composed mostly of heavy timbered lands. The number of townships in the county is twenty-two.

Our agricultural resources, while they cannot, for obvious reasons, compare favorably with those of the older and more thickly settled portions of the state, are nevertheless far in advance of the estimate formerly placed upon them. There is very little waste land in the county—the few swamps and marshes which it contains being susceptible of drainage, whereby they may be made equal or superior to the best farming land in this vicinity. The soil in some portions of the county is a light sandy loam, yet it is quite productive in favorable seasons, and under judicious management will doubtless be susceptible of great improvement. In the eastern portion of the county the soil is probably as good for farming purposes as in the northern portion of the state.

The number of acres at present under cultivation in the county, is 61,079. Amount of wheat raised during the year ending June 1, 1870, 210,139 bushels; rye, 59,309 bushels; corn, 64,022 bushels; oats, 152,143 bushels; barley, 6,137 bushels; potatoes,

113,976 bushels. Amount of wool produced during the same year, 25,987 pounds; butter, 199,517 pounds; cheese, 7,936 pounds; hay, 9,652 tons; hops, 70,074 pounds.

The total estimated value of all farm productions for the same year, is \$643,757; the value of manufactures (chiefly lumber) produced, \$522,742.

Owing to an idea which has prevailed very extensively, that our sandy soil and long winters would prove an insuperable obstacle to the raising of fruit, very little progress has been made until quite recently, in that direction. It has now, however, been proved beyond a doubt, that many of the hardier varieties of fruit can be as successfully raised here as in any portion of the state. At the last county fair, fifteen varieties of apples, all excellent and of fair size, were exhibited, from the farm of Hon. Geo. Cate, in the town of Amherst. The flourishing orchard and nurseries of Mr. Frank Felch, in the town of Stockton, also affords abundant evidence of the possibility of fruit-raising in Portage county. A large number of trees have been set out by our citizens, and a few years will doubtless witness a vast increase in the amount of fruit raised in this vicinity.

We have a sufficiency of good stone for building purposes. The white and grey sand-stone, of which the court house now nearly completed at Stevens Point, is composed, affords a fine illustration of our resources in the way of building material.

The manufactures of the county are thus far confined to the single article of lumber, of which a great amount is annually produced. The number of saw mills in the county is about twenty-five, many of which are steam mllls of large capacity, employing a great number of workmen.

The internal improvements of the county are creditable in their character; a fine bridge has been built across the Wisconsin at Stevens Point, at a cost of over twenty-two thousand dollars. We have from 15 to 20 church buildings in the county, and capacious and convenient school edifices in nearly all our towns. The court house at Stevens Point is a fine stone building, now nearly completed, at an expense of thirty thousand dollars; its elegant architecture and proportions would not do dis-

credit to any of our large cities. The Wisconsin Central Rail road traverses the county, and there are two or three others in process of construction, whose advent is confidently expected within a year or two at farthest.

With additional railroad facilities at our command, a new era of prosperity will doubtless dawn upon our county, and a few years to come will see her holding a prominent rank among the foremost counties of the state.

## RICHLAND COUNTY.

#### BY F. A. HATCH.

Richland county contains sixteen townships of land, government survey. The general topography of the county is rolling. The general quality of the scil is good. The soil of the timbered land is a rich, dark, sandy loam, easy of cultivation, and producing a rapid growth of vegetation. The county contains 368,648 acres of land, one-third of which is under cultivation. Over 100,000 acres are in the possession of actual settlers, and worth from twelve to fifteen dollars per acre. The state owns land in nearly every township; for sale at one dollar and twenty-five cents per acre.

The water power of the county is abundant, though but partially improved. Pine river, Mill creek, Knapp's creek, Kickapoo river, Willow creek and Little Baraboo river, with other small streams, afford excellent power for machinery, which can be used as the development of the county requires. Pine river is navigable from Richland Center to the Wisconsin river.

Lead has been discovered in Orion township, in the southern part of the county, which is now being worked with fair profits.

Iron is found in several localities in the county, in large deposits, easily accessible.

Copper has also been found in small quantities.

Nearly three-fourths of the county is heavily timbered with black and white walnut, and other varieties.

The stone quarries are excellent, but have been little used, except to supply the home demand. A species of white marble has been recently discovered, which is susceptible of a fine polish, and is believed to be valuable for most purposes for which the eastern marble is now used.

The Milwaukee and Prairie du Chien railroad passes through the southeastern corner of the county. A new road is in contemplation from Mineral Point to Tomah.

Agriculture is the principal source of industry. This county offers good inducements to immigrants.

# ROCK COUNTY.

BY HOW. ALEXANDER GRAHAM, JANESVILLE.

This is one of the oldest counties in the state, the first settlement being made in 1835, and in 1839 the county was organized, the seat of justice being established at Janesville. It now contains a population of about forty thousand.

It comprises one of the best agricultural districts in the Northwest. Its soil, climate and commercial situation are equal to any other in the West, and there is scarcely an acre of land within its limits which cannot be used for agricultural purposes. In the brief space of thirty-five years the entire county has been opened up to cultivation, and over its entire surface may be found homes of comfort and beauty.

The farms in this county range in value from ten to one hundred dollars per acre, and are sought for, not so much by emigrants seeking cheap lands, as by those desiring beautiful homes, where they may at once enjoy all the comforts and conveniences to be found in the older and more wealthy portions of the country.

Rock county is better adapted to the growing of grain than of grass, and every year marks a decided progress in the mode of tillage, and the consequent increased quantity of production.

The wicked and ruinous practice of many farmers of burning the straw and manures, instead of returning them to the soil in compensation for its rich harvests, has been abandoned. Wheat is the great staple of production, it being estimated that in a single crop the production of the county was not less than three millions of bushels.

Corn, barley, oats and all the coarser grains grow in rich abundance, amply rewarding the husbandman for his toil.

Notwithstanding Rock county is better adapted to grain growing than stock raising, our farmers are giving considerable attention to the breeding of stock, and acting upon the correct idea that it costs no more to raise a blooded animal than a "dunghill," are constantly introducing the best varieties, and at the county fairs may be seen horses, cattle, sheep and swine, animals as noble as almost any other section of the country can exhibit.

The surface of Rock county is undulating and is drained by the Rock and Sugar rivers, with their tributaries, nearly all of which are of sufficient size to furnish water power for manufacturing purposes, and are more or less improved. Rock, one of the most beautiful rivers, as well as one of the very best mill streams in the West is already used largely for manufacturing purposes, and every year is attracting more and more attention of men of enterprise and capital; when fully improved its power for the propulsion of machinery is almost exhaustless. The facilities for manufacturing in Rock county by water power are but partially improved, and yet she ranks among the first in the West, her annual manufactured product being worth not less than three millions of dollars, consisting principally of flour, agricultural implements, paper, woolen fabrics, cabinet ware, lager beer, etc.

Rock county is pierced east and west, north and south, by the Milwaukee and St. Paul and Northwestern railways.

### RACINE COUNTY.

#### BY E. T. GOTTSCHADD.

Racine county is bounded on the east by lake Michigan, on the south by Kenosha county, on the west by Walworth, and on the north by Milwaukee county. The general topography of the county is that of an undulating character, rising two hundred and sixty feet or more above the level of lake Michigan. East of Fox river the country is level, but west of the Fox it is undulating and somewhat hilly. On prairie land the soil is of a black loam, with a marl, clay subsoil. The general character of the soil, however, is of an argillaceous loam, rich and deep. The county contains two hundred and eleven thousand eight hundred and forty acres of land; of this amount one hundred and nine thousand acres are under cultivation; about nine-tenths of the land is owned by actual settlers. According to the assessment rolls the land is valued at twenty-two dollars per acre. The state holds in its name only three hundred and twenty acres, with no lands in the county subject to entry under the homestead law. The Fox river runs through the whole breadth of the county, affording excellent facilities for water power, and is improved as fast as the condition of the county requires it. Various kinds of timber are found in the wooded districts, such as maple, beech, oak, poplar and cedar. The stone and lime business is largely on the increase. At the city of Racine, outside the city limits, are inexhaustible stone quarries, out of which is burned the very best quality of lime. Fox and Root rivers are the principal streams running through the county, the latter being navigable some distance from its mouth. Numerous lakes are located in different parts of the county, filled with many varieties of fisb. Railroad facilities are good. The Western Union Railroad runs through the county from east to west. The Milwaukee division of the Northwestern Wisconsin Railway runs along the lake shore through the eastern part of the county north to south. Agriculture, manufacturing and commerce are the principal sources of industry. Climate is changeable, though considered healthy.

### ST. CROIX COUNTY.

#### BY A. A. KELLEY.

St. Croix county contains 466,007 acres of land, about onefourth under cultivation. The general topography of the county is rolling, though in many places swampy and hilly. The soil is of a clay loam, very fertile, producing all kinds of cereals. Actual settlers are in possession of about 165,000 acres; worth \$15 per acre. Land owned by the State is nearly all located in the eastern part of the county. Owned by general government and subject to entry under homestead law, is about 46,000 acres, located in different parts of the county. Water facilities are excellent; the Willow river is a splendid stream of water capable of running heavy machinery at numerous points, and other streams traverse. the county, on which are many good mill sites. Oak, ash, elm, birch and basswood are the principal varieties of timber. Several brick yards are in successful operation. Limestone and stone quarries of good quality, are found in many parts of the county. The West Wisconsin Railway, now completed to St. Paul, runs across the county nearly in an east and west line near the center of the county. This is one of the northern tier of counties, and offers special advantages to emigrants, and all in search of homes.

### SAUK COUNTY.

#### BY ANTON FISHER.

Sauk county is one of the interior counties of the state. Its main physical characteristic is the striking features in relation to its water shed and drainage. "It occupies the great bend of the Wisconsin river, which refused a passage to the Mississippi by the minature mountain ranges known as the Baraboo bluffs, makes its grand sweep to the eastward and rounding their eastern extremity turns an acute angle and endeavors by directness thereafter to make up for its previous loiterings." The general

topography of the county is rolling, if not hilly, but is fully compensated for in the broad and smooth Baraboo valley and Honey valley, which runs diagonally through the county. General quality of the soil good. About one-half of the county lies within the great geological drift range. Here the soil is varied, some excellent and some poor. The county contains nearly twentyfour Congressional townships, equal in area to eighty-six square miles. The number of acres assessed in 1870 was 514,463 acres. About one-eighth is under cultivation. Nine-tenths of all lands are in possession of actual settlers, held at an average price of from \$5 to \$10 per acre. Very little of the land of the county is owned by the general government, and it is so located that it will be some time before entered for homesteads. "Few persons appreciate the value of our water powers, and the unrivalled advantage that in this respect our county possesses. While many water powers in this and other states are losing value from a failure in the supply of water, consequent upon the destruction of timber and the drainage of marshes, etc., the changes which can effect the sources of our water power should increase rather than diminish." At Baraboo the river is dammed four times, from which an aggregate fall of forty feet is obtained. There are but few better powers in the state. At many other points there are excellent mill sites, and power sufficient to run the heaviest machinery.

The only mineral known to exist at present in quantities sufficient to be profitably worked is iron, and is found in different localities in the county, and the supply seems almost inexhaustable. J. T. Smith has a blast furnace in operation, with a capacity of from five to ten tons per day. The county is heavily timbered, especially on the southern side of Baraboo river, with all the species common to the latitude; varieties of oak, maple, basswood, ash, walnut, etc. At Baraboo white brick of good quality are manufactured, and equal to the celebrated Milwaukee brick. We have marble quarries worked to some extent. Several streams traverse the county, only one being navigable, the Baraboo river; Devil's Lake is one-fourth miles in width and three-fourths in length, and is now becoming noted as a watering place probably the most romantic spot in the state.

Fish and game are abundant. The Chicago and Northwestern Railroad runs through the central portion of the county. It is the main trunk of the Northern Pacific Railroad. The Milwaukee and St. Paul Railroad runs along the northeastern boundary, and the Milwaukee and Prairie du Chien Railway along and thorough the southwestern portion of the county. Agriculture is the principal source of industry; climate healthy, almost entirely free from malarious diseases. German immigrants coming here will find comfortable homes. There are German settlements in every town in the county.

## SHAWANO COUNTY.

#### BY CHARLES SUMNICHT.

Shawano county is situated in the northeastern portion of the state. The general topography of the county is rolling. Quality of soil along the banks of streams is a sandy loam, while on the uplands it is a black loam, with a clay subsoil. County contains six hundred and fifty thousand acres of land with forty thousand under cultivation; of the balance five hundred and seventy five thousand acres is capable of cultivation. One hundred and sixty thousand acres is in possession of actual settlers. Located in different townships and owned by the state is about ninety four thousand acres for sale at from \$1.25 to \$2.25 per acre. Owned by general government and subject to entry under the homestead law is two hundred thousand acres, located in the western and northwestern part of the county. Speculators are in possession of considerable quantities of land, while a large tract is owned by the Green Bay Improvement Company.

The county is fertile, yielding good crops of all kinds. Good mill privileges are found on nearly all streams; good clay for brick and other purposes is abundant, and brick are manufactured at reasonable prices. The prevailing timber of the forests, are oak, ash, pine, maple, beach, hickory, basswood and hemlock.

Of the streams that traverse the county, the Wolf is the largest, being navigable up as far as Shawano village. The rivers and lakes are filled with fish of all kinds. Our railroad interests are yet prospective. Lumbering and farming are the principal source of industry. Excellent opportunities will be offered to capitalists to invest in manufacturing as soon as railroad facilities can be had. Thousands of acres of land in this county are waiting for the industrious and hardy emigrant. For a poor man or one with little means this county offers superior advantages.

## SHEBOYGAN COUNTY.

### BY J. H. DENISON, SHEBOTGAN FALLS.

The first settlement in this county was made at the mouth of the Sheboygan river, as early as 1836, but the financial tempest that swept over the land a year or two after, so completely destroyed the new town that in 1840 but a single inhabitant remained. A few families, however, had removed up the river, five miles, to the falls, and in that vicinity they remained, and were the nucleus of a future settlement.

In the beginning of 1844 the population of the county did not exceed one hundred, and it was not until the spring of 1845 that emigration was really directed to this region. Then farmers from New England, New York and Ohio began to locate land and open clearings. In 1846 and 1847 still larger numbers arrived, but many, repelled by the forbidding aspect of so dense a wilderness, hastened through the Sheboygan woods to find some place requiring less toil. About this time the Germans began to arrive and settle in the north and east, and the Hollanders in the south; these with a few from England and Ireland, together with the Americans already on the ground, soon occupied the remaining portions of the county. In 1850 the population had reached 8,000, and in 1855 it rose to 20,000; now it is over 31,000.

The timber on the land along the Sheboygan river, and for a few miles up the Onion river, is pine and hard wood. On the low

land, elm, basswood, ash, etc. That of other portions is hard wood; chiefly oak, maple, leech, ash, etc. There is an occasional swamp of tamarack or cedar, which increase in value as the county becomes older. The surface of the eastern part is undulating, except along the streams, where it is somewhat broken. The western part is cut up by a range of hills and hollows, known as the Kettles, where the soil is either gravel or sandy loam, except the low lands, where it is alluvial. The subsoil is pretty uniformly the red clay, of which the cream colored brick are made. There is little danger that this land will ever wear out, if properly cultivated.

The wheat grown both upon the gravelly soil of the kettles and upon the clay land of the eastern towns is of fine quality, and generally yields well, having been heretofore the farmers' chief dependence. The crop in the year 1869 amounted to 570,000 bushels. The amount of oats, corn, rye and barley together would double this sum. Green peas are grown considerably here, of which nearly 40,000 bushels were exported during the past year, chiefly to St. Louis and Philadelphia, where after a certain preparation they are canned and sold for green (unripe) peas.

The dairy and stock raising business is beginning to take the lead in some localities, and will eventually be the chief business of most farmers. The native grasses, June grass and white clover, flourish without seeding, often covering the ground with a thick coat which, by a system of top-dressing, will make superior pasture for a generation without being disturbed by the plow. The chief dependence for hay is timothy and red top on the low land, and timothy and red clover on the higher ground, the latter often freezes out, and the native grasses are inclined to occupy their place.

The stock of cattle is mostly the native, frequently graded with Durham, Devon or Ayrshire, while a few of pure blood may be found. The products of the dairy are 700,000 pounds of butter, finding a market at home, at Chicago and New York; 315,009 pounds of cheese. The cheese was made from about 900 cows, at an average of 350 pounds to the cow, an average

thought to be sufficiently low, as the milk from the best native cows will make from 400 to 600 pounds of cheese in 200 days. The fifteen or sixteen cheese factories are owned by men of enterprise and intelligence. They are yearly extending their business, and their facilities for manufacturing a superior article, which they intend shall compete with the finest products of the country. Already some of the best cheese arriving at Chicago is from this county.

The history of fruit-growing is one of discouragement and loss to the first settlers; although small fruits grow readily, apples, pears and plums were often a failure. This was owing in part to the rigor of the climate; to the raw, uncultivated condition of the soil; to the bark lice, that threatened at one time to destroy the apple trees; to want of knowledge in cultivating; but especially to want of varieties adapted to the climate. Although many farmers may have neglected the planting of fruit trees, yet the entire amount of apples raised the last year would exceed 30,000 bushels.

Manufactured goods, as well as agricultural products are increasing from year to year. The sum of farm products for the year 1869, is placed in the late census at about \$2,000,000. The value of manufactures for the present year would nearly reach that sum. The chief articles are flour, lumber wagons, furniture, leather, etc. Two woolen mills at Sheboygan Falls turn out about \$75,000 worth of woolen cloths, blankets, etc., yearly. There are twenty grist and flouring mills, supplied almost entirely with grain produced in the county. The market, aside from home demand, is New England and New York. Twelve thousand barrels of flour are annually sent from a single mill at the Falls, to Providence, Rhode Island.

Commerce, so nearly allied to agriculture and manufacture, possesses superior facilities at Sheboygan, where surplus products of this county, as well as much from adjoining counties, find an outlet. The completed railroad to Fond du Lac, and the harbor improved so that loaded vessels of the largest class may pass out and in without obstruction, has added much to the present and prospective importance of this city.

A court house has recently been built here at a cost of \$65,000, also several churches and numerous brick blocks, which together with the manufactories erected here recently, improve the aspect as well as the business of the place. When it is remembered that manufactories in the county are still in their infancy, that many of the numerous water powers on the streams are still unimproved or occupied by saw milis that must for want of timber soon give place to other machinery; that many articles now imported from the east may be made more cheaply here, both on account of a more ready access to the raw material and on account of living and building more cheaply, it is certain that manufactures and commerce will eventually continue to advance.

## VERNON COUNTY.

#### BY JOHN R. CASSON.

Vernon county is situated in the western part of the state; is bounded on the north by La Crosse and Monroe; on the east by Juneau and Sauk; on the south by Richland and Crawford; and its western border for twenty-two miles being watered by the Mississippi river.

The surface of the county is rolling, and in some places hilly. The soil is clay and black loam and covered with a heavy growth of hard wood timber.

The county contains 534,040 acres of land, one-third under cultivation; of the balance, about one-half is capable of being worked. In possession of bona fide holders, there are over 100,000 acres of land, worth in the neighborhood of ten dollars per acre. Neither the state or United States hold any lands of any consequence; and none are in the hands of any railroad corporation. Water facilities are good, especially on the Kickapoo, Baraboo and Bad Ax rivers.

The principal kinds of timber are maple, oak, basswood and elm. Plenty of game and fish are found in the forests and streams.

Our railroad facilities are only prospective. There is no county in the state that has equal advantages for stock raising and dairying purposes.

### TREMPEALEAU COUNTY.

The area of this county is about twenty townships. Of these only about 66,674 acres are improved. The soil is quite varied in its character; in some places, along the river bottom lands, there are patches where sand predominates, but much the greater portion of these lands are susceptible of cultivation and yield good crops. With this exception the soil is a rich, vegetable loam, underlaid with a clay subsoil. All the vegetables and cereals common to our state are easily raised here. Wheat, both winter and spring, is largely grown, and does well. The amount of our agricultural productions, as taken in the late census, is given as follows: Of wheat, 516,664 bushels; of oats, 246,196 bushels; of corn, 147,550 bushels; of rye, 10,130 bushels; of potatoes, 47,653 bushels; of butter, 341,068 pounds; of wool, 38,523 pounds.

The surface of the county is somewhat broken; along the courses of the rivers is generally a strip of level bottom land, varying in width; these usually terminate in sharp ridges or bluffs, with an undulating or rolling surface at the summit. These bluffs are composed of potsdam sandstone at the base, capped with magnesian limestone and vegetable loam. The sandstone is usually from 200 to 450 feet thick, while the limestone is from 20 to 50 feet.

The county is well watered. The Mississippi forms part of its southern boundary, and the Black, Buflalo and Trempealeau rivers, with their tributaries, pass through different sections of the county. Besides these we have the Beaver and Tamrack creeks, with trout brooks and innumerable springs of soft water.

Most of the streams are lined with belts of hard wood timber, consisting mainly of oak, maple, ash and basswood. On some of 6—Im. Com. (Doc. 14.)

the small creeks there are belts of tamarack. The balance of the timber is principally white and burr oak. In the northern portion of the county the timber is not abundant; in the southern and western part there is a good supply. The climate is dry and healthy. The temperature of our winters is cold yet even, with less snow than in some other portions of the state; it seldom thaws so as to be muddy, and is really warmer than in more southern latitudes. Much of this county is thinly settled, but as the land is cheap and of excellent quality, and the demand for farm products is great, we hope at no distant day to be able to compete with any of the older settled counties of the state.

# WALWORTH COUNTY.

BY DAVID WILLIAMS, DARIEN.

The past ten years have been quite eventful in modes, methods, character and profit of agriculture and the kindred arts in this county. While the past internecine war greatly changed the character of some of our political institutions, it did not fail to work many changes in agriculture and manufacture.

Of the varieties of crops raised in the county, there has been but little change in the past ten years. Wheat, corn and oats continue to be the leading crops. Broom corn is raised to a far greater extent than formerly; not less than five hundred tons of brush was raised last year. Hops have been raised to a considerable extent during the past three years, and has proved a losing crop. Sorghum, a quite popular crop from 1862 to 1866, has entirely disappeared from our fields. No new varieties of grain have come into popular favor in the past ten years, though a considerable effort has been made by interested parties to introduce the Norway or Ramsdale oat, at fabulous prices; but the only profit secured so far, has been bagged by the parties selling the seed.

In the manufacturing industries, there has been a marked im-

provement within the past decade. Ten years ago the manufactures of the county were limited to a few agricultural implements and flour, with a small amount of lumber sawn from the trees of our native forests. Last year our manufactories turned out articles of considerable over a million dollars in value, exclusive of flour and feed. The past decade has witnessed a very great improvement in farm buildings, and farm improvements generally. The old log houses have nearly all disappeared, and with them have gone the unsightly straw covered stables and graneries.

A marked improvement is noticeable in fruit raising. Our orchards have not only greatly increased in number and extent, but have improved in thrift and general appearance. The small fruits are also raised in vastly greater quantities. All hardy varieties of berries prove productive and profitable. Grapes are also raised to a considerable extent. In public buildings there has been a decided improvement during the past decade, especially in school buildings.

Hog raising and pork making have increased in a marked degree, and for the past ten years has given our farmers the fairest sum of net profit of any branch of industries. In this branch of industry there is the most radical and noticeable change. Up to 1860 a very large per cent. of pork raised in the county was slaughtered on the farm; now but a very small per cent. is, being mostly sold on foot and taken to the cities for slaughter.

The advent of cheese factories is having a noticeable effect on the stock of the county, or in producing a condition of things that will soon produce a marked effect on our stock of cattle. As with those farmers who produce milk for the factories, the character of their cows is of very little consequence, so they produce a large quantity of milk, their interest is so little effected by the quality, other than milk producing, that they have lost, or will scon lose, all desire of improving the quality of the stock of cattle. And it is believed that not as much interest is felt in improving the neat stock of the county as was manifest three years ago. Another reason is found in the fact, that, some of our improved stock-breeders seek perfection in form and beef producing

qualities, and in not a few stock of blooded cattle the milking qualities are bred out. And until our high bred stock-raisers shall have succeeded in producing a strain of stock with as good a reputation for milk as for beef producing qualities, there is but small hope that our farmers will be re-awakened to their former efforts to improve their stock of cattle.

In horses there is a noticeable improvement. The slender-shanked, nervous and vicious tempered descendent of some remotely connected thorough-bred English race horse, is not as popular as in days (it is to be hoped forever) gone by; and the heavy, strong limbed and kind tempered draught horse is by far more popular, and is more highly prized than formerly. We have a few farmers who do not think it either desirable or profitable to raise a class of horses so poorly qualified for farm labor as these slender, wee things are, merely to be able to drive to town at a two-forty gait.

A marked improvement is noticeable in the more diversified husbandry of the county. Few farmers are now exclusive graingrowers. On more than nine-tenths of the farms of the county more or less stock will be found growing. From 1862 to 1866 sheep were the favorite stock, and took precedence in value and importance of any, or all other stock. The past three years have greatly changed this condition, and to-day sheep are unpopular with our farmers, and have been sacrificed to a very great extent, and now the flocks of the county will not number one-half what they did in 186b; but other stocks has increased in numbers very considerably, expecially horses and milch cows. The working oxen have nearly disappeared from the fields of our farmers, and it is doubtful if there are as many young cattle as there were four years ago.

# WASHINGTON COUNTY.

BY F. A. NOLL, GEO. OTT AND G. L. ARNET.

Washington county contains twelve townships and is twenty-four miles long from north to south, and eighteen miles wide.

The general topography of the county is rolling. The soil is clay mixed with a sand loam. There are 276,480 acres of land in the county, about five-eights of this amount is under cultivavation. All lands of the county are in possession of actual settlers and worth on an average \$28 per acre. Our facilities for water are average. The Milwaukee river and the Cedar, and Rubicon creek with their tributaries, furnish abundant wates for general purposes.

Iron ore has been discovered in Hartford, but undeveloped. It is of the same quality as that at Iron Ridge, which will eventually be of great benefit to the industrial interests of our county and state. The prevailing timber is oak, maple, basswood, beach, elem, etc. Brickyards are carried on, but the brick are not of the first quality. In the southeast part of the county there is a quarry of fine building stone. Several streams traverse the county. A number of lakes are located within the county. The Milwaukee and La Crosse railroad passes through the county. Future railroad facilities are only prospective. The county is strictly agricultural. More than nine-thenths of the inhabitants follow agricultural pursuits.

### WAUKESHA COUNTY.

#### BY JOHN E. SEABOLD.

There are sixteen townships in the county, each of which is a square. County is situated directly west of Milwaukee, and its average distance is less than twenty-five miles from the city, its nearest being eight miles. The surface of the county is rolling. The soil is various, but mostly loam and clay. County contains 368,640 acres of land, more than one half being under cultivation. Of the balance three fourths are capable of improvement. Neither Government or State now hold any land in the county. There are several good water powers in the county, mostly improved. No mineral deposits have been discovered, but quarries of stone abound of the finest quality. Limestone enters largely

as commerce of several towns. The county is well watered with springs, creeks and rivers; none navigable. A mineral spring has recently been discovered at Waukesha, named Bethseda. It is said to have cured several chronic cases, and is becoming somewhat celebrated for its curative properties. Milwaukee and St. Paul and Milwaukee and Mississippi railroads run through the county. The educational interests of the county are generally sustained, and its common schools are well conducted.

## WAUPACA COUNTY.

### BY J. WAKEFIELD, FREMONT.

Waupaca county contains twenty-one townships and 756 square miles. The eastern and northeastern part of the county is heavily timbered, consisting of hard and soft maple, oak, birch, cherry, butternut, hickory, ash, elm, basswood, pine, tamarack, etc. The rest of the county is mainly oak openings; about three-fifths is timbered land. The surface of the county is gently undulating, except in a few places in the west and northwest, where it is somewhat broken by high hills and bluffs. The soil in the timber varies from a light sand on the pine ridges, to a stiff, tenacious clay. The sand, although light, can be kept in "heart" easily, and pays well for the trouble and expense of cultivation; corn, buckwheat, beans and potatoes do best on the light soils, while wheat, peas, oats and the grassess show a decidedly partiality for clay or a heavy loam. The openings are generally more sandy than the greatest share of the pine timber lands. Yet there is much excellent soil to be found there, dark, rich, and, in many places, quite tenacious, yielding the best of crops, and easily worked. Winter wheat seldom kills out, and much is raised; spring wheat also does remarkably well; no county in the state can beat ours, and but few equal it in the quality of that grain, although some excel us in the quantity on a given number of acres. Corn is a pretty sure crop. Even dent corn, which cannot be raised in the same latitude east, seldom fails here, and is the crop with us.

The cultivated grasses do well in the timber—better than in the openings; red clover thrives, and is getting to be extensively cultivated, not only for stock, but to turn under as a renovater of the soil. The wild grasses are very plenty, and very rich and nutricious, proving a great blessing to the hardy pioneer, who has to depend upon them for his stock to subsist on during the summer, and for his winter's supply of fodder.

Our woods are full of  $\varepsilon$  species of wild bean, which is eagerly sought after by stock. There is also a kind of wild pea, which grows on the uplands, much relished by stock. It is likewise very plenty in our natural meadows, in places, growing often three or four feet high, and making excellent hay. Although we cannot let our cattle run at large during the winter, and have them thrive on what forage they can pick up, yet, with proper care and generous treatment, the raising of stock can be made to. pay here, and pay well. But few pure bloods have been brought into our county, still, some of our most energetic farmers are doing something to improve the breeds. The "short horns" and their crosses appear to be the most popular, although some have introduced the Devons. In horses, we have little fine stock, although we have some that will compare favorably with those found in surrounding counties. We have some fine trotters. Sheep raising is still in its infancy. But it will yet become a profitable branch of husbandry in many parts of the county.

Although fruit raising has been much neglected, yet enough has been done to show that apples, pears, plums and cherries will do well here, and not only pay for their cultivation but may be made a remunerative crcp when raised for the market. There are in our county some fine orchards in bearing condition, and many more that in a short time will begin to pay back the trouble and expense bestowed upon them. Blackberries, red and black raspberries, strawberries, gooseberries, huckleberries and cranberries grow in wild profusion. Scarcely a marsh or a tamarack swamp is to be found where the cranberry has not obtained a footing. Thousands of bushels are gathered, and sent off to eastern and southern markets. Grapes may be successfully cul-

tivated, especially around our lakes, and along our larger streams; but it is a question if they can be generally raised for the market.

The Wolf river flows through the eastern part of the county. It is a large stream, navigable for steamboats at all stages of the water. The Little Wolf empties into the Wolf, and is valuable on account of its excellent water powers. So also, is the Embarrass, which empties into the Wolf at New London. The Waupaca river also possesses valuable water powers. The Pigeon river in the northern, and Little river in the southern part of the county, are both used for turning machinery.

The population of our county in 1860 was 8,850, now it has increased to about 15,500. A majority of our people are from the eastern and middle states, although we have a large foreign population in some towns.

While our winters are probably nearly as cold as in those places in the same latitude east, we have much less snow, in fact, often not enough for permanent good sleighing during the whole season. Vegetation starts rather late in the spring, but it is made up to us when it does get started. Things grow very rapid, and come to maturity early. Our summers are delightful; the air being bracing, healthy and invigorating. We have no febrile diseases; miasma is unknown.

There is much here to lure the immigrant in his journey west in search of a permanent home; our fertile soil, cheap lands, healthy climate, good water, our sober, intelligent population, our improvements and natural resources, our good markets, our schools, churches, all will tend to make Wisconsin one of the most desirable states of the great west, and make her counties rich and populous; among which not the most insignificant will be ranked Waupaca county.

### WAUSHARA COUNTY.

BY R. P. COLT.

Waushara county comprises eighteen towns and territory, and is in shape of a parallelogram, being eighteen miles wide and thirty-six miles long. General topography of the county is level; some bluffs in the northern and central towns; swampy at mouth of Pine river and Willow creek. The three eastern towns are heavily timbered, with the exception of some quite large tracks of marsh. These marshes are valuable for the cultivation of cranberries. The soil in the timber portions of the county, is of a clay loam. On the prairie, black loam, and in the openings, sandy. County contains 207,360 acres of land, one-tenth being under cultivation. Three-fourths of the balance is capable of cultivation. Actual settlers hold about 12,000 acres. The state owns quite a large tract in the eastern and northern portions. But little land is owned by the general Government, it having been turned over to the state, and the Fox River Im. provement Company. The county is well watered by Pine river and Willow creek, both good mill streams, on which are several saw and grist mills. In addition to these streams, almost every farmer has what he calls a fountain or flowing well, the water never freezing in the coldest weather in winter, and always sufficient to supply any amount of stock. The forests of the county contains all varieties of timber, such as are found in North America. We have large beds of clay, that make cream colored brick, and with the same facilities for manufacturing, would be equal to any manufactured in the state. Also potter's clay of excellent quality, which makes superior stone ware. Of the principal rivers and streams, Fox river on the south, Wolf river and lake Poygan on the east, are navigable; Pine river, Willow creek and Mecau river are larger streams, and stocked with fish. Small, game is abundant. Milwaukee and St. Paul Railroad at Berlin, is one-half mile from the south line of the county. Wisconsin Central Raiload is now building three miles from north line of county, and a route has been surveyed from Portage to Stevens Point, through western tier of counties. Climate considered as good as any in the state.

## WINNEBAGO COUNTY.

BY HON. R. J. JUDD, OSHKOSH.

Winnebago county contains sixteen townships of farming lands, and includes the city of Oshkosh, and the flourishing villages of Neenah, Menasha, Omro and Winneconne, besides several of less note. Lying on the west shore of lake Winnebago, and in the valleys of the Fox and Wolf, its surface is picturesque and beautiful, and its lands fertile. Its several lakes and rivers furnish some one hundred and fifty miles of navigable waters within its territories and on its borders. Lake Winnebago, at its two outlets, Neenah and Menasha, furnishes us unfailing water-power which cannot be excelled.

Its position is peculiarly fortunate. Situated on the great water thoroughfare between the lakes and the Mississippi, which is soon to be improved and enlarged by the General Government, it will receive its full share of the general benefits of this improvement, besides realizing some important local advantages. Winnebago is also the natural outlet of the Wolf river pineries. We receive and manufacture a large number of logs, and furnish the supplies to that region.

Its surface is gently rolling, presenting a pleasing variety of woodland, openings, prairie and native hay fields. There are no swamps, and its limited marshes admit of easy drainage and become our most valued lands. The two railroads which traverse this county, the Northwestern and the St. Paul' to which another is about to be added—the Oshkosh and Mississippi—together with its lakes and rivers, afford unusual facilities for cheap transportation and travel.

The soil is of a superior quality, embracing the deep black vegetable mould, marly loam, clay and sandy loam. The subsoil possesses that strong and active fertility which marks the decomposition of lime rock; and from any depth, when thrown to the surface and exposed to atmospheric action, supplies the growth of grasses, vegetables and plants. The lands are well watered. Artesian fountains abound, and are easily obtained.

The topography of the county indicates (what is found to be a fact) a healthy climate. The wheat produced is of a fine quality; the land and climate is suitable for corn, and full crops of these grains are usually obtained. The same may be said of all the other products of this latitude.

Improved breeds of cattle are being introduced, and the raising of stock and the production of butter, and cheese, especially, is receiving more attention than formerly.

The apple and the grape find a home here. Our apples have become noted at the state fairs for their excellence and variety. Many regarded as tender in other sections, are here successfully cultivated. The river valleys and lake borders seem also to make the climate especially congenial to the grape.

While Winnebago county has no inconsiderable quantity of hard woods, such as the oak, maple, elm, hickory, baswood, butternut, etc., in its native forests, its contiguity to the Wolf river pineries gives its settlers an abundance of pine lumber at their own doors at low prices.

But this county is mainly distinguished for its manufactures; which, last year, were valued at \$6,412,754, or nearly one thirteenth of the entire manufactured products of Wisconsin. Winnebago county is indebted to the older states of the east for the bulk of her original settlers, New York, New England and Ohio taking the lead. They brought with them their energy, economy and sagacity, their love of education, good morals and religion. The numerous schools and churches and other institutions of the county will attest how thoroughly they have illustrated in practice their ideas.

Cheap water communication connects Winnebago county with the great markets of the east. In addition to this the Wolf river pineries and the Lake Superior mining region draw largely on the resources of this county, and the prices obtained by farmers are several per cent higher than the average in ihe state.

## WOOD COUNTY.

#### BY L. P. POWERS.

Wood county is situated nearly in the geographical center of the state. About two-thtrds of the area of the county is rolling; the remaining one-third is flat and somewhat swampy.

The soil of the central and northern portion is a rich loam, containing a mixture of clay, sand and vegetable mould. The soil of the southern and eastern sections is lighter, containing more sand. In the southwestern portion are extensive marshes and meadows, peculiarly adapted to the culture of cranberries and stock raising. The county contains 530,000 acres of land, of which only about 30,000 acres are under cultivation; two-thirds of the balance is capable of being improved. The state owns 100,000 acres of land, which can be bought at from 50 cents to \$1.25 per acre. But little land is owned by the general government, subject to entry under the homestead law. Most of the government land on the odd numbers of sections is withdrawn from market for the benefit of the Wisconsin Central Railroad.

Large deposits of iron are known to exist, but their extent and value have not been tested.

Copper is found in large quantities; also "kaslin" or porcelain clay, pronounced by experts to be the best in the continent, is found in unlimited quanties.

About two-thirds of the surface of the county is a vast heavily timbered forest of white pine, white and red oak, white and black ash, maple, hemlock and butternut.

Good clay for the manufacture of brick is found in all localities of the county.

Good building stone of a sand-stone variety is abundant.

The Wisconsin and Yellow rivers, Mill creek and Hemlock creek run through the county.

The Green Bay and Lake Pepin Railroad, now in course of construction, will probably cross the county from east to west within two years. Both branches of the Wisconsin Central

Railroad are expected to pass through the county at no distant day. Other contemplated roads, it is thought, will intersect the county within a few years. When railroads reach the county, so that means of transportation are at hand, many new sources of industry will be opened.

Climate, mild; climatic and miasmatic diseases are almost unknown.

Wood county, in its soil, timber, minerals and water power, possesses advantages equal to any portion of the West. Lands are extremely cheap. Labor is always in demand, with remunerative return. There is ample home market for all agricultural products, and as a whole presents an inviting field to the immigrant, the laborer, the business man and the capitalist.

The water powers on the Wisconsin river in the eastern portion of the county at Grand Rapids, Centralia, Port Edwards and Point Basse are deemed equal to any in the country, not excepting the Falls of St. Anthony, or the rapids on the lower Fox. They consist of a series of rapids about twelve miles in extent, falling in the aggregate nearly one hundred feet, and furnishing a continuous chain of water powers on both sides of the river, of almost unlimited capacity.

The river can be improved at a trifling expense, in fact, it is already fitted by the hand of nature for extensive use, it being divided by islands into several channels, as it were natural canals, upon which mills can be erected and operated at very little cost for dams or other improvements.

At present there are situated upon these water powers five sawmills, having a capacity for cutting fifty million feet of lumber per annum, one flouring mill, one foundry and machine-shop, one planing mill and several shingle mills, and this without the digging of canals, cutting of channels or other expensive improvements.

It is the opinion of experts that a proper system of improvements, such as would readily suggest itself to a competent engineer, one hundred large mills could be run by the water power upon this river within the limits of the county, allowing ample room for each, and having an abundance of water at all seasons of the year.

There are also many smaller water powers in the county, situated upon Mill creek, Hemlock creek and Yellow river.

# STATISTICS.

The following information is taken from the very valuable report on agriculture, by Mr. J. W. Hoyt, modified with such additions in reference thereto as I have been able obtain from the most reliable sources:

#### POPULATION.

The first census in which Wisconsin figured was that of 1840, when, as a territory, it had a population of 30,945.

In 1850, two years after its admission into the Union, it had 305,391 inhabitants; having made a gain of 886.88 per cent. It then ranked the twenty-fifth state in point of population.

In 1860, it numbered 775,881 inhabitants, and took rank as the fifteenth state; the ratio of increase between 1850 and 1860 having been 154.06 per cent.

In 1870, it had reached a population of 1,055,559, the ratio of increase having been 36.06 per cent. Its present rank among the states is that of the fourteenth.

The distribution of the population by counties, and the increase made made by each, are presented in the following table:

TABLE showing the Papulation of Wiscoosin in the years 1850, 1860 and 1870, by counties.

TABLE showing the range of prices of Spring Wheat during the year 1870.

Monte.	No. 1.		No. 2.	
January February March April May June July August September October November December	8314 80 90 1.01 1.12 1.08 98 1.0014 9812	@\$\\.89\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\	\$0.75\(\frac{9}{4}\) @ 79\(\frac{1}{4}\) @ 77\(\frac{1}{4}\) @ 86\(\frac{1}{4}\) @ 99 @ 96\(\frac{1}{4}\) @ 92\(\frac{1}{4}\) @ 1.03 @	84 82¾ 94¼ 1.04¼ 1.25 1.35 1.27 1.13¾ 1.10¼

The average price of No. 1 for the whole year being a fraction over \$1.02 and of No. 2, 97 1-2 cents, and the proportion of No. 1 to No. 2, being as 42.7 to 49.4, according to the report of the Chamber of Commerce above quoted, we have a general average 7—Im. Com. (Doc. 14.)

of less than 99 cents per bushel for the wheat product of the whole state, provide the same had been delivered at Milwaukee. Deduct from this the cost of delivery at Milwaukee or any other market paying an equal price, and the price actually received by the farmers would probably fall below 90 cents. Multiply this by the average yield per acre (13.4), and you have \$12.06, as the total value at the home market, of the product of one acre of land devoted to wheat.

With these data, the wheat maniac will be able, by a simple estimate of the cost of plowing, seeding, harvesting and hauling to market, to arrive at the net profits of the business.

It is flattering to our pride that Wisconsin should thus early have placed herself in the very front rank of the wheat growing states; \$22,790,128.20 is a handsome sum of money, by itself considered, and it makes a fine showing in the aggregates of the productive industries of the state.

#### OATS.

The aggregate crops of 1859 and 1869, as shown by the United States census returns of 1860 and 1870, were

	predere.
Crop of 1859	11,059,260 20,180,016
<u>-</u>	

### THE BARLEY CROP

Of 1870 was one of the best ever produced in Wisconsin. Still this is not a crop much grown by our farmers, and the rate per cent. of increase has been very small within the past ten years.

The crop of 1860 was 963,201 bushels; that of 1869, according to the late census, but 1,065,019 bushels.

The price in 1870 did not rule so high as in 1869, when the crop was generally much poorer.

PRICES of Barley at Milwaukee in 1867, 1868, 1869 and 1870.

Months.	1867.	1868.	1869.	1870.
January Februa.y March April May June July August September October November December	1.25@1.30 1.25@1.30 1.30@1.40 1.40@1.45 1.40 1.20@1.30 1.25@1.30 1.20@1.30	1.70@2.15 1.95@2.30 1.45@2.30 2.35@2.55 2.10@2.65 1.50@2.10 1.28@1.50 1.38@1.81 1.00@1.80 1.15@1.95 1.20@1.85 1.25@1.80	1.55@1.75 1.70@2.00 1.65@2.05 1.55@2.10 1.60@1.85 1.25@2.55 1.10@1.55 1.15@1.35 1.10@1.45 95@1.27 85@1.15 85@1.15	60@1.00 75@1.05 50@ 90 44@ 85 45@ 95 50@1.00 45@1.07 90@1.10 67@1.02 65@ 90 65@ 90 65@ 85

#### INDIAN CORN

Is the great crop of America. In 1850, 1860 and 1870 its aggregates were more than twice as large as the total products of wheat, rye, barley, oats, buckwheat, peas and beans, in the United States.

	Dusnels.
Corn crop of the United States in 1850	592, 071, 104
Corn crop of the United States in 1860	838 792 740
Corn crop of the United States in 1870	1 100 000 000
Com crop of the officer beares in force	1, 100, 000, 000

In Wisconsin Indian corn has gained even more ground than in many other States, though we can never hope to rival Illinois.

Corn crop.	Bushels.
Of 1859	7, 517, 300
Of 1869	15, 037, 998
Rate per cent. of increase, nearly 100.	<del></del>

The average yield per acre has been estimated by the Agricultural Department at 38 bushels. If this be correct—and we do not think the figures too high—Wisconsin stands among the very foremost of the states, in point of yield.

The opinion prevailed for a time that, with the exception of the sothern tier of counties and the more favored counties further north, corn was not a safe crop in Wisconsin; or at least that none but the hardiest varieties could be relied on. Experience has shown that calculations based upon latitude merely were altogether erroneous—that, by reason of certain interesting and important peculiarities in the physical geography of our state, we are quite within the corn belt, and are able, with proper care, to produce good dent, and others of the more popular. though late-maturing varieries so extensively grown in Illinois, Indiana, and Ohio.

For the present we are obliged to place Ohio at the head, and let our reputation rest on the following very flattering figures.

Crop of 1870	Bushel	s per acre.
In Ohio In Wisconsin In Illinois In Minnesota In Iowa	• • • • • • •	38 35.2 33
	_	

The prices of corn at Milwaukee during 1870, ranged between 45 cents and 87 cents per bushel; the average for the year being 64 cents.

#### BEANS AND PEAS.

Have never been very extensively grown in the western states. The crops for the United States at date of the last two census-takings, previous to 1870, were as follows:

Crop of	Bushels.
1850	9,219,901
1860	19,001,830

The product of seven of the Western states in 1850 and 1860 was:

	1850.	1860.
Michigan Illinois Missouri Ohio. Wisconsin	82,814 46,017 60,168	165, 128 108, 028 107, 999 102, 511 99, 484
Indiana	35, 773	99,484 79,902 18,988

The Wisconsin crop of 1869, as reported by the United States officers, was 388,425 bushels—an increase of over 290 per centaince 1860.

Prices of white beans were considerably lower in 1870 than during the three years previous; the range being between \$1.00 and \$2.00 during the first quarter of the year, and between \$1.00 and \$1.50 per bushel for the remainder of the year.

White peas ranged between 85 and 95 for common, and between 90 and \$1.10 for choice.

### POTATOES.

The prices of potatoes in the Milwaukee market for the several months of 1871, were as follows:

Junuary. February. March April May June	45@ 60 50@ 65 40@ 58 85@ 45	September	80@ 80@ 1 70@ 65@	95 \ 10 \ 90 \ 90
June	60@\$1 00	Deceember	<b>70</b> @	85
-		-		

Sweet potatoes are grown very extensively in the southern states, but to a very limited extent in the north. The crop of the whole country has never yet (unless the last census should show such results) equaled two bushels per inhabitant; while the product of the southern states amounted, in 1860, to 4.16 bushels per capita.

The last three decennial crops in this state have been as follows:

Crop of	Bushels.
1850	879
1860	2,396
1870	2,220
•	

The sweet potato delights in a rather sandy soil, and in a few localities thus characterized some of our farmers annually produce handsome crops.

### TOBACCO.

The true habitat of this plant is farther south; the climate of the northern states being only adapted in general to the production of an inferior article, for smoking purposes. The increase of production in Wisconsin since 1850, is shown below:

Crop of	Lbs.
1850	1,268
1860	
1870	
_	<u> </u>

This increase of nearly one thousand per cent. since 1860, is so notable a fact that we have instituted more particular inquiries as to the localities where this growth of tobacco culture has been the most marked. So far as we have been able to learn, the larger proportion of the annual crop of the state is at present grown in Rock, Dane and Walworth counties; the largest business being done in the first named county, whose success is indicated by the following statement in the Milwaukee Sentinel:

"Last year the farmers of Rock county who reside in the vicinity of the village of Edgerton, raised and sold more than \$200,000 worth of tobacco, and this summer they have gone into its cultivation much more extensively than ever before. The average yield per acre is about 1,300 pounds; but the best fields produced 1,800 pounds, and netted the producers from It is estimated that the \$100 to \$250 per acre. crop this year (1871) which will be marketed in Edgerton, will be worth from \$300,000 to \$400,000. In other sections of the state, we hear of many farmers who are engaged in its cultivation, but to what extent we are unable to say. In regard to the quality of the Wisconsin weed, we may state that at the fair held at Cincinnati last season, some specimens sent from Rock county were considered superior to to any Kentucky grown article on exhibition,"

#### FLAX.

We are at the date of this writing without the census tables of 1870 for the county as a whole, and are therefore, without the data for a demonstration of the increased production between 1860 and 1870, which we feel sure was made in all the nothern states:

Crop of	Pounds.
Wisconsin in 1850	68, 393
Wisconsin in 1860	21,644
Wisconsin, census of 1870	497,398
•	

The product per acre in the west is from 1 to 3 tons of the straw, and 8 to 20 bushels of the seed, according to soil, seeding and cultivation.

The average price of the seed in Milwaukee and Chicago the past year was about \$1.80 per bushel.

### GRASS AND GRASS SEEDS.

It is an occasion for much regret and serious comment that Wisconsin farmers have not yet come to a proper realization of the importance of a more general and thorough cultivation of the grasses. The following figures will tell the story of our slow progress in this particular during the past ten years:

	<b>1860.</b>	1870.
Hay crop of Wisconsin, tons	855, 037	1,287,651
Grass seed, bushels	26,512	1,287,651 13,016
Clover seed, bushels		2,906

The profitableness of grass-seed growing with those who succeed may be judged from the following:

TABLE showing range of prices of Grass Seeds at Milwaukes in 1870.

Months.	Timothy, per bush.	Clover, per bush.
January February March April May June July August September October November December	3 50@ 4 25 3 75@ 5 50 5 25@ 6 75 5 00@ 6 75 5 00@ 6 00 5 00@ 7 00 4 00@ 4 50 8 75@ 5 15 8 50@ 4 50 8 50@ 5 50	\$8 00@\$9 00 8 50@ 9 50 8 50@ 9 75 8 50@11 50 10 00@11 50 10 00@10 50 10 50@11 00 6 00@11 50 5 00@ 7 4 75@ 6 5 00@ 6

#### FRUIT CULTURE.

The following statistical statement, derived from the census returns of 1850, 1860 and 1870, will show the ratio of progress made in this direction:

Value of orchard products in 1850	\$4,823
Value of orchard products in 1860	<b>78, 690</b>
Value of orchard products in 1865, (state census)	386,363
Value of orchard products in 1870	819,268

#### DOMESTIC ANIMALS.

There is evident in Wisconsin a growing appreciation of stock-raising as an essential element of good farming. It shows itself not so much perhaps in the increased number of domestic animals raised as in the constantly improving qualities of them.

TABLE showing the number of Domestic Animals in Wisconsin in the years 1850, 1860 and 1870, with total value thereof.

Animals.	1850.	1860.	1870.
Horses	80, 179	116, 180	252,019
Asses and Mules	156 64, 339	1,030 203,001	4, 135
Working Oxen	42,801	93, 652	<b>808, 377</b> 52, 615
Other cattle	76, 293	225, 207	331, 301
Sheep	124, 896	832,954	1,069,282
Swine	159,276	334, 055	512,777
Whole number of animals	407, 940	1, 306, 080	2, 530, 506
Value of all live stock	<b>\$</b> 4,897,385	\$17,807,375	<b>\$4</b> 5, 310, 882

From the foregoing figures, it will appear that, while the total number of domestic animals in 1870 exceeded the total number in 1860 by a fraction over 93 per cent., the value of them has increased in the ratio of over 154 per cent. Looking at the figures more narrowly, we observe the rate per cent. of increase in numbers was much the greatest in the case of sheep, to-wit:over 300 per cent., and since the sheep is an animal which represents the lowest amount of any in market value, it will be manifest

that the rate per cent. of increase in the value of stock, other than sheep, has been considerable greater than 154 per cent. Perhaps it would not be far from the mark to say of the horses and cattle of the state, that while they have increased in numbers at the rate of 48 per cent., their increase in value has been over 160 per cent.

TABLE

TABLE showing amount of Wool produced in Wisconsin and Iowa for 1850, 1860 and 1870.

Wool produced.	Wisconsin.	Iowa.
In 1850	2.011.9.3	373, 898 660, 858 4, 478, 934

It thus appears that over two millions of Iowa sheep, in 1868, yielded some four and a half millions of pounds of wool; while, in 1869, a million of Wisconsin sheep sheared four millions of pounds. A difference of one and a half pounds per head is so considerable that one only lacks a guarantee of the correctness of the figures to warrant him in drawing conclusions highly favorable to the wool-producing qualities of the sheep of this state.

The prices of wool at Milwaukee during the season of 1870, as given in report of Chamber of Commerce, were as follows:

PRICES of Wool at Milwaukee during the season of 1870.

Dates.	Common to extra, tub washed.	Medium to Fine Fleece.	Coarse Fleece.	Common to extra Pulled.

Estimated value of farm productions of the year		\$78,027,032

Leather manufacture has made rapid growth within the recent year. In 1860 the total product had a valuation of less than half a million of dollars. To-day it is not less than \$3,000,000 In this branch, Milwaukee, whose annual production has always been proportionally large, has made great advancement. On this

"Milwaukee has long been noted for the great extent of the hide and leather business carried on here, and this branch of our manufactures has been augmented during the past year by the erection in this city of the most complete and extensive leather manufactory to be found in any part of the country, the tannery of the Wisnonsin Leather Company, on the Kinnickinnick, in the Fifth ward. This establishment was completed in August last, and some idea of its extent may be got from the fact that the roofing of the various buildings covers an area of 56,625 square feet, or nearly one and a half acres. The beam house is 92 by 104 feet, and contains sixty large double vats. The yard is 280 by 64 feet, and contains two hundred and fifty double vats, equal to five hundred of the ordinary size. The grinding and leaching house is 232 feet long by 32 feet wide. The engine house is 52 by 35 feet, and contains the main engine and three boilers, each 26 feet long by 44 inches in diameter. This building has an iron roof and is wholly fire-proof. The chimney is one hundred feet high, and the only fuel used is the spent tan bark, which is burned wet as pitched from the leaches. The finishing building or currying shop is 204 feet by 70 and is two stories high, containing all the modern improvements for finishing leather. This building has attached an engine house, engine and boilers of its own. * * The receiving house is 44 by 80 feet, and one or two other smaller buildings with six bundred feet of improved dock line on the Kinnickinnick river, used for receiving tan bark, fuel and other heavy freight from vessels, completes the manufacturing part of the establishment.

"The tannery is devoted exclusively to the manufacture of upper and harness leather, and so is called by the trade an upper leather tannery. It is supposed to be the largest upper or harness leather tannery in this country, or in the world. It has not yet been worked to its average capacity, which is stated to be the tanning and finishing of about 7,000 hides per month, or 168,000 sides of leather per annum."

The following from the Milwaukee Sentinel, concerning the sole leather tannery of the same company, so full of interest as further illustrating the extent of leather manufacture conducted by Milwaukee men:

"The Wisconsin Leather Company has also a large sole-leather tannery at Two Rivers, in this state, which they continue. The tannery has 150 double vats, and is the largest sole-leather tannery in the West. They had a large upper leather tannery also at Two Rivers, which is now discontinued, and merged into the larger one built here. The trade of this company is very heavy, and extends through a large portion of the states. Hitherto they have been wholly unable to meet the demands upon them, often having orders two months ahead of their ability to fill them. Such is the character and reputation of their harness leather, of which they have made a specialty, that it is purchased from them by heavy saddlers in New York, Philadelphia and other eastern cities. And what may be a little remarkable in a western house, over 90 per cent. of their sales are to parties residing and doing business in the eastern and southern states.

"In addition to the works of the Wisconsin Leather Company, our city can boast of a number of other heavy establishments engaged in the manufacture of leather, all in a highly prosperous condition. The extensive establishment of Mr. Guido Pfister is probably as widely and favorably known as that of the Wisconsin Leather Company, though perhaps throughout different parts of the country. Two hundred thousand sides of leather would be a moderate estimate of this branch of our manufactures during the past year, with a prospect of a steady increase hereafter."

Iron manufactures are at present outrunning all others. The total value of products of this kind in 1860 was \$372,960. In 1869, as shown by the census of 1870, it had reached \$2,639,175, A very large proportion of this increase may be placed to the credit of the new Iron Company's establishment in Milwaukee.

A lengthy account of this company's work and operations was given in our report for 1869. But meantime so many improvements and additions have been made, that we gladly make room

for the following statements contained in the report of the Chamber of Commerce, to which reference has been made so often already:

"The Milwaukee Iron Company has been in operation but three wears, and has already become one of the most extensive manufacturing concerns in the northwest, and at the rate of progress it has has made thus far, it promises ere many years to become as extensive and complete as any other establishment of the kind in existence.

"During the past year the company have added a new puddling mill to their works, 80 by 230 feet, built in the most substantial manner, in which six single and seven double furnaces have been put in operation with room for four more, increasing the product of the mills three hundred tons of pig iron per week. The furnaces and machinery are of the very best description, as are all the machinery and appointments of these works. The company have also built a new blast furnace similar to the first one built by them a year ago. The two furnaces can make 30,000 tons of pig iron per annum. The rolling mill works have been largely increased, and are now turning out 2,400 tons of finished railroad iron per month. The immense freightage business of this company, and its prospective, as well as present importance to the carrying trade will be appreciated when it is known that during the past year, with its works yet incomplete, it received 37,544 tons of coal from Cleveland, Erie and Buffalo, 17,060 tons of ore from Lake Superior, 11,355 tons of ccke from Pennsylvania by rail, and 96,000 tons of iron ore by rail from Iron Ridge in this state. Of the latter, 67,700 tons were shipped mostly by lake, to Chicago, Wyandotte, Cleveland and Erie, 28,000 tons being used here.

"To facilitate the shipment of Wisconsin iron ore, now extensively used at Cieveland, Wyandotte and Chicago, the company has built upon their harbor frontage near the mouth of the Milwaukee river, an ore dock, or timber structure one hundred and sixty-one feet long, twenty-eight feet wide and forty-three feet high. having twenty-six bins or "pockets," as they are 8—Im. Com. (Doc. 14.)

called, lined with heavy plate iron, each capable of holding one hundred tons of ore. At the bottom of each of these pockets is a spout or shoot, through which the ore is discharged into the hold of a vessel, controlled by simple machinery above. The ore is brought by rail from the beds owned by this company at Iron Ridge, in cars constructed expressly for this purpose, and is conveyed to the top of the docks by means of an inclined plane, resting on eleven hundred feet of trestle work, and dumped directly into the pockets. A train of six cars, carrying ten tons each, is readily drawn up this incline by the company's locomotive. The latter, a first-class engine, is constantly employed at this work, and the transferring of material between the rolling mill and the docks, a distance of about half a mile. ny also have a substantial pier extending from their works directly into the bay, at which their supplies of coal and lake Superior ore are principally discharged, giving them very complete receiving and shipping facilities.

"Mr. J. J. Hagermann, the energetic business manager and secretary of the company, favors us with the following interesting particulars of operations during the past year:

"'MILWAUKEE, March 18, 1871.

# "W. J. LANGSON, Esq:

" Secretary Milwaukee Chamber of Commerce,

- "'DEAR SIR:—In reply to your note of 8th would say, we have received during 1870,
  - "'26,728 tons soft coal from Cleveland and Erie, by vessels.
  - "17,060 tons iron ore from lake Superior, by vessels.
  - "'10,816 tons anthracite coal from Buffalo, by vessels.
  - "'11,355 tons of coke by rail from Philadelphia.
  - ", 7,780 tons limestone frome Racine.
- "'95,000 tons of iron ore were received over the St. Paul Railway, from Iron Ridge. Of this 28,000 tons were used here, and 67,700 tons shipped.
- "'In 1870 we made 16,248 tons railroad iron. Of this 4,875 tons was re-rolling, and balance new iron.
  - ""'No. 1 Blast Furnace was put in blast, April 16, 1870. From

that time until December 31, (38 weeks) it made 12,830 tons of pig iron. All this was used here, excepting 3,763 tons shipped to Wyandotte.

"'During the past year the works of this company have been very much extended, and we are now turning out 2,400 tons of rails per month. No. 2 Blast Furnace is nearly ready to "blow in," and the two can easily make 30,000 tons of pig iron per annum. During 1870 this company has paid out for labor at the mills and docks \$413,673.15. If to this you add the money paid for railroad and vessel freights, foundry work, lumber, stone, brick, lime and other materials, you can form some idea of the money put in circulation by our manufacturing concern. The above figures do not include payments for labor at Iron Ridge amounting to about \$12,000 per month.

"'Yours, &c.,

1

1

## "'JAS. J. HAGERMAN.'"

Wagons and carriages are also manufactured on a scale that entitles them to special attention. Racine and Kenosha still hold the supremacy. In these two counties, the amount of capital invested, the cost of material used and the value of the wagons and carriages manufactured in 1780, were as follows:

	Racine.	Kenosha.
Capital invested	174, 821	\$121,100 145,607 340,740

The amount of capital invested in the business in all parts of the state is reported at \$1,144,215; expenditures for material, \$862,493; value of product, \$2,720,463.

Woolen factories have increased in number since 1860, from eleven to forty-eight; in amount of work done, in about the same rates.

	1860.	1870.
Capital employed in woolen mills	<b>\$</b> 100,600	<b>\$1,235,089</b>
Value of wool used	85, 743	557, 820
Number of hands employed	105	577
No. pounds of yarn reported*		56,000
No. pairs blankets reported*		7,750
No. yards of cloth reported*		1,009,949
Total value of products	172,720	1,094,858

The wooden and willow-ware business, though less in magnitude, may be properly mentioned in this connection. The manufacture of wooden-ware, such as baled boxes, bowls, pails, etc., is most of it done at Neenah and Menasha, Depere and Green Bay; the total value of the product in Winnebago and Brown counties being:

Winnebago county\$192,	<b>300</b>
Brown county	840

Stated more in detail, the factories at three places named are reported as follows:

	Menasha.	Depere.	Green Bay.
Capital invested	<b>\$</b> 125,000	\$20,000	<b>\$140,000</b>
Expenditures for material, 1870	•	•	• • • • • • •
Hands employed	200	40	
Paid for labor	82,500		
Value of product	192,550	37, 840	14, 000

The articles manufactured at Menasha in 1870, were:

Pails	240,000
Wash tubs	60,000
Wash boards	12,000
Measures	6,000
Churns	14, 000
Covers	18,000
Fish kits	95,000
Butter tubs	50,000
Kulers	10,000
Bannakins	50,000
Broom handles	80,000
Cloths pins	3,000,000

The manufactures at Depere were: butter tubs, 31,707; fish kits, 74,950; oak pails, 9,004.

TABULAR statement of the capital invested, expenditures made and proceeds realized in general leading branches of Wisconsin Manufactures.

Articles Manufactured.	Capital Invested.	Paid for Material.	Value of Product.
Flour	<b>\$</b> 6,458,042	<b>\$</b> 13,939,584	<b>\$17,</b> 580, 648
Lumber	11,659,765	7, 268, 204	<b>14</b> , 550, 653
Leather manufactures	1,423,868	1,409,083	2, 956, 585
Machinery, castings, etc	1, 682, 124	1, 045, 261	2, 639, 175
Agricultural implements	1,822,925	902, 232	2,890,437
Wagons and carriages	1, 144, 215	862, 493	2, 720, 463
Beer	2,283,400	991,560	2, 329, 572
Leather	914, 700	1,301,821	1,923,898
Lead		536,522	1,019,962
Woolens	1, 235, 089	557, 820	1,094,858

But even the above really magnificent totals for a state so young as Wisconsin, do not represent more than about half the amount of manufacturing actually done by us. The exact amount could not be reported were it certain that the figures actually returned were entirely accurate for the reason that the census excludes all little shops, whose produce fall short of \$500 per annum. Nevertheless the footings of the census are such as to awaken a feeling of pride in the breast of every citizen who has an interest in the general welfare.

The total value of our manufactures in 1860, was \$27,849,467. In 1868 we surprised not a few of even our most sanguine citizen by the estimate. in the report of that year that they had reached a total value of \$40,000,000. And yet but two years later we have the authority of the census bureau for the ann uncement of \$85,624,966, as the present actual total.

Assuming that it will be interesting to know the relative progress of the several counties of the state in this department of industry, we present herewith:

TABLE showing the number of establishments, the number of hands employed, and the value of the products of the manufactories in each of the counties, in 1860 and 1870, respectively.

Ashland   15	Counties.	Number lishme ducing \$500 we	ntspro- over	Number	of Hands.	Value of	Products.

The receipts of iron ore at Milwaukee, since the establishment of the Milwaukee Iron Company's Works, are worthy of notice, as indicating the progress of that company's business:

Tons of iron ore received at Milwaukee in 1868	
dododo1869	7,024
dododo 1870	112,060

The receipts of pig iron in 1870 were 11,903; amount manufactured at Milwaukee, 12,830; total, 24,733.

The shipments of pig iron from Milwaukee during the past five years have been as follows:

Total shipments in 1866, tonsdo1867do	4, 445
	4, 108
do1868do	6, 861
do1869do	
do1870do	8, 216

Amount of railroad iron received in Milwaukee during 1870 28,553 tons.

## COMMUNICATIONS.

### FROM JOHN MURRISH, STATE GEOLOGIST.

The mineral resources of the state of Wisconsin, so far as they are known and partially developed, are found in its southern portion, forming an ore district that includes the counties of Iowa, Grant, La Fayette and parts of Green and Dane.

The strata of this ore district, so far as exposed by mining, are 1st. A bed of limestone, known locally as the Galena limestone, but chemically as a Dolomite or magnesian limestone. It is about 250 or 300 feet thick, and overlies a bed of compact fossilferous limestone, known locally as the blue limestone, but in its geological order as the Trenton limestone. These strata are of the lower Silurian age, and comparatively undisturbed by either plutonic, or metamorphic action.

The fissures traversing these strata, are not what is called true fissure veins, such as we find in crystalline rocks of plutonic, or metamorphic origin, but fissures peculiar to this class of strata, as is now demonstrated in similar lead and zinc districts, found in different parts of the world.

These fissures traversing the Galena limestone are usually vertical, or nearly so. The ore is found generally where the fissure has been widened by decomposition, and is called by the miners a crevice opening. This decomposition usually takes place-beneath a harder portion of the rock, as though greater resistance had been offered here to mechanical forces acting from below, and a gentle lifting of the strata had taken place along the line of the fissure. As an evidence of this, we always find beneath this cap rock (as it is called by the miners) a seam extending horizontally away from the sides of the opening, marking dis-

tinctly the place where the solvents entered from the fissures beneath this cap rock. As a consequence of this, we find the openings along the same range of fissures, and in the same locality, in the same horizontal plane.

The larger deposits, however, are oftener found where the rock has been decomposed between two, or more fissures running parallel to each other. In such openings we find large pieces of partially decomposed rock, mixed with clay and sandy material, the results of decomposition.

The material in these openings is not a disorderly, incoherent mass, but is arranged mechanically and chemically under some general law peculiar to this form of deposits.

The finer, softer material such as clay, is arranged along certain lines, while the carbonate of lime dissolved out of these rocks, is re-deposited in the form of calcareous spar, to form with the finer part of this clay, a matrix in which these ores are deposited.

In such openings, it looks as though the medium in which, and through which these solvents or dissolving agencies acted, furnished also, the solutions from which these ores were formed, as though nature first prepared the place, and then deposited her treasure.

These openings vary from five to forty feet wide, from ten to fifty feet in depth, and continue from one hundred to several hundred feet in length, and yield often from one to five million pounds of ore.

At first it was supposed that where these openings closed in depth, was the extent in vertical range of our ore deposits, but subsequent mining has shown that they succeed each other in the downward course of the fissures, and now not only the second, but the third, and in some places the fourth opening in depth has been discovered, and the fissures continue their downward course as before.

In the lower portion of the Galena limestone, these fissures become more irregular in their course, resembling in many places, a flight of stairs; ore deposits found in connection with this form of fissures, are called by the miners, flats and pitches. Where these

fissures enter the blue limestone, the ore deposits are found between the different beds of the strata, and are called flat openings. Here the ore deposits assume a different, although somewhat similar form, and come much nearer to that of a true fissure vein. The ore is formed beneath a cap-rock, a very hard, compact rock, forming a surface over the ore very similar to the hanging wall of a vein. Beneath this cap-rock we find an aggregation of mineral matter, such as galena, blende, calamine, pyrites, calc and heavy spar, chemically deposited, and arranged as in a true fissure vein. If these strata were tilted up to almost a perpendicular position, but few would be able to distinguish between this form of deposits, and the forms of deposit in the true fissure These flat openings are important forms of ore deposits; they sometimes extend to two or three hundred feet in width, and from one half to a mile in length, along the course of the fissures; indeed, in length they seldom give out or become exhausted of all the minerals. The lead may be replaced by zinc, or iron pyrites, or spar, so as not to pay expenses, but as a vein it continues, though poor.

A good example of this form is found at the Linden mines, in Iowa county. It commenced there in the lower portion of the galena limestone, in what is called flats, and pitches. From thence it extended down into the blue limestone; spread in broad horizontal sheets of ore (or what might be called veins) for several hundred feet wide, and has been worked continuously for near a mile in length. This mine has yielded not less than twelve million pounds of lead ore, and several million pounds of zinc ore, and, if owned by an enterprising company, and drained by a level or adit to its present depth, would no doubt yield millions more, and give employment to a great number of men for many years to come. The zinc deposits, although forming a part of the same vein with the lead, are confined mostly to the blue limestone, extending up only occasionally into the lower portion of From discoveries recently made, it is evithe galena limestone. dent that these zinc deposits are the richest in the lower portion of this formation; examples of this are furnished us in the mines that are now being worked at Highland and Centerville, in Iowa

ļ

county. In these mines we find galena, blende, and calamine, uniting to form the same vein, sometimes one, sometimes the other predominating.

There are places, however, where the calamine is separated from the galena and blende, and formed into large bodies of itself, in beds from two to three feet thick. I speak advisedly, when I say that there is zinc ore enough already discovered in the towns of Highland and Blue River, (if proper encouragement was given to mining there), to furnish material for one zinc factory of large capacity, for many years to come. From the fact that zinc deposits are found in the blue limestone, and confined mostly to this portion of the strata, but few of those deposits have been reached by our present system of mining-certainly not one mine in ten has been worked down to this formation. But if, when those mines that have been so productive in lead in the galena limestone, are worked down to this rock, it will prove to be as productive of lead and zinc, as it is in those mines that have already reached it, (and there is certainly no reason why this may not be the case), then the undeveloped mineral resources of this part of our state, even if the fissures extend down no farther, will be as great, or greater, than what we have already developed. The question here, is, not so much the chances of undeveloped mineral resources below our present mines, as it is the best system of developing them. This lead and zinc district of Wisconsin, in the character of its rocks, systems of fissures, and ore deposits, resemble very much the lead and zinc districts of other parts of the world; such as the Derbyshire, and Cumberland, in England; Pallieres, near Anduze, in France; Wiesloch, in Baden; Sentander, in Spain; the celebrated lead and zinc mines of Upper Silesia, Aix-la-Chapelle, Westphalia, and a host of other such like ore districts, from which the commercial demands of the world have drawn their supplies for centuries.

These stratified limestone ore districts, found scattered so widely over the face of the earth, may have local differences, but they are unquestionably the results of the same, or similar physical conditions, and may be regarded as having one common

origin; and from the history of those districts that have been worked through alternate periods of poverty and richness for centuries, we may learn much in reference to the future productions of our own. The fissures of this ore district, although differing in some respects from the fissures found in plutonic and metamorphic rock, resemble them closely in others. In no mining region do we find more regularity in the bearing of the fissures, or in their conformity to polar lines, called ranges, which ranges also group together in belts of well defined bearing. In this district, which includes an area of over two thousand square miles, we have four distinct belts of mineral land, parallel to each other, with about the same eastern and western extension. It has lately been discovered, and now pretty well substantiated by close observation, that these east and west belts, along which the mines of this district are found, and to which they are confined are crossing an axis of slight elevation, running north and south, the centre of which is about the middle of the district. And furthermore, it is evident that these belts, as a general thing, become less productive as the distance from this centre increases.

This fact has led to a close examination of the region to the north of this district, along the line of its axis, and the result is the discovering of another belt. This belt is on the north side of that elevation running from Blue Mounds to Prairie du Chien, and is parallel to those in the lead district, with the same distance from them that they are from each other. It occupies, however, the sandstone portion of the strata that underlies the limestones of the lead district, and consequently presents new forms of deposit. So far as we can judge from surface appearances, the mineral wealth of this belt will consist mainly in the large and rich deposits of the oxide of iron that it seems to contain throughout its entire length. This iron ore is found here in almost every form of character. The most important, however, that we have noticed thus far, are those that can be readily manufactured into paint. In some places we find large beds of very impure argillaceous or slaty iron ore, affording, however, in places, good specimens of purer varieties. This variety decomposes readily into a reddish brown clay, in which we sometimes find beds of ochre, varying from a few inches in thickness to to several feet. In these beds of ochre we sometimes meet with separate and distinct colors of brown, reddish brown and bright red, all of which can be manufactured into material for paint at trifling expense.

Another, and I think the most important form in which this oxide of iron is found, is that of a bright red powder, impregnating a siliceous sand-stone. It is not chemically deposited in the sand-stone, that is, it has not a crystalline texture, but is easily separated from the sand by washing it in water. This sand-stone, where it is found abundantly, is very friable and easily reduced to its original grains, and when placed in water and stirred, the water takes up the oxide readily and allows it to settle readily when undisturbed. When separated in this way and dried, it is a fine red powder, as fine as the oxide of zinc; and when mixed with or ground in oil, it will make paint of a brilliant red color, that will make as fine a finish on wood, as either zinc or lead. As a pigment this material is superior to anything we call ochre, or mineral paint, and if its durability should prove to be, when tested by time, what it appears to be under experiment, it cannot fail to be valuable, for it will take the place of lead and zinc paint for all out-door work. If it will do this, and can be furnished for one-fourth of the cost of lead, it must certainly be as valuable to the state eventually as the lead itself.

The out cropping of these deposits have been discovered along a belt of land fifty-five miles east and west, and from four to six miles wide, with prospects of being as valuable as though it had been another belt along which deposits of lead and zinc were found similar to those already referred to, consequently will add nearly three hundred square miles to the ore district of southern Wisconsin. Since attention was first called to this discovery, in July last, a company has been formed to manufacture these ochres, at Blue River, and have their factory now in working order; and have, I understand, several hundred tons of this material on hand. Other parties, I am informed, are making arrange-

ments to go into similar operations next spring. Farther east on this belt I have no doubt that an important branch of industry will spring up in connection with this, that will employ a great many men, and be a source of profit to the state and all concerned.

The arrangement of these ore deposits into belts parallel to each other, and at right angles to an axis of elevation extending far beyond them, establishes beyond all doubt their geological relation to physical forces and conditions acting from below, and is a standing, open rebuke to the theory that they are mere surface deposits produced by atmospheric or some other conditions acting from above.

And the fact that these things have not been known till within the past few months, is an evidence that we know even now, but very little of the nature and extent of our mineral resources, either in depth or superficial area.

If this north and south axis of elevation is the physical basis of this ore district, and should extend north through the entire state (as we have good reasons to suppose it does), then it is possible, indeed very probable, that other, and perhaps more important ore districts will be found along this 235 miles of unexplored country that lies between this ore district in the south part of the state and the south shore of Lake Superior on the north.

But five States in the Union present better indications of extensive and varied mineral resources, which will no doubt, when understood and made known, become the basis of important branches of industry, that will add very much to the wealth and population of our State. But until some systematic effort is made by the State to obtain correct information on these things, and to make it known to the public, they will remain what they are, the undeveloped, unexplored, unknown mineral resources of Wisconsin.

JOHN MURRISH,

Commissioner of the Survey of the Lead District.

#### COMMUNICATION FROM TAYLOR & BACH.

CARLTON, Kewaunee Co., Wis., Jan. 27, 1872.

Col. O. C. Johnson,

Commissioner Inmigration,
Milwaukee, Wisconsin:

DEAR SIR.—We notice in the Western Farmer that you request all those who are in need of laborers, and those having land to sell within this state, to notify you of the fact, together with such information as would give you an idea of such matters, and we take the liberty of addressing you on this subject. We are located on the lake shore, five miles south of Kewaunee. During the last season of navigation we shipped from a pier of which we are owners, seventy-eight cargos of merchandise.

In connection with our mercantile trade we own 3,400 acres of land which was selected by the original owners in 1855, before the county were settled, and entered at government price, the title coming to us direct, which we are desirous of disposing of in small farms to suit purchasers. The county is principally settled by Germans and Bohemians, though all nationalities are more or less represented. In regard to wages and work, we can say that we never have seen the time for years that we could get all the help we needed. We employ from fifteen to twenty hands at an average price of thirty dollars per month. Nearly all kinds of employment with remunerative return is open for those willing to work.

To immigrants that want homes, say to them to come here with the idea that they want to work, and we will warrant them a comfortable competency in a few years. We prefer cettlers with but little means, rather than those with pretensions and a large amount of money; plenty of muscle, an honest heart and a good brain are qualities we prefer.

This is no place for saloon keepers, and those who would profit by feeding the appetites and passions of their fellow men. Our lands are for sale on time, one-third down, and the balance in yearly payments, to be paid with produce if preferred. We give a bond for a deed, and a warranty deed when the amount is liquidated. It has been our established custom, not to exact any forfeiture when a party fails to meet an obligation, providing such parties have shown a disposition to be honorable. For a man with a family and small capital who is desirous of making himself a home by frugality and industry, this place cannot be surpassed in the State. Our senior partner, Mr. J. V. Taylor, can be found at No. 260 South Water street, Chicago, and would be pleased to furnish any information.

Most respectfully,

TAYLOR & BACH.

#### COMMUNICATION FROM R. P. COLT.

Poysippi, Waushara Co., Jan. 12, 1872.

Col. O. C. Johnson,

Commissioner Immigration,
Milwaukee, Wisconsin:

DEAR SIR: In response to an invitation I have noticed in the papers, permit me to say that this county, and particularly the eastern portion thereof, furnishes inducements to immigrants scarcely to be excelled in this state.

The vacant land of a desirable quality for farms is all taken, but there is a quantity of good timber land in the eastern towns of this county offered for sale very low, and plenty of opening land in the central and western towns, cheap. The town north of this is mainly settled by Germans, with a few Danes.

The soil is as good in the eastern part of the county as any in the state, the timber being oak, bass, elm, hickory, maple, ash, etc. Springs are abundant, and water excellent.

I being in mercantile business at the village of the same name with the town, and town clerk and postmaster, have an extensive

acquaintance with the surrounding country, and will be glad to assist immigrants to the extent of my power in securing homes.

I have the honor to be very respectfully,

R. P. COLT.

#### COMMUNICATION FROM O. R. DAHL.

Томан, Jan. 20, 1872.

Col. O. C. Johnson,

Commissoner Immigration,
Milwaukee.

DEAR SIE:—Your favor of the 16th inst., at hand. A few days ago, I returned from the northwestern part of the State, and I am fully confirmed in the opinion heretofore entertained, that greater effort and a more systematic plan than has existed, should have been established, before this late day. The present immigration bureau, faithfully and practically carried out, must prove of incalculable benefit. Our sister States, many of them, have already discovered the fact and importance of largely appropriating money and means for attracting the foreigner to come and settle in their midst.

It is to be regretted that the past few years has seen the boasted progress of Wisconsin dropping behind in this respect and merely becoming a highway over which immigration has traveled, from the fact that other and more attractive and alluring fields are held open by those who have taken advantage of our seeming reluctance and penurious policy in this direction; not that our broad state does not possess all the vast prairies and rich timbered lands, with every other munificent gift of nature such as found elsewhere in the more western states; but that our state through its representatives has failed to see and the public sentiment demand or rather appreciate the extended wealth that would inure to us if greater inducements were held out to the immigrant to remain within the boundaries of our state, instead of pushing across the line. While we admit that good land is found through-

ont nearly every portion of our domain, yet the extravagant statement of many railroad corporations, who hold large tracts and grants of land, with a desire to sell at a high figure, are continually deceiving the immigrant, by over-estimated facts and cunningly devised statements.

The wonderful resources of Northern Minnesota, and the tracts of land along the North Pacific Railroad, while given with the hope and we suppose belief of truth, still to one who has visited the line of road, it must at once seem improbable that such statements could be set forth as real facts. We believe our own state yet possesses as good land unsettled as can be found, and from personal knowledge we give the following, relative to several counties in the northwestern part of the state, which is now but sparsely settled:

The east part of St. Croix, the east two-thirds of Polk and the west part of Barron county are almost unsettled; the soil is a heavy black loam; timber, maple, aspen, oak, elm and white pine. These counties are all well watered by lakes and large and small streams. About one-third of the lands are entered for pine; the balance can be settled as homesteads, or entered at one dollar and twenty-five cents to two dollars and fifty cents per acre.

To parties who are desirous of exploring the country, we would advise them to go to St. Croix Falls, where the land office is located, and make the acquaintance of Mr. Young, who is a man well acquainted in the locality in which he resides; he will give any information, and show land to parties wishing to make purchases. We would recommend him to whom you might send, for full instructions concerning a county committee, for the several counties already mentioned.

Yours truly,

O. R. DAHL.
